ECHO I
£99.95*
ECHOSOUND
£49.95*
ECHOKIT
£4.95*

LVL's ECHO I is a high quality 3 octave keyboard of 37 full sized keys operating electronically through gold plated contacts. The keyboard which is directly connected to the user port of the computer does not require an independent power supply unit.

The **ECHOSOFT** Programme "Organ Master" written for either the BBC Model 'B' or the Commodore 64 supplied with the keyboard allows these computers to be used as real time synthesizers with full control of the sound envelopes. The pitch and duration of the sound envelope can be changed whilst playing, and the programme allows the user to create and allocate his own sounds to four pre-defined keys.

Additional programmes in the **ECHOSOFT** Series are in the course of preparation and will be released shortly.

Other products in the range available from your LVL Dealer are our:

ECHOKIT (£4.95)* - External Speaker Adaptor Kit, allows your Commodore or BBC Micro-computer to have an external sound output socket allowing the **ECHOSOUND** Speaker amplifier to be connected.

ECHOSOUND (£49.95)* - A high quality speaker amplifier with a 6" dual cone speaker and a full 6 watt output will fill your room with sound. The sound frequency control allows the tone of the sound output to be changed.

Both of the above have been specifically designed to operate with the **ECHO** Series keyboard.

The **ECHO PRODUCT FAMILY** breaks both the **SOUND** and **PRICE BARRIERS**, representing outstanding quality and value for money.

Notes for authors

Acorn User welcomes submissions from readers. Articles should be typed, double-spaced text with diagrams and screen dumps on separate sheets, or on disc in *Wordwise* (saved as a *SPOOL file using option 8) or *Viewformat*. Leave large margins to allow space for editing. Please enclose all programs on disc or cassette, with listings if possible. Also follow the style used in presenting listings in the yellow pages section. Photos should be 35mm, or larger, transparencies, or 5in by 7in

black and white prints. Ensure your name is on everything, and keep a copy. Enclose a suitable stamped, addressed envelope if the submission is to be returned. Attach a short letter with the article giving its title with a day time phone number if possible. Address your article to the Technical editor. Articles are acknowledged on receipt, but not submissions for the regular columns, letters pages and competitions. Please limit telephone enquiries to the Technical editor to Wednesday and Thursday afternoons.

Oxford Pascal is Fast

Oxford Pascal compiles down to FAST COMPACT P-code, giving you the real speed and power of Pascal, together with the ability to compile very large programs.

Oxford Pascal is Standard

Oxford Pascal is a full extended implementation of Standard ISO Pascal. This means that you can compile any Pascal program (subject to size), written on any computer, anywhere.

Oxford Pascal is Compact

Because it compiles into P-code, Oxford Pascal reduces programs into the most compact form possible. In fact it allows you to pack more code into your BEEB than any other language, and should your programs become too large, you can still use the CHAIN command to overlay limitless additional programs without losing data.

Graphics & Sound Extensions

In addition to the entire Pascal language, Oxford Pascal features a whole range of Graphics (all modes) and sound extensions designed to make maximum use of the BBC computer. Oxford Pascal also provides numerous extensions such as hexadecimal arithmetic and bit manipulation instructions.

Oxford Pascal in Education

In Education, Oxford Pascal is fast becoming a *de facto* standard. It is already the most popular Pascal on the Commodore 64, and will soon be released for the Spectrum and the Amstrad. In fact, Oxford Pascal will soon be available for 90% of the computers installed in the U.K., and is already available in German, French, Swedish, and American versions. Students and teachers alike find that it makes sense to use a standard implementation of Pascal across the whole range of educational micros. Call us for details of our generous educational discounts.

Resident and Disc Compiler

Oxford Pascal comes in two forms:

For Tape Users... Oxford Resident Pascal a compiler located largely in ROM which is available at any time. Programs can be written and compiled on the spot without disc or tape access, and compilation is fast enough to make using the compiler much like using the BASIC interpreter. Thus, learning Pascal is a simple interactive process. Some 15K of memory is available for user programs, the remainder being reserved for compiled object code.

For Disc Users... Oxford Disc Pascal offers all the above PLUS...a full disc compiler which is capable of using the WHOLE memory for Pascal object code, it is supplied with a powerful LINKER, allowing you to break large programming tasks down into separately compilable, easily-manageable files.

Manual

Both these compilers come with a manual which has been carefully designed, not only as a quick reference guide, but also as a full tutorial for those new to Pascal.

Friendly Error Messages

Many compilers produce little more than an error and line number to help correct mistakes in Pascal programs.

Oxford Pascal however, gives you one of 49 friendly and informative error messages, messages which not only indicate the reason for an error, but also print out the line in question with a pointer to the exact position where the error was detected. Run-time errors are reported using line-numbers from the original source-program with a full explanation of how the error occurred.

Powerful Editor

With Oxford Pascal there is no need for you to learn how to use a new Editor. Pascal programs can be entered in exactly the same way as BASIC programs, without the need to learn any new commands. When you are used to using Pascal, you will find our extensions to the Standard Editor even more useful. What is more, Oxford Pascal allows you to mix BASIC and Pascal together, in much the same way that you can mix BASIC and assembler. In fact you can, if required, mix all three together...BASIC, Pascal and assembler...in one program.

Stand Alone Code

Unlike other compilers, Oxford Disc Pascal allows you to compile on the BBC and then relocate your program so that it will run on the BBC and on the Electron. The relocated program will run without a Pascal ROM and can be loaded and run from tape or disc just like any other program.

This means that you can distribute or sell your software freely and without the need for ROMs, to run on either of the above machines.

Oxford Compilers — The Future

During the next year, we at Oxford will be releasing a series of language implementations such as C, and Modula 2, for the BBC, and other popular micros.

These compilers are being built, using the most modern techniques in automated compiler construction, and will bring to the micro-user, a level of robustness and efficiency, only now becoming available to mini and mainframe users.

NOW
PROGRAMMING

YOUR HOME
COMPUTER

IS AS EASY

AS READING
THIS.

Let's face it, most 'beginner's guides' are anything but easy reading.

Now Dorling Kindersley have come up with a new way of learning BASIC that's unique, simple and down-to-earth.

It's called 'Screen Shot'.

Unlike ordinary guides, Screen Shot uses full-colour photographs of real computer screens to show instructions, program listings and displays.

So what you see on the screen in the book is precisely what you'll see on your own computer screen.

Which makes our programs easy to understand, easy to read and free from misprints or other sources of confusion.

The accompanying explanations are clear, practical and are written by experts.

You'll find there are Screen Shots for most popular makes of home micro.

Books 1 and 2 of each series form a complete guide to BASIC programming for that computer.

For the more adventurous programmer, Books 3 and 4 explore the creative world of computer graphics.

In the words of a reviewer in 'Big K' magazine, Screen Shots are "...clearly and expertly written with the best layout I have seen in a book of this sort... what you see is (for once) what you get. Outstandingly good and for beginners or semi-beginners: highly recommended."

The message is clear. If you really want to get into programming, get a Screen Shot.

With anything else, you won't be fully in the picture.

Screen Shot
PROGRAMMING SERIES

Screen Shot books available from larger branches of BOOTS, MENZIES, WH SMITH and other leading bookshops and computer stores. In case of difficulty, write to: Dorling Kindersley, 1-2 Henrietta Street, London WC2E 8PS.

Screen Shot Books 1 and 2 available for Acorn Electron, BBC Micro, Commodore 64, Sinclair ZX Spectrum, Sinclair ZX Spectrum+, Apple IIe. Books 3 and 4 available from April 1985.
Dorling Kindersley Publishers Limited.

BBC micro in a class of its own

BRITAIN's secondary schools have flocked to join the micro revolution to the point where an astonishing 98 per cent of them own classroom computers . . . and with Bees in more than three-quarters of them.

This latest proof that the BBC Acorn is in a class of its own when it comes to micro education arrived with the results of a government-funded survey showing that the typical secondary school has around nine computers.

However, government education departments are showing signs that their thoughts are increasingly turning from eight-bit machines like the Beeb to more powerful 16-bit micros.

This was confirmed by Junior Education Minister Bob Dunn at the recent exhibition on High-Technology and Computers in Education staged at London's Barbican Centre.

Up to now, he said, software supplied through the Micro-electronics Education Programme had been for eight-bit computers. However, the MEP has contacted software producers urging them to submit proposals for 16-bit programs.

Meanwhile teachers are busily planning to expand their present systems.

The survey, which was conducted among secondary schools in England, Northern Ireland and Wales, discovered that 85 per cent were planning more hardware over the next two years. One of the main priorities was to introduce or extend networks.

Of schools with micros, by far the two most popular were the BBC model B, found in 77 per cent of the schools surveyed, and the RML 380Z in 62 per cent.

Beebs aid famine

OXFAM's Glasgow office is about to take delivery of its first BBC system to cope with aid to Ethiopia and other countries.

However, a second system is urgently needed. Contact Keith McBean, Ardrossan Round Table, Rothbury, Alton St, West Kilbride, Ayrshire, tel: (0294) 64225.

The Beeb: £50 off in some high street chains; the Electron: now £129

Electron meets Sinclair head-on

ACORN has slashed the price of the Electron to meet the £129 price-tag on the Sinclair+ as part of an aggressive sales drive to meet Press and market accusations of complacency.

The company has also been re-organised internally to tackle specific market areas better, with a shake-up right through from research level to management.

The new stance was

heralded when Chris Curry hit out at Press reports that he regarded as influential in causing the drop in Acorn's share price, branding them as 'inaccurate and uninformed' and saying they were beginning to resemble a 'vendetta'.

This was followed by slashing the price of the Electron by a third and announcing special package deals to schools on the BBC micro – but no change in the high street. Although

there is now a £50 exchange scheme for old micros several chains are nevertheless offering £50 off the machine.

Chris Curry afterwards told *Acorn User* that he had appointed Alex Reid, formerly of British Telecom, as acting chief executive on the Acorn board. This was done, he said, 'to help restructuring of the company' and 'so that we can meet our markets better'.

Since then Acorn has written to education authorities offering them packages on the Electron, BBC, languages, second processors and networking. These will be available through dealers, thus deflecting criticism about lack of support.

The marketing department has been revamped and expanded since last year. A spokesman said: 'We have superb products and we haven't marketed them as fully as possible. This will change.'

As we went to press *Acorn* shares were suspended at the company's request.

ABC goes for special sectors

PRICES for all but two of the new range of Acorn business computers have been announced by Acorn.

The bottom-of-the-range Terminal comes in at £799 (plus VAT), the Personal Assistant £999, ABC100 £1,599, ABC110 £2,999, ABC300 £2,599, and the ABC310 £3,999.

Mike Tweedie, who is looking after the range, said he was not looking to compete with the established companies head-on. Instead he

was aiming for the BBC market – people who had bought a Beeb and were carefully examining the possibilities of upgrading. Machines would be packaged with software for specific markets – eg farmers, doctors and dentists.

The first group to be catered for would be farmers in a package that would, he hoped, be out by the summer. 'The way to sell,' he said, 'is to speak to the end user and look for co-operation with recognised bodies in specialist areas.'

Logo spectacular features in festival

A LOGO Spectacular, robotics and the role of computers in the community, voluntary work and business are all part of this year's London Computer Festival.

The action starts on April 9 and culminates in a four-day show centred on a dome in the open Piazza around Covent Garden, on April 17-20. At the same time, an exhibition will be held at Central Hall, Westminster.

Schools, community groups,

ITECs, the GLC and various companies are taking part.

The Logo Spectacular, for example, features schools and children showing what they have done. 'It's designed to be different to computer shows,' said the organiser Richard Olney. 'We want to have turtle hockey and lots of robots running around and we hope to create total chaos.'

This event takes place on April 13 at the address below and at a venue in the dock-

lands on the previous day.

Schools just starting out can get ideas and discuss the problems they're having with Logo, Mr Olney said. Teachers interested in taking part should contact him at the London New Technology Network, 86-100 St Pancras Way, London NW1, tel: 01-267 0642.

Readers who want details of the festival should contact Jim Lagden at the Covent Garden ITEC, 99-103 Long Acre, London WC2, tel: 01-240 8377.

Clwyd Technics

TREKKERTM MK VI ROBOT VEHICLE

Trekker is a multi-function classroom robot vehicle which does much more than merely moving and drawing. Designed for education but also ideal for the home enthusiast.

Trekker is supplied with over 30 pieces of software. Its applications include:

- white line follower • bar graphs
- pen software • angles • polygons
- area measurement • length measurement
- co-ordinates • music • sound

all of which are graphic, colourful and interesting. The complete **Trekker** package includes software guide, user guide, function key overlays and everything you need to teach control technology. The pupil worksheets, OHP transparencies and project work suggestions make **Trekker** easy to teach and great fun to learn.

Trekker requires no technical knowledge. An absolute beginner, following the instant start guide, can use his **Trekker** robot vehicle within 2½ minutes straight from the pack.

SPECIAL OFFER

WORD PROCESSOR HOME PACK

- The pack contains:-
- ★ 1 EDWORD word processor 16K ROM chip
 - ★ 1 user Reference Guide
 - ★ 1 Keyboard Insert
 - ★ 1 disc/cassette for printer configuration

You have heard of EDWORD, the educational word processor for the BBC microcomputer, now you can use it in your home at a price you really can afford. Send letters, compile reports, write books, poems, short stories... Take advantage of EDWORD's exceedingly user-friendly editing facilities to give your work the professional look, and never retype or use liquid paper again. Even the children can use EDWORD. BUT HURRY - this very special offer is available only while current stocks last. Send off the order form below or quote reference number EWPAU02.

New name and box for £50 modem

THE £50 Unicom modem has been renamed 'The Demon' and software is available for it on ROM for £20 (prices exclude VAT).

A spokesman pointed out that the change was due to a clash of names with two other companies.

Advertising for the modem was withdrawn in December because of a hold-up in production, but the mail order backlog was expected to have cleared by the time this magazine came out.

The price includes manual, power supply and leads. The software supports auto dial, Prestel, bulletin boards and Telecom Gold.

Contact Demon Products Ltd, 20 Orange St, London WC2H 7ED.

Tape to disc ROM

FRUSTRATED disc users might find a friend in the TDROM from Vine Micros. Claiming 99 per cent effectiveness, it will transfer protected software from cassette to disc via the chip.

Software houses will be pleased to note that the TDROM must be present for the transferred program to be re-loaded and run.

All available RAM from &400 to &7FFF is used, so even the longest programs can be transferred. The TDROM comes in single and double density formats at £18. Vine Micros can be reached on (0304) 812276.

Guitar tutor

STRIKING a chord for novice guitar and keyboard players is the release of two software packs for BBC and Electron users.

Guitar Chord Tutor generates chord shapes on a display of the top six frets and indicates finger positions, and up to 144 chords can be called.

Keyboard Chord Tutor provides the same information for use with the keyboard.

Contact the suppliers, P R Aaby Associates on (0323) 899202 for details.

New DFS in Plus 3 add-on for Electron

by Bruce Smith

THE Plus 3 finally made its appearance in the shops in January featuring the new Acorn Advanced Disc Filing System (ADFS).

The ADFS, used in conjunction with the WD1770 disc controller chip, is capable of supporting both single and double density discs.

Unlike the standard DFS, the ADFS supports a 'hierarchical' filing system. This means each directory on the disc may contain up to 47 files (as opposed to 31 per disc on the standard DFS). In turn, each directory may itself be composed of other directories, so that a hierarchy or tree-structure of files may be built-up. (See the April 1984 issue of *Acorn User* for details on this type of filing system.)

The penalty to pay for all this

Plus 3 with 3.5in disc drive for £229

is the loss of 3.5k of memory: PAGE is set to &1C00 (as opposed to &1900 on DFS). This is because under the new file handling system disc cata-

logue details are stored in RAM rather than extracted from the disc itself each time they are required.

The Plus 3 is supplied with a built-in 3.5in disc drive. However, 5.25in drives compatible with the BBC micro can be connected.

The Plus 3 bolts directly on to the Electron and does not need the Plus 1 (this fixes to the Plus 3 if it is used.)

Before the disc interface can be used, a foil shield supplied must be stuck to the end of the Electron to minimise interference.

A new power supply to replace the standard Electron plug is included.

The Welcome disc contains a variety of useful disc utilities, including formatting and verifying programs which have, surprisingly, been omitted from the firmware itself.

Pace, who 'launched' the first disc interface for the Electron at last year's *Acorn User Show*, have now 'discontinued' Le Box.

A spokesman for Pace said that this was due to 'the excessive price of purchasing the 8271 disc controller chip' it uses.

'Prices for a single chip had risen to over £80 at times,' he added.

He went on to say that Pace would consider a re-launch should the price of 8271s drop to more reasonable levels.

BBC micro upgrade likely

BBC micro owners look likely to be given the chance to upgrade to the ADFS, although this would involve fitting an extra internal board.

The Plus 3 manual refers to the system being BBC compatible, and as it is in ROM, the company must see it as a permanent release.

Using ROM chips is initially more expensive than EPROMs and the fact that the old 0.9 DFS has never been ROMmed suggests that Acorn regarded it as a temporary measure.

It also leaves the door open for an exchange service as EPROMs can be erased and used again.

The ADFS is capable of driving a Winchester hard disc connected to the 1MHz bus.

Like the Plus 3, the BBC version should work with the single/double density WD1770 disc controller chip, which poses an interesting dilemma. Acorn has always been against extra circuit boards to plug inside the present case because of upgrade and reliability problems. Versions are on test, however.

This adds weight to the rumours of a 'Model C' or

BBC+ micro this year. An 'Issue 10' board is known to exist which contains many of the features at present provided as add-on extras.

This could include additional sideways ROM sockets, bringing the on-board total to eight; an extra 32k of 'shadow' RAM, 20k of which would support screen memory as with the Aries B20 - thereby freeing all the user RAM to &7C00 for programs.

The remaining 12k could be used as dedicated sideways ROM workspace, leaving PAGE set at &E00 as on a cassette-based BBC micro.

Software compatibility would pose problems. Unprotected software could be transferred to the ADFS format, but protected programs would prove untransferrable.

The appearance of a BBC+ is unlikely to take place until existing stocks of BBC micros have been reduced.

Acorn spokesmen are tight-lipped over the whole affair. When asked if the ADFS would be part of a BBC+, the reply was: 'How can I comment on something that doesn't officially exist?'

CLEARANCE**
Single 100K Alps
disc drive
£69.95 + VAT

THE WINCHESTER HARD DISC DRIVE FOR THE BBC MICRO

- Available now!
- Ideal for Econet systems.
- Econet Level 2 compatible.
- Acorn DFS compatible.
- Fast ex-stock delivery.
- Low prices.
- Large capacities – 5, 20[†] & 25[†] Mb.
- Comprehensive user manual and utility software included.
- Simple installation.
- 12 month warranty on site maintenance & extended warranty available.

[†] (Available April 1985.)

5Mb HARD DISC ONLY £850 + VAT
20Mb[†] HARD DISC WITH INTEGRAL
FLOPPY DISC BACKUP
£1500 + VAT (guide only)

The ideal cost effective solution
for Econet storage problems.

MIDWICH BBC COMPATIBLE FLOPPY DISC DRIVES

- Lower prices.
- High quality Japanese mechanisms.
- 100K to 800K storage capacities.
- Available with integral Disc Interface.
- Optional integral power supply.
- 12 months warranty.
- Complete with utilities disc and comprehensive user manual.
- All 400K and 800K drives are 40/80 track switchable.

- Improved design. Easier operation.

HC1	Single 100K – Alps	£ 69.95
BBC 400	Single 400K 40/80 track	£160.00
BBC 400D	Dual (2 × 400K) 40/80 track	£290.00
BBC 400P	Single 400K 40/80 track with integral power	£175.00
BBC 400DP	Dual (2 × 400K) 40/80 track with integral power	£307.00
BBC 400PI	Single 400K 40/80 track with integral power and Disc Interface	£235.00
BBC 400DPI	Dual (2 × 400K) 40/80 track with integral power and Disc Interface	£367.00

Sky Baby for astronomers

SKY BABY, the astronomy package by Ronald Alpiar reviewed in January's issue, is still available and has not been republished by Century as *Starfinder* as readers may have been led to believe.

Sky Baby is designed for the more professional astronomer who wishes to know how the software works and to alter it. A manual is provided to do this and the author will be pleased to help users.

Starfinder is for less experienced users, without specialist knowledge of programming or astronomy.

The software was written by Alpiar, with a book by Heather Couper.

Star Baby costs £12.50 from Ronald Alpiar, Stellar Enterprise, 84 Dudsbury Road, Ferndown, Wimborne, Dorset BH22 8RG. Tel: (0202) 575234.

Bridge exchange

PLAYERS of Alligata's *Contract Bridge* can exchange their present cassettes for the improved version for a quid. Players may upgrade to disc for £3.

New versions have been available since January and are marked BRIDGE 85 on the inner label.

Contact Alligata Software, at 1 Orange Street, Sheffield S1 4DW.

By touching the screen, young children can manipulate software

Touch screen cuts out need for BBC keyboard

MICROVITEC is to market a touch screen device invented in a London day school for handicapped babies and developed with funding from the MEP.

The touch screen does away with the need to type at the keyboard. Instead, even the youngest children can just point at a TV or monitor screen to manipulate software.

John Sanderson, the inventor, explained that the touch screen works by transmitting a lattice of infra-red beams

across the front of the screen from two of its sides. These are detected on the other two sides, so the position of an object breaking the beams can be calculated by the computer and used to work out the response.

He added that software can be adapted to make use of the touch screen, and that the programs supplied were developed in a school.

Microvitec will release the Touchtec 501, as it is called, in late April for £201 (plus VAT) to

the education sector. This version is designed to slip over the front of Microvitec monitors and has a stand to tilt the monitor. It plugs into the 1MHz bus and comes with a handbook and nine demonstration programs.

Mike Bostock of the MEP pointed out that the keyboard was often the greatest barrier to people using a computer and that the touch screen could remove this without affecting the use of the computer for other things.

The infra-red technique described above was pioneered for military applications (originally with incandescent light bulbs), and John Sanderson started applying it about four years ago with mentally and physically handicapped children aged up to seven.

He has produced his own touch screen called the Cheyne Scribbler, after the road of the day school where he works. One of his applications is called Chatter. This enables children to point to a word on the screen which is then 'spoken' by a voice synthesiser. The 'voice' can be adapted to sound like an adult or child.

The Scribbler will work with any TV or monitor. It can be detached and placed on the floor or a table up to a yard away from the computer. It costs £280 (plus VAT) from 29 The Heights, Foxgrove Road, Beckenham, Kent BR2 2BY.

Prestel special for schools

CHILDREN and teachers will be able to use Viewdata from within the classroom, with the launch of Prestel Education, which includes several databases.

The four main databases presently run are accessed from a main menu:

- EDIT aims at providing a current awareness service with a view to the exchange of ideas and news on information technology (IT). In particular the concept of 'microviewdata' - a sort of DIY Prestel for school use.

- ECCTIS - a gateway to the Open University's computer allowing access to details of further educational courses six weeks or more in length.

- School Link, run by Edu-

cational Computing, provides news and views on microcomputers in education.

- COIC provides up to date information on a wide range of career options, supplied by the Manpower Services Commission.

Details on any subject can be dialled up by the teacher or student, and downloaded onto disc for future reference.

All the usual Prestel pages, which number over 300,000, will be available to schools, including Micronet 800, but at a reduced cost. Charges will be £49 per quarter, and Prestel says the average total yearly bill, including phone charges, for a subscribing school would be between £250-£300 per annum.

The quarterly charge includes up to 10 hours free use of Prestel in the daytime (though phone bills still need to be paid!) plus a £10 allowance towards the cost of charged pages. All educational pages are free.

The system has been developed with the Council for Educational Technology (CET), which will be helping to develop viewdata training courses and media packs.

An £80 equipment package will enable schools to buy a modem and software to convert their BBC micro into a Prestel terminal.

For a free information pack, write to Council for Education Technology, 3 Devonshire Street, London W1N 2BA.

BET YOU £1 YOU CAN'T CRACK IT.

Can you meet the challenge of Castle Quest, the absorbing new game for the BBC Micro featuring Micro Power's revolutionary M.P4 Scrollerama system? A game that's so difficult, we're prepared to bet you a pound, that even employing lightning reactions and sound logic you still can't crack it within three full months.

You can make a start at winning the wager by buying Castle Quest on cassette or disk from any of the dealers listed on the opposite page.

And good luck.
You'll need it.

**Probably the most challenging game
ever devised for the BBC Micro.**

And now we have E-NET series 5, still economical for five BBC's ... or more.

It's a cut above any other educational network available.

Even faster than standard E-NET.

Introduces extended fileserver features; "Superclients" control workareas within the system; "Hyperclients" use Acorn Z-80 second processor to run CP/M programs.

These are some of the improvements over standard E-NET. Find out all about this most advanced hard disc network, designed specifically for education.

Contact us for full facility details, educational discounts & hands-on demos.

Assembly language: the TV arclights expose the peers as out of touch with computers in education

Micros kick off Lords on TV

by Bill Penfold

THE historic, first televised broadcasting of parliament could hardly have begun more appropriately. Their Lordships launched themselves into the 20th century by probing the training for new technology... and the use of school computers.

On screen it looked marvellous. Red leather benches packed with peers, gold and gilt glistening in the arclights, and a discernible buzz of excitement.

The cameras went on air and Lord Orr-Ewing rose. 'How many computers are now in use in schools in the United Kingdom and how many teachers have been trained to instruct in their use?' he asked.

Live televising of parliament had arrived.

Almost immediately, though, it revealed just how out of touch even some ministers can be about important aspects of computer education – and unsympathetic some of their supporters are towards the subject.

It was the Earl of Swinton who replied for the government, reporting an estimated 80,000 microcomputers were now in schools with at least 120,000 teachers trained to

use them. Mutual congratulations all round until Baroness Lockwood (who took Chris Curry to task last year) queried what was actually happening in the classroom.

The Equal Opportunities Commission and others, she pointed out, had shown girls were not getting a fair share of classroom experience with the micros.

What, Lady Lockwood wanted to know, was the government doing about it and was the government taking this into account with teacher training?

This well-documented aspect of computer studies, however, was all news to the Earl of Swinton.

In fact he didn't really believe it.

'It would surprise me if that were in fact true,' his Grace

informed their Lordships.

But he promised: 'I shall take great pleasure in looking into it and coming back to the noble Baroness about it if it is the case.'

However, not all the peers appeared so enamoured of the micro.

Certainly not government backbencher Lord Harmor-Nichols. As far as he was concerned, 'Many people hope that this obsession with computers and such-like will not interfere with paying real attention to developing the natural talents of reading, writing and arithmetic in the young people of today.'

That fortunately was not a view shared by the minister. It was, he assured the House, not a choice between the 'Three Rs' and computing – 'the two can go hand in glove.'

Doubts about the use of computers in education were echoed from the Opposition benches by Lord Alexander of Potterhill. He suggested the government should ensure 'children in our schools reach an adequate personal standard in numeracy and literacy before they embark upon a course in computers.'

This gave the minister the opportunity to remind the Lords that 'some children with very severe learning difficulties are motivated by computers.'

The Earl of Swinton explained: 'Because of computers they can often find the encouragement to help them in their basic reading and writing skills. I feel that the two go together.'

Just like their Lordships and television.

Software releases for AMX mouse

AMS has announced two new software packages for the AMX Mouse.

The Desk Calculator pack, supplied as two discs, is a mini-office system and includes calculator, disc catalogue, memo pad, telephone directory and appointments

calendar. Full use is made of icons and the built-in mouse software.

The second package is a utility disc for AMX Art supplied with the mouse. It will include a zoom facility that will enable changes to be performed at pixel level.

The calculator pack will sell for under £30 and received its first public showing at the recent High Technology and Computers in Education exhibition. It should be available this month.

For more information contact AMS on (0925) 602690.

On radio

As we went to press we were unable to confirm whether the lovely Barry Norman would be back hosting Radio 4's *Chip Shop*. However, the series will be back on the airwaves in April.

On television

BBC TV's *Micro Live* is appearing for the last time in the present series on Friday March 8 at 6pm and will be repeated the following day at about 3pm. Another series is being planned for the autumn.

4 *Computer Buffs*, the new series on Channel 4, went on air on February 11 at 5.30pm. The series is weekly and is seven programmes long. Their aim is to provide news and current affairs for serious computer users, to maximise the potential of computer hardware and to tell you what can be achieved by a modem and the cost of a phone call.

On show

□ April 16-18, Northern Computer Show '85, Belle Vue, Manchester. Contact: Mike Birch/Chrissy Cottle, 01-643 8040.

□ March 1-2, Educational Software Fair, Dauntsey's School, West Lavington, Devises, Wiltshire. Contact: Peter Harris, Lavington (028481) 2325 or 2289.

To contact

□ Acorn Customer Services (0223) 210111

□ Radio 4 *Chip Shop's* Chip-line:

London 01-790 3400

Liverpool 051-236 8474

Birmingham 021-355 6144

Bristol (0272) 279494

□ BBC TV's *Micro Live* bulletin

board is on 01-579 2288 (type INFO BBC on Telecom Gold electronic mail system).

□ BBC Computer Literacy Project, Broadcasting Support Services, PO Box 7, London W3 6XJ. Please send stamped-addressed envelope.

□ MEP (Microelectronics Education Programme), Cheviot House, Coach Lane Campus, Newcastle-upon-Tyne, NE7 7XA. Hardware and software support for schools. Please send sae.

□ MAPE (Micros and Primary Education), c/o Barry Holmes, St Helen's Primary School, Bluntisham, Cambs. User group for primary teachers. Please send sae.

□ MUSE (Micro Users in Schools and Education), PO Box 43, Hull HU1 2HD. User group for teachers and parents. Please send sae.

□ National Extension College, 18 Brooklands Ave, Cambridge CB2 2HN. Educational and training courses on the BBC micro. Please send sae.

□ CET (Council for Education Technology), 3 Devonshire Street, London W1N 2BA. Government body which oversees MEP. Please send sae.

□ Software Limited configure CP/M programs for the BBC micro. Write for a catalogue to No 2 Alice Owen Technology Centre, 251 Goswell Rd, London EC1N 7JQ. Tel: 01-833 1173.

For help

□ To contact *Acorn User* authors, write c/o the editorial address given on page 2.

□ Seikosha AP/GP100 printer help sheets are available from *Acorn User* for 50p, plus sae. These consist of three programs, including a screen dump, and three pages of notes on using these printers.

□ Monitor choice: Photocopies of the review of four monitors, plus a set of nine test programs from the June issue cost 72p (inc post). A copy of the issue costs £1.25 (see page 93).

□ Bulletin boards: Information on 26 free-access boards was given in the October issue. 54p for photocopy (see page 93).

□ For *Acorn User* cassettes, discs, back issues, binders, contact PHS Mailings on (02934) 72208 (see page 96).

On Prestel

TUBELINK is a database for users of second processors on Viewfax, which is part of Prestel Microcomputing.

Pages start at ★258216# and are aimed at programmers with 6502 and Z80 add-ons (Torch and Acorn).

For disc

□ Tape to disc transfer utility: June 84, p55.

□ 40/80 dual format discs: produce discs readable on both types of drives, Feb 84, p69.

Blunderbox

□ HEINEMANN, the publishers of the *Dudley Programs* (reviewed December 84), tell us that disc versions are now available. Theme Packs cost £36 + VAT and the Complete Suite, £195 + VAT. They are obtainable from Heinemann Education Books, The Windmill Press, Kingswood, Tadworth, Surrey KT20 6TG.

□ LOCO Systems' (Modem review, February issue) phone number should have read 04862 4480.

□ THE Fischertechnik Robot Kit is available from Artur Fischer UK, Fischer House, 25 Newtown Road, Marlow, Bucks. Tel: Marlow 72882/6.

□ AN error appeared in the Quadline (January issue) disc notes. On page 67, the top of column three should read: "... and enter the following lines from listing 1: 10 to 200 inclusive, 250 to 360 inclusive ...". Also, line 6 of the listing in that column should read:

6 FOR L%=0 TO &1000
STEP 4

January's cassette contained the correct listings for Quadline. However they are saved under the author's name as ACTON1 and ACTON2. The former chains the latter in as Q2, which is never found. To use the programs correctly save them to disc or tape using the instructions provided in the article.

□ JOE Telford's Ed-fax listing (January issue) contained an error in that the two semicolons in line 900 look like colons. Line 900 should therefore read:

```
900 PRINTTAB(0,24);  
STRING$(39,"");
```

Several of you were confused by the pixel editor. Before selecting the graphics mode, and while in alphabetic mode, select the desired colour of the graphics - ie CTRL-f7 for white, then press the Return key to move into the graphics mode. The QWASZX keys can then be used to generate, set and clear teletext pixels.

□ ALSO in January, a minor error crept into Peter Sandford's colour fill routine (listing 4, page 117). In certain circumstances, this will cause the routine to leave a single pixel uncoloured when filling into an acute angle. This can easily be overcome by amending the following three lines:

```
4300 CMP &74:BNE  
notequal:CLC
```

```
4310 .notequal  
4320 LDA xhi:SBC &75
```

These lines should be changed *after* the original listing has been entered and debugged, as they will invalidate the checksum test at line 90. This line should therefore be deleted before assembling the amended code.

□ MALCOLM Banthorpe's Turtle program (February issue) contained a slight error. In line 470 the + sign should in fact be a - sign. This now means that you turn left when LEFT is entered rather than turning right in response to LEFT!

How to present programs and articles

FIRST read the 'Notes for Authors' on the contents page.

Your submission should be original and have a practical use. We receive many articles on subjects we have already covered - often quite recently.

A neat and clear presentation is very important. A few hours' thought about how your article looks, diagrams, appli-

cations and documentation will ensure that it is evaluated quickly and efficiently, and is more likely to be accepted.

Program presentation is also important. Follow the 'standard' we've adopted in the yellow pages. Most importantly, your program must run on Basic 1. The only exception is if the program is of a Basic 2

tutorial nature. Basic and illegal calls to routines in the MOS should not be used. Program lines should increment in steps of 10, with the first four being REMed as per the format in the yellow pages.

Program listings should not be indented, and avoid multi-statement lines.

Use the standard assembler

presentation, one mnemonic per line, upper case mnemonics with lower case labels. If the assembler is long include a checksum.

Provide a list of PROCs, FN's and variables detailing the operation of each on a separate sheet of paper, along with any hints or tips regarding entering the program.

—IT'S UP TO YOU!—

READERS! This is your big chance to say how you would like to see *Acorn User* develop in the next year—and win some hardware into the bargain. What we want is to pick your brains to help us give you a better magazine. The answers you give will be compiled statistically, and your individual questionnaires will be kept confidential.

We want readers of all ages, sexes and opinions to tell us what they think. If younger readers have any problems, ask a friend, teacher or the rest of the family to help.

Just tick the box or boxes you think relevant and be as honest as possible.

Fill in your name and address, and give us your slogan

ULTRACALC 2

A powerful spreadsheet program for businessmen, scientists, accountants and everyone who needs ultra-fast calculations. It transforms your Model B computer into a fast and flexible calculation system.

Use Ultracalc 2 for budgets, cash-flow forecasts and 'What if?' projections; for price lists, time sheets and stock control; for scientific calculations, or as a compact data-base. A full range of editing and display options enables you to adapt the spreadsheet to suit your needs.

Ultracalc's built in features include:-

- Simple communication with the program
- Wide choice of editing, display and printing options
- Output can be fed to a word processor
- Efficient memory usage, enabling large spreadsheets to be compiled
- Operates with 6502 second processor

If you already have Ultracalc you can upgrade it to Ultracalc 2 for only £6.25. Write for an application form to Software Editor, BBC Publications, 35 Marylebone High Street, London W1M 4AA, enclosing a stamped addressed envelope.

PLUS MANY MORE EXCITING PROGRAMS INCLUDING:

WORD MOVER

An ingenious program offering many of the features of a word processor—with none of the complications!

Cassette: £9.95

DRAWSTICK

A versatile design aid for children and adults. Use it for pictures, diagrams or as a CAD tool.

Cassette: £9.95

VU-TYPE PROFESSIONAL

An exciting, easy-to-use typing tutor with colourful graphics and Pitman-approved exercises to increase your speed and accuracy.
Disc: £21.95

All software is for the British Broadcasting Corporation Model B Microcomputer and is available from booksellers and computer shops. Prices include VAT.

ACORN BITSTICK

The renowned 'BITSTICK' graphic CAD package. Using the on-screen menu and colour palette, it can draw freehand as well as lines and shapes with great accuracy. Any part of a drawing may be magnified many times, and up to 48 drawings may be saved on a disc. In total, a friendly yet sophisticated CAD system offering tremendous value. **£325(a)**

FX80 dump routine available. **£35**

ACORN Z80 2nd Processor

This processor converts your BBC into a complete business micro with all the computing power a professional would need. The system is CP/M based and is supplied with free software package. The package includes three office productivity programs, (memoplan, fileplan and graphplan), Systems generator program, three programming languages plus the ACCOUNTANT business program. Software is accompanied by extensive manuals that not only get you started but also answers your whys and hows.

All for only **£399 (a) (incl VAT)**

See our section on CP/M software for other packages available for use with this processor.

ACORN 6502 2nd Processor

This processor is designed for the serious computer user who wants to get even more out of his computer. This processor provides increased memory — allowing up to 44K for Basic programs and up to 60K for assembly language programs, regardless of screen mode in use. (ideal for VIEW). An increase in speed means that programs run up to 50% faster. The second processor/BBC combination offer computing power comparable to systems costing twice as much.

£175 (a)

ACORN P-SYSTEM

NEW

The long-awaited-for portable operating system has arrived. Intended for use with the 6502 Second processor, this portable operating system is a complete implementation and comes complete with a Filer, Editor, and compilers for two languages, USCD PASCAL and FORTRAN-77. Widely used in universities and colleges, as well as being popular with business software authors, P-System is user-friendly, offering ease of program development as well as portability. **£273(b)**

A BBC Family System

ACORN WINCHESTER DRIVES

Acorn Hard discs are now available in 10 Mbyte and 30 Mbyte versions. The drive plugs into the 1 MHz bus. The ADFS filing system with its hierarchical filing structure provides an excellent file management facilities. Data is transferred at a rate of 1 Mbit/sec and the 'seek time' is 85 ms. Full details on request.

10 Mbyte Winchester Drive **£1300(a)**
 30 Mbyte Winchester Drive **£1999(a)**

Acorn File Server Level 3: This enhanced file server allows more users on the network with better user access. **£300(b)**
 If purchased with a Winchester Drive **£200(b)**

TORCH UNICORN PRODUCTS

The TORCH Unicorn system has been in the field for over two years and is now a proven Z80 system for the BBC. It gives you the potential to expand which no other system can currently offer. You can expand a single system with a 20Mb Hard Disc, have the processing power of a 32bit 68000 cpu with up to 1Mbyte of RAM and a Single/Multi-user UNIX operating System or set up a network of up to 254 machines. All these capabilities are available now. Probably the most popular upgrade is the TORCH Z80 PACK, offering an attractive 2 x 400K disc drive, a Z80 second processor with 64K RAM, and a CP/M compatible operating system. A free bonus is the easy-to-use, yet advanced PERFECT range of software including a word-processor, speller, spreadsheet and database. Z80 BBC BASIC is also included. **£650(a)**

TORCH GRADUATE SYSTEM

The ultimate upgrade — converts your BBC into a powerful 16 Bit business computer and makes it disc and hardware compatible with the IBM PC. With 256K RAM and single/dual drives, it simply connects through the 1MHz bus. (The disc drives can be used in both BBC and IBM mode, without requiring a disc interface.) The top-of-the-range Model G800/2 comes complete with the free Xchange range of software, and includes a full-feature word processor, a financial planner, a database and a business graphics package — all 'linkable'.

PRINTERS

ALL PRINTERS HAVE A 12 MONTH GUARANTEE

DOT MATRIX

KAGA TAXAN:

- * Epson Compatible Control codes
- * 80 or 156 Column
- * NEAR LETTER QUALITY Print using 23 x 18 matrix
- * Text Modes include Normal, Italic, Enlarged, Condensed, Super/Sub Script, Proportional
- * Dot Addressable graphics in various modes
- * 3K buffer which can also hold user defined characters
- * Extra ROM/RAM socket for custom print fonts
- * Friction & Tractor feed with built in paper roll holder

KP810 (80 column) £255 (a)
KP910 (156 column) £359 (a)

EPSON:

The industry standard printer offering the quality, reliability and versatility.

RX80T £215 (a) RX80FT £225 (a)
RX100 £345 (a) FX80 £315 (a) FX100 £435 (a)

DAISY WHEEL

BROTHER HR15: • 14 cps • 3K Buffer • Two colour printing • Proportional spacing • Underline • • Bold • Shadow print • Super/Sub script + many other features.

BROTHER HR15 £340 (a)

JUKI 6100: • 15 cps • 2K Buffer • Switchable 10/12/15 cpi • Proportional printing • Linear Motor for max reliability.

JUKI 6100 £340 (a)

ACORN VIEW PRINTER DRIVER GENERATOR

As well as coming with pre-defined drivers for printers including EPSON FX80, JUKI6100 etc, this generator enables you, by answering a few simple questions, to generate your own dedicated driver for almost any printer. The days of having to buy individual dedicated printer drivers are gone! **£10(d)**

EPSON HI-80 PLOTTER

This new A4 size Epson plotter has many features and commands not present on plotters costing far more. Features include: 4 pens at same time — up to 10 colours, various types of pens, high plotting speed, can produce text in normal way as well as user defined characters, text can combine with graphics etc., etc. **£399(a)**

GRAPHICS PLOTTER/WORK STATION

Equally at home in the artists studio, hobbyists workshop, science lab or a classroom, this system has something to offer for everyone. The 3 colour graphics plotter provides both precision and versatility. The carriage can be moved with an accuracy of 0.025cm over an A4 area — the plotter being able to accept paper and far thicker materials at sizes of up to A3. The basic plotter carries 3 colour pens each of which is software selectable. Additional accessories greatly enhance the versatility of the unit without losing the accuracy. The servo controlled drill/router, and scribe can be used on various materials. A unique Opto Sensor (using a Hewlett Packard device) turns the plotter into a high-res scanning digitiser to read & store whole diagrams and photographs. Workstation comes complete all accessories.

Workstation Complete £490(a)

Basic Plotter £270(a) Opto Sensor £72(c)
Drill/Router Attachment £79(c)
Power Supply: PS12V £42(c) PS24V £78(c)
Scandump Utility Disc £14.95(d)

PRINTER SHARER/BUFFER

A unique sharer/buffer that provides a simple solution to improve system utilisation. It can be connected to up to three computers and it will automatically switch between the computers to scan for data — no manual switching required. High speed data input rate to the buffer cuts down the normal waiting time for the computers for the printing operation to complete and thus allowing the computers to be used for other uses. In networked systems it can eliminate the printer server unit. The 64K buffer would hold over 30 A4 pages of text.

Facilities include: COPY, PAUSE AND RESET. LED indication for percentage of memory available and data source. Mains powered. Send for detailed specification.

TSB 64 Buffer/Sharer £245(a)
Cable Set £30

PERIPHERAL & COMPUTER SHARERS

We now offer an extended range of peripheral sharers to allow the user to switch between computers, printers and modems. High quality switching mechanisms housed in fully shielded metal cases ensure reliability. No power required.

Three Computers to one centronics printer (all 36 lines switched) **£65(b)**

Four Computers to one centronics printer (all 36 lines switched) **£79(b)**

Three Computers to one serial printer/modem (all 25 lines switched) **£59(b)**

Four Computers to one serial printer/modem **£69(b)**

BBC Cable Sets 3 way **£22(c)** 4 way **£27.50(c)**

Computer Sharer:

Allows one computer to be connected to two parallel printers fitted with cable for the BBC computer **£19.50(b)**.

GRAFPAD

A low cost graphic tablet offering the performance & durability required by industrial and educational users. It is compact, accurate & reliable; working area 240 x 192mm + menu area. Comes complete with a CAD package. **£110(b)**.

RB2 TRACKER BALL

Marconi with its years of experience making tracker balls for use in Military and Air Traffic Control have developed a quality device for the serious hobbyist, for educational uses, and for low cost CAD/CAM applications. RB2 is a compact, ergonomically designed tracker ball that provides precise positional control and rapid direction changing using a freely rotating resin ball in any direction without the limiting stops or the zero point drift of joystick controls. Three switch buttons enable easy software manipulation to incorporate the use of the tracker ball. Appropriate software will enable the RB2 to take over the functions of cursor keys in word processing, CAD/CAM applications and two dimensional positional controls of robots, drillheads etc. RB2 which plugs into the user port is supplied with utility programme to use it as a joystick with other software, a comprehensive graphics/CAD program and a program demonstrating its editing capabilities. User guide includes instructions on writing your own programs for the RB2. £52(b)

AMX MOUSE - As seen on the BBC TV Micro program

In conjunction with a controlling ROM this sophisticated mouse has many advanced features such as Icons, Windows etc., these can be used in ordinary programs as well as sophisticated CAD Design. The supplied 'AMX ART' is a superb, yet simple-to-use CAD package allowing the creation of amazing graphical designs. A screendump for drawings is included. It can also be used with Wordwise/View to replace the cursor keys. Supplied complete with CAD Package, ROM and full instruction manual. £75(b)

DISC DRIVES

TECHNOMATIC disc drives come fitted with high quality slimline Japanese mechanisms and represent the state of art in disc drive technology. They are built to highest standards and are all tested to their full performance capability before packaging. Single drives are offered with or without integral power supply whilst the dual drives are supplied with generously rated switch mode power supply. Attractively designed steel casings are painted in hard wearing BBC matching paint. All drives can operate in single and double density modes. Drives are supplied with cables, manual and formatting disc and are ready to be fitted to the computer.

Single Drives

1 x 100K 40T SS	: TS55A	£100(b);	CS55A with psu	£125(b)
1 x 200K 40/80TSS	: TS55E	£140(b);	CS55E with psu	£150(b)
1 x 200K 40TDS		£115(a)

2 x 200K 40/80T SS:	TD55E with psu	£325(a)
2 x 400K 40/80T DS:	TD55M with psu	£350(a)
2 x 400K 40/80T DS:	TD55MP in flat pack with built-in plinth	£365(a)

DISC DRIVE MULTIPLEXER

A simple device that enables up to four computers to be connected to one single or dual drive. Ideal unit for installing in classrooms where networking is not planned or necessary or the costs have to be kept low or where software information is shared. Several of these units can be installed in series to connect more computers to access the same discs. Units supplied with 5' of cable per outlet as standard. Mains powered.

Write for full details.

TDM 4 Quad Unit (upto 4 computers) £135(a)

TDM 2 Dual Unit (2 computers) £75(b)

Note: All computers must be fitted with a DFS

3M FLOPPY DISCS

Authorised Distributor Data Recording Products

Industry standard high quality discs with guaranteed error free performance for life. £1 Wine Voucher with purchases of every 20 discs only until voucher stocks last.

Discs in packs of 10:

40T SSDD £15(c)	40 T DSDD £18(c)
80 T SSDD £22(c)	80 T DSDD £24(c)

DISC ACCESSORIES

Single Disc Cable £6(d)	Dual Disc Cable £8.50(d)
10 Disc Library Case £1.80(d)	30 Disc Case £6.00(c)
Lockable Storage Boxes 30/40 Discs £14(c)	100 Discs £19(c)

The FLOPPICLENE disc head cleaning kit is the ideal way to ensure the optimum performance of your drives. The use of disposable cleaning discs eliminate the risk of recontamination and abrasion of the sensitive disc heads and ensure continuously reliable data capture and transmission.

Floppiclene with 20 disposable cleaning discs. £14.50(b).

COMMUNICATIONS

MODEMS

ACORN PRESTEL: The official Acorn add-on — an advanced BT Approved, Auto-Dial, Prestel Terminal ideal for British Telecom Gold. Comprehensive software includes 'tagged' frames, downloading of Telesoftware, saving of frames, printing, sophisticated 'Mailbox' handling c/w editor. A built-in speaker allows line monitoring. A simple !BOOT file allows automatic operation **£106(b)**

BUZZ BOX A full spec, BT approved, pocket size, direct connect modem with both originate & answer modes, full & half duplex, allowing access to many databases, bulletin-boards as well as Intercomputer communications. It conforms to CCITT V21 300/300 Baud Standard. Battery/mains powered **£55(c)** BBC Lead **£6** External PSU **£9(c)**

MINOR MIRACLES WS2000 A world standard modem, having BT approval, covering V21, V23, BELL 103/113/108 and including 75,300,600,1200 Baud ratings. (It even includes 'reverse Prestel!'). This is the modem that will cover 'Prestel' type systems as well as Bulletin Boards both in the UK and abroad. What possibly gives this modem its biggest advantage is its option of computer control. A 25Way RS232 input as well as possible

computer controlled auto-dial/auto-answer makes this modem unique. WS2000 **£129(c)** BBC Serial Cable **£7**

WS2000 Auto-Dial card: includes an integral loudspeaker for monitoring of the phone line **£30(d)**. BBC User Port cable (for modem control) **£7**. **SKI KIT** (Allowing total control of the modem by your computer) **£10**. **DS1 Disc (for Commstar):** When used with the Auto-dial card, SK1 Kit, and a user port cable, this software will dial out to Prestel, enter your password etc. and leave you in Commstar. Will also store many bulletin board telephone numbers for autodialling **£10**.

WS2000 Auto-Answer Card **£30(d)**.

UNICOM A High Performance, yet low-cost Modem. Features include: Auto-dial & auto-answer, Auto baud rate scan, 75,300,1200 Baud rates with V21, V23 and Bell standards. Sophisticated software in ROM allow many features like: Auto-Dial, Redial, Remote facilities etc. An Auto-Dial disc allows storage of commonly dialled numbers. UNICOM **£49.95(b)** Unicom ROM **£20** Unicom Disc **£9.95** Unicom Cable **£6(d)** Not BT approved

TELEMOD-2 A BT approved modem complying with CCITT V23 1200/75 Duplex & 1200/1200 Half-Duplex standard, that allows communication with Viewdate services e.g. Prestel, Micronet etc., as well as using 1200 Baud for communicating with other computer users. Mains powered. **TELEMOD 2** **£50(b)** BBC Lead **£7.00**

COMMSTAR An ideal communications Rom. Extremely easy to use, yet very versatile. It features both a Prestel mode as well as a Terminal mode, thus offering very good value for money. In Prestel mode, all normal Prestel features are available including, downloading of software, saving and retrieving of pages on disc, page tag, revealing of hidden text etc. Its terminal mode is ideal for bulletin boards etc. All input may be copied into a buffer in memory over which full control is available. Controls of protocols are very simple and any type of file, (not just ASCII) may be sent using XModem protocols. Even includes an elapsed time-clock. **£29(d)**

TERMI-II A good all round package for communicating with notice boards, electronic mail services etc. Termini is a semi-intelligent terminal emulator allowing the BBC to act as a dumb terminal, slave BBC graphics terminal, or VT52 terminal. The rates at which data is sent or received is easily set up with rates of up to 4800 Baud with 40/80 col. selectable. Allows files to be transmitted from disc, or a copy of incoming data to be sent to a file or to a printer. (Termini is not suitable for PRESTEL). **£28(d)**

COMMUNICATOR This is a full 80 col VT100 terminal emulation program on 16K eeprom. It is a more advanced program than TERMI and features easy to follow screen menus. The rate at which data is sent or received is easily set up with rates up to 19200 Baud with 80 column text. Allows files to be transmitted from disc, or a copy of incoming data to be sent to a file or to a printer. (Communicator is not suitable for PRESTEL). **£59(d)**.

TECHNOMATIC

All prices exclude VAT

EPROMER II

This enhanced eeprom programmer will handle the full range of popular single rail eeproms. Its sophisticated menu driven software makes the programming of eeproms simple and efficient. Features included in this programmer are normally found in industrial grade programmers costing many times more.

- Interfaces with the BBC through 1 Mhz bus. Fully buffered and complies with the ACORN protocols. Integral power supply ensures no power drain from the computer.
- All eeproms up to 16K programmable in single pass.
- User friendly software driven menu provides total control from the keyboard — no knobs to fiddle with.
- Selectable programming voltage — 25V/12.5V.
- Defaults to normal programming — high speed algorithmic programming selectable.
- READ/BLANK CHECK/PROGRAM/VERIFY at any address or addresses.
- Constant display of all options selected.
- Full screen editor with HEX/ASCII input — Full TAPE/DISC filing facility.
- Data entry from the keyboard, disc/tape or another eeprom.
- Several BBC BASIC programs can be entered on one eeprom.

EPROMER II with manual & cassette **£99(b)** Software on: Disc **£3**

UV ERASERS

UVT1T Eraser with built-in timer and mains indicator. Built-in safety interlock to avoid accidental exposure to the harmful UV rays. It can handle up to 5 eeproms at a time with an average erasing time of about 20 mins. **£59(b)**.

UV1 as above but without the timer. **£47(b)**.

For Industrial Users, we offer **UV140** and **UV141** erasers with handling capacity of 14 eeproms. **UV141** has a built in timer. Both offer full built in safety features **UV140** **£61**; **UV141** **£79(b)**.

SMARTMOUTH

The original 'Infinite Speech' Synthesiser — Still the best around!! A ready built, self contained speech synthesiser unit, attractively packaged with built in speaker. Tailored frequency response audio stages for optimum sound quality. Any word can be easily created — very economical with memory. Plugs into the user port — no roms required. Demo and development programs supplied on cassette (easily transferred to disc) **£31(c)**

'TIME-WARP' REAL-TIME CLOCK CALENDER

We have broken the price barrier! A low cost unit, allowing the facilities of units costing far more. Built to professional standards, it opens up the total spectrum of Real-Time applications. Possibilities include desk diary/planner, calendar, continuous display of on-screen time and date information, automatic document dating, precise timing and control in scientific applications — its uses are endless. Simply plugs into the user port — battery backup is supplied as standard. A full manual as well as Extensive software on cassette (easily transferred to disc) — no ROMs needed. **£29(c)**

RAMROM-15

The advanced sideways ROM/RAM expansion system. This is an external unit, using high quality construction, attractively packaged in a BBC coloured metal case, allowing easy access to all the sockets. (Allows other units to be fitted inside the BBC). Absolutely no soldering is required. Allows 11/12 additional sideways ROMs to be fitted with an option of up to 16K sideways RAM. All commonly available RAM can be used i.e. 4801/6116/6264 or xx128. All the hardware to take the RAM is already fitted e.g. battery backup. For development work and further expansion, most of the 6502 processor signals are available. Supplied with utility disc and full instruction manual. **£112(b)**

01-208 1177

Please add carriage: (a) £8; (b) £2.50; (c) £1.50; (d) £1 and VAT at 15% to order. Carriage (a) sent by Datapost

ATPL SIDEWISE ROM EXPANSION BOARD

This is a well constructed expansion board that does not require soldering in its installation. All buses are buffered, it allows full sideways Rom expansion to a total of 16 ROMs. One socket has been split into two 8K sockets to allow the use of 8K byte CMOS RAM chips, giving a total of 16K sideways RAM. This is ideal for sideways rom development, and will also allow downloading of software from cassette or disc. The battery backup option will allow retention of data in the RAM, when power to the computer is removed. Several link-selectable options include the choice of type of Eprom, and a 'write-protect' for the RAM option. £39(d) Back-up Kit £18.

ACORN IEEE INTERFACE

This interface enables a BBC computer to control any scientific and technical equipment that conforms to the IEEE488 standard, at a lower price than other systems, but without sacrificing any aspect of the standard. The interface can link up to 14 separate IEEE compatible devices. Typical applications are in experimental work in academic and industrial laboratories, with the advantage of speed, accuracy and repeatability. The interface is mains powered and comes with cables, IEEEFS ROM, and user guide. £282(a)

ACORN TELETEXT INTERFACE

This interface allows the retrieval and storage of data transmitted by both BBC and IBA. There are currently many educational and other programs being transmitted, and this unit will allow their retrieval absolutely free. In 'Terminal' mode, the system receives and decodes pages from both Ceefax and Oracle. (These pages can be stored). In 'Telesoftware' mode, the system can load, run and execute programs that are transmitted. This unit gives you a professional teletext terminal at a cost effective price. £195(b)

ACORN MUSIC 500

Convert your BBC micro into a sophisticated music composition aid and sound effects generator. Custom made software will provide you with the flexibility to compose, experiment, perform and teach music. Stereo output can be connected to a sound system including your home stereo unit. Full specification on request. £174(a)

DATABASE MANAGEMENT SYSTEM

Gemini DATAGEM

The Definitive Random Access, 24K ROM Based DATABASE MANAGEMENT SYSTEM.

Datagem is the first truly flexible database for the BBC Micro that can make your system really useful and efficient, saving you money in the long run. The system includes a carrier board containing two Eproms, demonstration applications disc in both 40/80T, professional documentation with quick reference card, and 'Trans' utility program. Features include: *almost unlimited file size (max 10MByte) *supports up to 4 drives *Max of 5000 records per file *max 6K record size *max of 62 fields *9 level hierarchical search system with facilities to store results of searches. Searches can be any one of the following: Search, Include, Exclude, Combine, Common or Difference *user defined variables *generates form letters from records. Please ask for leaflet. £112(c).

STARdataBASE A fast machine code, true random access database program in a 16K Eprom. Up to 4096 records in a file, up to 69 fields in a record. The record layout is totally user defined. Entirely menu driven — thus very user friendly. Extremely fast searches are possible using the Keysearch facility. Mailmerging from View and Wordwise, and address labelling. Its printer configuration suits any BBC compatible printer. £75(d)

ROMs/SOFTWARE

VIEW Acorn's new version V2.1 word processor rom. Advantages include printing straight from memory and editing in any mode. £48(c)

HI VIEW Disc based version of VIEW word processor for use with the 6502 2nd processor. Allows 47K of user memory. £52(c)

VIEW INDEX Disc based program to create an index from VIEW text files. Ideal for anyone concerned with writing extensive reports or books. £13(d)

WORDWISE One of the most popular word processors for general use. Wordwise SpellCheck Disc — A must for any serious word processor user. Normal price £16.50(d). If bought with Wordwise: No p&p and only £14.

WORDWISE PLUS The new advanced Wordwise on a 16K eprom, for the more specialised users who require added features and flexibility. New facilities include: 2nd Processor compatible allowing 80 column previewing in all cases, a new Basic-like language, new editing features and embedded commands etc etc. Four new programs are also supplied allowing mail-merging, index generating, two-column text printout and continuous processing. A new 56 page introductory manual and a 180 page reference manual complete this rather special package. Finally, it is able to use existing Wordwise files without any modification. £49(d).

SPELLCHECK II: A rom based fast machine code program that works with both VIEW and WORDWISE. Vocabulary disc supplied with 6000 words can be expanded to well over 17000 words on 100K drive. Fully compatible with 6502 second processor. £26(d)

ISO-PASCAL: Acorn's full implementation of International Standard Pascal on two 16K ROMs. Disc Version for use on 6502 2nd Processor also supplied. Comprehensive manual. £60(c)

ACORN LOGO A full implementation of the Logo language from Acornsoft. Supplied as two ROMs with a tutorial course and technical manual. £60(b)

ULTRACALC This enhanced version of the original BBC Publications popular spreadsheet rom includes many new features including full compatibility with the 6502 2nd processor running as HiCalc allowing 44K of user memory, operate in any mode, greater flexibility in printer control, spooling as ASCII file etc. All these features are in addition to the existing powerful features such as handling of labels and numbers as values. Column width control and features normality found in well designed spreadsheets. £69(d)

VIEWSHEET Acorn's spreadsheet provides 255 columns and 255 rows and will operate in any mode. Windows can be created which can then be rearranged to provide any print format required. Function keys provide for easy entry of commands. Printer control codes can be used using the printer driver. Fully compatible with VIEW and the 6502 2nd Processor. £52(d)

BCPL A full implementation of the BCPL compiler language consisting of the language rom, disc containing the BCPL compiler, a screen editor, a 6502 assembler, other utilities and programming aids and examples of BCPL code and a 450 page manual. BCPL can be used to develop games programs, commercial packages, system software, to write control systems and to produce programs which otherwise would need to be written in assembler. £52(b)

BCPL STAND ALONE GENERATOR Utilities in this package enable the programs developed using the BCPL rom to be converted so that they can be run on any BBC micro whether it has a BCPL rom or not. Stand alone programs for other 6502 based systems can also be developed. £43(d)

BCPL CALCULATIONS PACKAGE: supplied on disc, it supports floating point, fixed point and fast integer calculations. It includes the BCPL calculation files, example files and a comprehensive user guide. £17.30(b)

ACORN LISP Rom £43(d)

G:FORTH An advanced implementation of FORTH which follows the 79-Standard specification on a 16K ROM and has a full double number extension set. It incorporates an editor, 6502 assembler, very fast turtle graphics and supports extensive string and file handling. It contains 540 predefined words including those for reading joystick ports, produce sounds, set and read the time and produce random numbers. Fully compatible with disc or tape filing systems and works in any mode. Package comes complete with a USER GUIDE, Introduction to FORTH and 16K GFORTH ROM. £43(d)

DISC DOCTOR Computer Concept's popular disc utility rom which adds 20 commands to the DFS system. £27(d)

DISCMASTER Beebug's a disc utility rom which provides additional DFS commands and utilities including disc menu to automatically RUN/*RUN programs, converting 40 track discs to 80 track and enable dual catalog. £16(d)

EXMON II Updated version of the EXMON rom with facilities including dual screen operation and full screen memory editor. £24(d)

TOOLKIT This ROM adds 27 new commands to the BBC BASIC. These include a full screen editor, merge, relocating data in memory, program compactor, listing of variables and memory search. £23(d).

SLEUTH A debugging tool for BASIC programs which includes features like single stepping of dual screen programs, and accelerator to run programs from full speed to freeze frames. £24(d)

GRAPHICS ROM Adds 28 new graphic related commands and features include sprites, turtle graphics, rotation, scaling, 3D plotting all using "*" commands. £27(d)

PRINTMASTER This ROM features the most versatile screen dump for EPSON MX/RX/FX80 and Kaga 810 printers. It supports three types of dumps. The first allows any graphics on the screen to be dumped. Colours appear as shades of grey. Any part of the screen can be printed at any position on the paper in any one of four orientations. The screen dump may be magnified by any factor x2, x3, x4 etc. A special feature allows true MODE 7 screen dumps with TELETEXT text & graphics. The second dump allows any text to be dumped whilst the third dump will print the contents of a file on disc whilst the computer is doing other things. This is not all. All printer functions can be called up using the *command. *DEFINE allows the printer to define his own characters and store them. *GPRINT allows printing of enlarged text in any position, orientation, size & shade. *WINDOW allows windows to be defined in any size and position on the screen. Can allow you to do printing as background operation while the computer does other jobs. In short this one ROM does it all. £28(d)

DUMPMASTER Disc based program that produces fast machine code routines for a variety of printers incl. EPSON MX/FX, STAR 910, Seikosha, NEC PC8023, INTEGRIX 132A. Dumps in 8 shades in any mode including teletext mode. Snapshot facility allows dumps from games and other programs. £10(d)

MUROM Sound Extension Rom: Helps you create your own tunes and sound sequences either with MUROM's editor and a musical score or using the keyboard to simulate a piano. Edit your creations with the full screen music editor and then switch to envelope editor to tailor the tonal quality and select instrument type. Incorporate the music into other programs or playback with or without MUROM. Instant sound effects can be called from Basic eg *ZAP, *SIREN, *EXPLODE etc. £24(d)

BILLBOARD A useful program that enables your BBC to produce super-large "Billboard" type characters i.e. a continuous horizontal scrolling of super-large characters. Supplied in ROM. £16.50(d).

HELP Rom based comprehensive on screen HELP facility to aid and speed up programming. £21(d)

Write for details on specification and availability of the following packages expected to be released shortly:

Basic Compiler Comal 6502 Development Package

MICROTEXT This authoring system developed by the NPL allows production of a wide range of man-computer dialogues. User can draw up a frame made up of text/graphics and combine a series of frames to create modules which are incorporated into a program. An expert in any field can create complete courses of computer based instruction material. Applications include interviewing systems, teaching packages, training courses and interactive demonstrations and simulations. Disc £53(b) Cassette £43(b)

REPLICA II 40 & 80 Track Versions available. £10.35(d)

BROM — the new utility ROM from Clares — a Toolkit ROM that gives you full screen editing. Many extra functions are included. £30(d).

DESIGN Design is a second processor which allows information to be displayed in a format suitable for demonstrations, slide projections, handouts or presentations. Graphs, Pie Charts & Bar Charts are quickly produced; automatically drawn & scaled. Versatile labelling facility, 25 User defined, 4 large macro characters plus screen dump facilities included. £16.50(d) Disc (80 or 40 Track).

SUPERPLOT Superplot is ideal for screen representations of mathematical functions. It will plot on automatically scaled axes, in Cartesian, Polar or Parametric co-ordinate systems and will allow overlapping of graphs. Cass £8.50(d).

CP/M SOFTWARE FOR TORCH Z80 ACORN Z80 PROCESSOR

We can now supply almost any CP/M based software package in a format suitable for the Torch Z80 and Acorn Z80 second processors. The following are generally available from stock.

DBASE II £335(a) WORDSTAR PROFESSIONAL £380(a)

WORDSTAR £275(a) DBASE II Tutorial..... £32(c)

PROPASCAL £220(a) Supercalc 2 £200(c)

Phone for your specific requirements.

Please specify the type of format (TORCH or ACORN) required.

SPELLCHECK I Menu driven spelling checker for Wordwise or VIEW. Dictionary contains 6000 words and is expandable to 1700 on 100K disc. £16.50(d) Disc (80 or 40 Track) Specify whether Wordwise or VIEW.

MASTERFILE II The new version of the popular general purpose file management system. It allows large amounts of information to be stored and processed. It is extremely powerful yet flexible to use. The disc version allows up to 17 fields per record, and the only limitation as to the number of records is the capacity of the disc. Typically, using 5 fields, about 2000 records may be stored on a 100K disc. This latest version features many new facilities including use with WORDWISE/VIEW £16.50(d) Disc (80 or 40T).

HERSHEY CHARACTER font generator: Disc based menu driven package with 1500 new characters made up from 9 different Hershey character fonts. Flexible utility allows choosing of any characters and appending them to users programs. Screen dump routine for Epson printers included. £12.50(d).

When ordering software on disc please specify track format (40/80)

Your standard BBC Micro
will have this many RAMs.

Upgrade your BBC Micro and you'll have this

That's right, a massive 256 Kilobytes of Random Access Memory, plus hardware and disc compatibility with the U.K.'s number one personal computer, the IBM®PC.

Just think of the potential for your Model B. The opportunity to explore the vast range of IBM®PC compatible programming aids, languages and business software packages, which are already established as 'State of the Art' and are destined for a growth pattern previously unknown in the Industry.

And they'll be IBM PC

To take full advantage of this high calibre software support the Torch Graduate incorporates twin 360K floppy disc drives and two IBM®PC compatible expansion slots, thus making available options such as local area networking, ideal for business and educational applications or auto-dial/auto-answer comms modems, linking up with viewdata and electronic mail services such as Prestel and Telecom Gold.

As an added bonus, we even start you on your way with the PSION XCHANGE integrated software package comprising, word processing, financial planning, graphics and database management programs, specifically developed for the colour version IBM®PC.

BBC Model B owners, this is your day of reckoning!

KAGA KP810

This new Japanese printer has EPSON FX/RX
compatible control codes and is functionally
equivalent to an FX80 with the added advantage
of its 'Near Letter Quality' mode. It is solidly built
and features include: Normal, Italic, Enlarged,
super/subscript, proportional spacing and
user-defined character set. Extras over the FX80
included in the price are Near Letter Quality
(NLQ) print ideal for correspondence, Proper
adjustable tractor feed, half speed quiet mode
and 3K buffer. The printer is bi-directional and
logic seeking to give a speed of 140CPS for high
throughput in conjunction with the standard 3K
buffer. 8K RAM may be added to give more
user-defined character sets. Centronics parallel
interface + Watford's 12 month NO QUIBBLE
WARRANTY.

Special Offer: ONLY **£249** (£7 carr.)

RS232 interface + 2K buffer to connect to other
micros. **£89**

KAGA KP910 Printer

Similar to the KP810 but with 17" carriage for
wide print. Gives 156 columns of normal print or
256 columns in condensed mode. Ideal for
printing out spreadsheets.

ONLY **£339** (£7 carr.)

PRINTER LEAD

Centronics lead to connect BBC micro to
EPSON, KAGA, SEIKOSHA, NEC, STAR, JUKI,
BROTHER, SHINWA etc. printers.

Standard length (4 feet long)	£7
Extra long (6 feet long)	£9

3M - 5¼" DISKETTES

Top quality 3M - SCOTCH Diskettes from Watford Electronics (Your 3M Appointed Distributors). All discs carry a lifetime warranty. These discs are quiet in operation and insert positively with their reinforced hub rings. Boxes of 10 supplied complete with self stick, disc labels and write protect tabs.

DOUBLE DENSITY DISC INTERFACE

SIMPLE but SOPHISTICATED

We are proud to bring to you the Watford Electronics Double Density Board for the BBC Micro.

The DDFS supplied is a new version of the popular Watford Electronics DFS re-written to make full use of the capabilities of the new double density controller.

- Increases storage capacity of your Disc Drives by the maximum physically possible, 80% !!!
- Our system will use the whole of an 80 track drive. Inferior systems do not allow files longer than &3FFFF bytes, but with our system files can be as long as one disc side.
- Discs may be created in either single or double density format with the built in formatter and in single density mode are fully compatible with normal Acorn format discs.
- The density of the disc you put in is automatically sensed by the system and you are informed of the density in the catalogue display.
- The double density system is of course faster than single density.

The Watford Electronics DDFS implements an extremely comprehensive 8271 emulator so that commands passed through OSWORD & 7F are correctly interpreted. Other manufacturers thought that read and write sector alone were sufficient - we decided to implement every command of the 8271 that was physically possible. We have allowed the use of all the special registers including bad tracks, allowed access to deleted data etc., etc. The emulator itself takes up around 1K of compactly written machine code. We reckon it will run many of the protected discs now available. Gain all the advantages of the WE DFS together with much increased storage and compatibility with many existing protected discs.

(please write-in for full technical specifications)

Complete Unit incl. DDFS ROM **£85**
DDFS Manual **£6.95** (no VAT)
We will exchange your existing Single Density Interface for our DDFS Unit for **£49** (Carriage £1.50)

THE ULTIMATE DFS

Watford are proud to be able to supply both SINGLE and DOUBLE DENSITY versions of their highly acclaimed Acorn compatible DISC FILING SYSTEM.

Single Density DFS runs Acornsoft's ELITE.

What do the independent press say?

"Good value for money" - Beebug
"A very worthwhile package" - The Micro User
"You'll be buying a very powerful package" - Personal Computer News
"Superior DFS; Excellent disc sector editor" - Computer Answers

Without a doubt the most sophisticated DFS software yet written for the BBC microcomputer. This powerful DFS is fully compatible with the ACORN DFS, yet has much increased power due to the additions, carefully designed to make life easier in normal use. It consists of 16K of efficiently written machine code. It is entirely self contained and so does not require a utilities disc to function.

SPECIAL OFFER

- DFS (Disc Filing System) ROM only **£18**
 - Complete Disc Interface Kit
Incl. DFS ROM & fitting instructions ... **£89**
 - Acorn's DFS Kit complete **£86**
 - DFS Manual (comprehensive) **£7**
 - We will exchange your existing Acorn DFS for Watford's ULTIMATE DFS for . **£14**
- P.S.
We will exchange your existing ACORN DFS for Watford's highly sophisticated DFS ROM for **Only: £18**

Watford's DFS is exclusively available from Watford Electronics. We DO NOT retail this product through dealers. Every ROM carries a printed label with our LOGO and a serial number.

THE FEATURES OF WATFORD'S SINGLE & DOUBLE DENSITY DFS.

- The system can either use the ACORN standard 31 files per disc side or DOUBLE THE NUMBER to 62 files. The size is selected at formatting time. Copying between discs with different catalogue sizes works perfectly normally.
- A FORMATTING PROGRAM is built in, permitting formatting to 35, 40, 80 track formats with either 31 or 62 files. Since the formatter is built into the DFS it can be used without affecting whatever program you are using.
- A DISC VERIFIER is also built in. This checks the internal checksums on each sector to identify any corrupted data. This is extremely useful when saving valuable data as it shows faulty discs quickly and easily. Again it does not affect the program you are using.
- A built in DISC SECTOR EDITOR gives a screen window onto the disc enabling detailed editing of any byte on the disc. This is extremely useful for recovering accidentally deleted files and can save weeks of work.
- A double step mode allows the user of 80 TRACK DRIVES TO READ AND WRITE BOTH 40 & 80 TRACK DISCS. This mode is software selected for each drive individually, thus allowing a 40 track disc to be copied onto an 80 track one very easily. THIS ELIMINATES THE NEED FOR EXPENSIVE SWITCHABLE DRIVES.

- A WORKFILE function sets the name to be used when the null filename is issued. This allows a program to be edited and repeatedly saved having only typed its name once. Automatic increment function SAVES successively numbered versions of a file, every time SAVE is used.

- When using LOAD, CHAIN etc., it is possible to specify an ambiguous filename. This will result in the first file whose name matches the specification being used. This saves typing the end of a filename that you know is uniquely identified by its first few characters.

- Two commands exist to simplify the transfer of programs from TAPE TO DISC. These load the file to &1100, switch off the disc system and then move the file to its correct load address, thus saving a lot of complicated programming. This command can be used to load files upto 27.75K long.

- An advanced COPY command is included which will prompt the user, requesting whether to copy each file.

- RENAME has been extended to allow the use of ambiguous filenames. This allows you to change BERT1, BERT2, BERT3 to FRED1, FRED2, FRED3 with only one command, much as you would on a mainframe!

- OPENOUT has been improved to give you fewer annoying 'Can't extend' errors, as it automatically picks the biggest space on the disc in which to put a file. A SPACE command lets you know how much space *COMPACT will create before you waste time compacting and possibly losing your program.

- 2K of RAM can be reclaimed from the DFS by setting "PAGE" to &1100.

- The DFS is fully compatible with TELETEXT, TORCH and both ACORN Second Processor systems. Discs prepared with the Watford DFS can be used under ACORN DFS without any changes, so there are no problems in exchanging software with ACORN DFS users.

- A comprehensive and clearly written manual is available separately and this explains both the standard ACORN functions and the extra WATFORD features.

LOCKABLE DISK STORAGE UNITS

Strong plastic cases that afford real protection to your discs. The smoked top locks down. Dividers and adhesive title strips are supplied for efficient filing of discs.

M35 holds upto 40 discs **£13**

M85 holds upto 95 discs **£17**

FLOPPY HEAD CLEANER KIT

The heads in a floppy disc drive are precision made and very sensitive to dirt. Drive manufacturers recommend that you clean the heads approximately once a week. Unless your home or office is dust free one of these kits is a very sensible precaution against losing valuable data. A dirty head can destroy many disks before you realise the trouble. Very simple to use.

Only **£9**

PLASTIC LIBRARY CASES

for Disc Storage 5¼" (holds 10) **£1.80**

BBC MICRO WORD-PROCESSING PACKAGE

A complete word-processing package (which can be heavily modified to your requirements, maintaining the large discount). We supply everything you need to get a BBC micro running as a word-processor. Please call in for a demonstration.

EXAMPLE PACKAGE

BBC Model B, Watford Electronics' DFS upgrade, WORDWISE ROM, Twin 200K Teac drives in beige, Zenith 12" Hi-resolution monitor (Green or Amber), Brother HR15 daisywheel printer, Gemini software: BEEBCALC spreadsheet, analysis and DATABASE software on disc. 10 x 3M disc, 500 sheets fan-fold paper, 4 way mains trailing socket, manuals, all leads and BBC carrying case.

NEW LOW PRICE

Only £1,089

We stock a range of monitors to suit all needs. Choice of a monitor is a matter of personal taste so we recommend that whenever possible, you ask for a demonstration at our shop.

MICROVITEC

- 1431 - Medium resolution as used on the BBC television computer programme £165
- 1451 - High resolution, suitable for word processing in mode 0 £237
- 1441 - High res, exceeds the capabilities of the BBC micro £385
- 1431AP RGB + PAL and AUDIO £199
- 1451AP RGB + PAL and AUDIO £305
- Dust Cover for Microvitecs £5.50

All Microvitec Monitors are 14" RGB in their distinctive right angle sturdy metal case or the new beige plastic case. They are supplied complete with connecting lead to the BBC and a 3pin mains plug.

KAGA

- KAGA Vision 2 High Res. Colour £225
- KAGA Vision 3 Super High resolution, Colour £310

Kaga Monitors are 12" RGB colour units housed in an attractive beige plastic cabinet. They all have as standard, a genuine etched anti-glare screen.

ZENITH

12" Ultra high resolution monochrome monitor. Ideal for word processing as its green or amber screen is very restful to read. The high resolution makes it good for games too - you can really see the detail that has been put into the graphics ONLY £68

LEADS

- BNC Lead for Zenith or Philips £3
- RGB lead for KAGA £5
- N.B. Carriage on Monitors £7 (securicor)

SWIVEL BASE FOR MONITORS

Only £15

DISC DRIVES PRICES SLASHED

(NEW SLIM-LINE DRIVES)

(DRIVES Cased with Cables. No PSU. Connects directly to the BBC's power socket.)

- **CLS 100** Single, TEC Single sided 40 track 100K, 5 1/4" Disc Drive £89
- **CLS200** Single EPSON Drive, Double sided 40 track, 200K, 5 1/4" £99

- **CLD800** Mitsubishi/Epson Double sided 80 track 800K, 5 1/4" TWIN Drives £235
- **CLD800S** Mitsubishi/Epson Double sided 40/80 track switchable, 800K, Drives £299

(CUMANA) DRIVES CASED WITH PSU & CABLES

- **CS100** TEC Single sided 40 track 100K 5 1/4" Single Disc Drive £119
- **CS200** Epson Double sided 40 track 200K 5 1/4" Single Disc Drive £149
- **CS400** Mitsubishi/Epson Double sided 80 track 400K 5 1/4" Single Drive £165
- **CS400S** Mitsubishi/Epson Double sided 80 track 400K 5 1/4" Single Drive £179
- **CD200** TEC Single sided 40 track 200K 5 1/4" TWIN Disc Drives £236
- **CD400** EPSON Double sided 40 track 400K 5 1/4" TWIN Disc Drives £280
- **CD800** Mitsubishi Double sided 80 track 800K 5 1/4" TWIN Drives £339
- **CD800S** Mitsubishi Double sided 40/80 track Switchable 800K TWIN Drives £350
- SPARE DRIVE CABLES, SINGLE £6; DUAL £8
- DFS Manual (comprehensive) £7 (No VAT)

(Carriage on Disc Drives £7 securicor)

P.S.

● You do not require a formatting Disc nor the expensive 40/80 track switchable Drives when using Watford's sophisticated Disc Filing System which has this facility as one of the many facilities incorporated in it as standard.

Cont.

● MITSUBISHI & EPSON Slimline 400K Disc Drives that we supply are Double sided Double Density, 1 Megabyte unformatted, (With BBC Micro 400K after formatting). When used in conjunction with our Double Density Interface, you obtain 725K formatted. Track density is 96 TPI, track to track access time is 3mSec. These drives are very fast, quiet and efficient. We strongly recommend them.

● Extensive test carried out in our workshop has proved that the BBC Micro's own switchmode power supply is capable of driving 2 disc drives and a host of Sideways ROMs without undue heating. We recommend our CLS & CLD range of Disc Drives which will save you considerable expense without sacrificing performance.

● Please send an SAE, for further technical specification on our Disc Drives.

DUST COVERS

(For our Disc Drives)

Single (without PSU)	£3.20
Twin (without PSU)	£3.85
Single (with PSU)	£3.25
Twin (with PSU)	£3.90
Twin (side by side with PSU)	£3.95

DISC ALBUMS

Attractively finished in beige leather-look vinyl, these conveniently store up to 20 discs. Each disc can easily be seen through the clear view pockets.

£4.25

FORTH ROM for BBC

This ROM provides a complete implementation of the FIG-FORTH standard (including editor). Supplied with a large tutorial manual at only £32

TINY PASCAL for BBC Micro £54

All prices exclusive of VAT

MYSTERIES OF DISC DRIVES & DFS REVEALED

Are you tired of faulty cassettes, and lengthy loading times? Do you want to upgrade your BBC micro to take discs but you get tied up in the plethora of jargon surrounding the choice and use of these systems.

For instance, what is the difference between single and double density formats, how can you use a 40 track disc on an 80 track disc drive? What is the difference between a DFS and disc interface kit? Should you acquire a single Disc drive or twin? What does 48 TPI and 96 TPI discs mean? These are just a few of the questions you may have asked yourself and never found the answer or maybe you have yet to encounter these questions.

Now the mystery of buying a suitable interface and disc drive for your BBC micro is revealed in Watford Electronic's new book entitled 'MYSTERIES OF DISC DRIVES & DFS REVEALED'. It describes in fine detail, yet remaining very readable to the beginner, how disc drives operate, the type of interfaces available, which type of discs to use on a disc drive and how data is stored on the discs.

There is even a handy section describing the phrases you are likely to encounter, and how to interpret them. This book must be an essential purchase at £5.95, especially if you own or are thinking of buying a disc system.

£5.95 (Book No VAT)

THE EPSON FX/KAGA PRINTER COMMANDS REVEALED

for the BBC Microcomputer
(The only Printer Book for the Epson FX-80
compatible printers).

So you bought yourself a new printer, because the salesman in the shop showed you how clever it is and impressed you with all sorts of printouts to show its capabilities – he may even have offered you a special price.

However, now that you have got it home and connected it to your BBC microcomputer, you are wondering how to make it perform these magical tasks. The manual seems to give no clues, and when you type in the example programs, the computer throws the LPRINT statements back in your face.

Now what do you do, when this £400 piece of high technology refuses even to move its head, and you have stayed up until 2 in the morning with copious supplies of coffee, desperately trying to print something out. Once again, Watford Electronics comes to your help with our new book entitled 'THE EPSON FX/KAGA PRINTER COMMANDS REVEALED'.

This book describes in plain, easy to understand English how to use your printer (Kaga KP810, Canon PW1080A, or any other Epson FX-80 compatible printer) with the BBC micro, both from Basic and your Wordwise wordprocessor.

It describes in detail how to obtain the maximum in graphics capability from your printer and includes full indexes allowing you to cross index the numerous commands. Every command is explained in detail, with an accompanying BBC Basic program and an example of its use from Wordwise.

This book is superb value at only
£5.95 (Book – No VAT)

EPSON FX/RX NEAR LETTER QUALITY PRINT ROM

Impress your friends and business colleagues with the quality of your letters and printed material with Watford's very simple to use EPSON NLQ! (Near Letter Quality) ROM. Suitable for FX80, RX80, RX80F/T, FX100.

Look at the features:

- Simply type *NLQ80/100 and a single VDU code to use NLQ print.
 - NLQ is then available without any modifications from BASIC, WORDWISE, VIEW (with NLQ DRIVER) or virtually any other program or language.
 - Single codes select PROPORTIONAL type (yes even on the RX80); ENLARGED type; UNDERLINED type. These features can be used separately or in any combination.
 - Full UK character set.
 - Standard 'pica size'
 - Proportional spacing
 - Enlarged
 - Underlined
 - Normal type
- The NLQ ROM is incredibly easy to fit and use. Supplied complete with Manual.

Only: £20

DUMPOUT 3 NOW WITH EXTRA FEATURES!

A highly sophisticated screen dump ROM. This has to be the most flexible and powerful screen dump ROM yet produced for the BBC micro. It will put on paper anything you see on the screen, including all Mode 7 facilities etc. We have to admit that there is one facility that we cannot replicate – if anyone can supply flashing ink we would like to know!

The ROM also provides window setting utilities and two new OSWORD calls that allow mode 7 graphics pixels to be read and plotted using the standard graphic co-ordinate system. The latest version includes a graphic dump trigger for dumping screens from games whilst they are running.

Two commands are used to operate the dump routines:

*GIMAGE – This provides a full graphics dump of any Mode (including Mode 8). There are many optional parameters but you need only specify the parameters you wish to change.

● V <scale>, H <scale> – These 2 byte numbers give fine control over the size of the dump from minute to enormous. Unlike other dump ROMs, scale works the same in all modes inc. mode 7.

● R <0-3> – Print dump rotated by 0, 90, 180, 270 degrees.

● I <indent> – Set gap from left edge of paper.

● X <min><max>, Y <min><max> – Selects screen area, by default the whole graphics window is dumped.

● P – Dump shows physical colour values.

● G – Grey scale reproduction, dumps otherwise use a negative scale (white prints darkest).

● T Two tone dump for maximum resolution.

● M <mask> – 8 bit colour mask.

● E – Contrast expansion to make mode 7 text and separated graphics stand out clearly from the background.

● C – All mode 7 graphics are printed as contiguous to improve the shading in graphic areas.

● K – Key-triggered dump. The dump does not commence immediately, but can be triggered off later by pressing <SHIFT><0> or <CTRL><ESCAPE>.

● S – Switch-triggered dump. As K, but the trigger is an external switch (not supplied) connected to the user port. The S option can still work with games that corrupt RAM page D.

*TIMAGE <indent> – Does a fast, text only, dump of the contents of the text window in any mode.

*GWINDOW and *TWINDOW – These commands draw the graphics and text windows, respectively, on the screen and allow them to be changed with the cursor keys. Note that GIMAGE and GWINDOW work fully in mode 7. Designed for use with the following printers: CP80, GP80/100/250, CANNON, STAR, KAGA/TAXAN, NEC, SHINWA CP80, GEMINI, EPSON MX/RX/FX, LPVII, NEC PC8023, DMP100/120/200/400, etc. etc.

Price including comprehensive manual

VIEW/VIEWSHEET PRINTER DRIVER for SILVER REED

(Officially approved by Silver Reed)

A range of VIEW Printer drivers to complement the Silver Reed range of printers EXP400/500/550 & 770 and converted typewriters EX43/44 & 55.

Only: £7

BEEB PRINTER ROM

This utility ROM is designed to simplify using all the facilities of your printer. It has many facilities:

★ Selection of printer modes such as underline, font and size is by 'Single Key' operations.

★ From Wordwise, a single number following OC will select a mode rather than a long and incomprehensible string of control codes. This makes using your printer with Wordwise much more convenient.

★ When using Basic (or other languages) you can have control over the formatting of the output to the printer in the style of a wordprocessor. You can define page top, bottom and side margins etc with intelligent page skip for binders an option. All supported printers will now respond to form-feed etc. commands.

★ User defined characters are printed as you see them on the screen so that non-standard characters are automatically printed out correctly.

★ Commands select the options for the following printers: GP100, STAR, NEC, MX/FX, KAGA, LP/VII/DMP100, DMP200.

Operates with either parallel or serial interfaces.

★ Supplied with a 50 page manual that is very comprehensive and easy to follow. Please specify printer type when ordering so that we can send the correct function key strip.

Price: £24

TWO DATABASE MANAGEMENT SYSTEMS

DISCDATA

Discdata is an entirely disc based database handling system. It is extremely easy to use through its comprehensive menu system. The simplicity is such that we do not feel the need to provide explanation on use in the written guidance supplied with the program. The first-time database user will rapidly become familiar with this package designed throughout to be simple and obvious.

Despite the ease of use this system provides all the facilities needed for complex data handling problems. The length of database that can be handled is only limited by the total space on the disc. You can have up to 20 fields with page length records up to 254 bytes in length. Adding and deleting records, amend titles, field names and records. Sort on any field and search for any record or group of records in any field. The database may be re-formatted after creation, the system will re-write all your files for you automatically. You may add extra fields and extend the length of existing fields freely.

Output formatting is very powerful. You are allowed 40, 80 or 132 column output modes going to printer or screen. Selected fields can be put in any order on the screen or printer, either across the paper or down. Output can start or stop anywhere in the file. Decimal fields are automatically totalled and records output are counted. Version 2, now on sale has improved input and amendments procedures giving full record edit as well as the 3 extra features.

String searching. Calculations on numeric fields, and the ability to create sub files from your main files.

On disc at **Only £17**
(Please specify 40 or 80 track when ordering)

FILE-PLUS

The File-Plus package is even more powerful and flexible than Disc-Data. It is also largely menu driven but has its own command language for file searching. The 16K ROM contains all the normally required routines, with lesser used options supplied on the utilities disc. All input and output formatting is controlled through screen forms. A full screen editing system is used to define a form which allows tremendous flexibility in the format in which your data is displayed. It is very easy to change from form to form so that you can type in your data with one form, and examine it with others. You will typically design several forms before starting to access the database so that you can quickly and easily see the fields of each record that you want to appear in the layout you decide on. The form system is also used for output to your printer. File Plus has a unique file linking system that allows the entire on-line storage of your system to be used for one database. This can give around 1.5 Megabyte databases using dual drives and double density.

The built in FQL (File-Plus Query Language) can be used for searching the database. Presented in the form of a powerful command language with looping facilities etc. this allows the most flexible access to your data possible. Full arithmetic operations are provided to allow the system to be used for statistical analysis.

Cont.

Operations supported are —, +, *, /, +—999999
9999.9999 and compare facilities =, >, <, >=,
>=, < &.

Many keywords are supported by the language: assign, compare, display, and, goto, iff, ift, print, read, search, spool and update.
Supplied with a very detailed 70 page manual to explain all the facilities with many examples.

Only £43

(Please specify 40 or 80 tracks for the utilities disc)

Special Offer: **£110**

PEN PAL—VERSATILE LIGHT PEN SOFTWARE

Do you have a light pen that never gets used? Then this piece of software is for you. This package offers many useful facilities that make the light pen a useful device to own. Facilities included are:

- Pixel, Line and Character definition
- Free hand drawing
- All Colours
- Fill, Refill and stripes
- User defined "Brush strokes" plus character definer
- Grid, Scale and perspective aids 2 to 200 points palletable in one design with Circles and "rubber banding"
- Move design/character to any screen position
- Save and Load screens. User defined characters and line drawings for video titles, own programmes etc.

This program has many uses in education and at home. It is supplied with a comprehensive instruction manual.

Works with Watford, RH, Acorn User, DIY and many other Light Pens.

Prices
TAPE **£11**; DISC **£12**

LIGHT PEN

This Light Pen for the BBC micro is packaged in a neat pen shape with built in switch. Supplied complete with our sophisticated Pen-Pal software on cassette (see elsewhere in this ad).

Only £20

(For software on disc please add £2)

DISC EXECUTOR

Disc Executor is a sophisticated disc utility for the transfer of your cassette programs to disc. If you have difficulties transferring your cassette software to your disc system then this is the answer. It handles 'locked' files and full length adventures (up to 8&e blocks) and programs that load below &E00. It is very simple to operate with instructions supplied. It saves you time and money.

Price £10

(Please specify 40 or 80 track discs)

ADE

'Systems' complete program development package in a 16K ROM. Full assembling and debugging facilities provided.

SPECIAL OFFER ONLY £43

ROM MANAGER

'Provides comprehensive management of all your installed ROMs — BEEBUG Nov. '84'. This ROM is unique in its capabilities. It allows you, the user, full control over the BBC Micro's sideways ROM paging system with simple to use commands. This ROM is essential for those with several ROMs. At a simple level ROM

MANAGER can be used to remove the problem of clashing command names and allow full use of all the facilities of your ROMs. This is coupled with facilities to completely enable or disable various ROMs in the machine including ROM manager itself.

ROM MANAGER can also be used to develop sideways ROMs using the machine's standard memory. This is achieved by sending sideways ROM calls to your code in RAM, saving the expense of fitting sideways RAM for ROM development purposes. ROM status reports are also given by the ROM, including ROM lengths, checksums, entry points supported and current filing system title.

The ROM also provides facilities to examine ROMs, list function keys for editing, modify RAM (using a HEX/ASCII editor) and list ROM titles neatly and concisely.

All selection between particular ROMs is by the name of the ROM and this may be abbreviated for convenience. ROM numbers can also be used if required. This ROM is very simple and obvious to use. All the facilities are explained in the clear and detailed manual.

Price £22

BUFFER & BACKUP ROM

For those with sideways RAM fitted in their machines this utility ROM will make full use of this facility. By using the sideways RAM area for extra memory the following features are implemented:

- ★ 4K or 16K buffer for parallel printer.
- ★ Dumps selection of Disc files to Tape.
- ★ Makes backup copies of tapes on to tape and disc.
- ★ Displays contents of paged ROMs on screen.
- ★ Menu display of ROM filing system contents on Shift-Break.
- ★ Comprehensive manual.

Only £22

BEEB MON

Watford's own Machine code Monitor ROM written by Andrew Bray (Cambridge), co-author of the BBC Micro Advance User Guide.

The most powerful and versatile machine code monitor ROM yet written for BBC Micro. It has all the normal memory editing, moving and relocating facilities, plus all editing is with a full screen editor allowing scrolling up and down memory, entering in Hex, ASCII or standard assembler mnemonics. In use as a debugging tool, you run code under a total emulation system. Ever felt a desperate urge to set a breakpoint in ROM? No problem - you can even have breakpoint on reading or writing locations in memory and on register contents. The system fully supports debugging of sideways ROMs e.g. BASIC can fully and easily be run from within Beebmon and from there DFS and other sideways ROMs can be used in total emulation mode. Beebmon can even run itself. In so doing you can nest Beebmon up to a level limited only by the memory size. Beebmon uses 256 bytes of workspace, located anywhere in memory, even on the 1MHz Bus. Beebmon effectively uses no zero page workspace, so your program (e.g. BASIC) can use any or all of the base page. How does it achieve this? By providing a 6502 interpreter all programs running under it exist in a virtual BBC, so special memory locations like the ROM latch are not actually accessed by your programs, instead they alter a location in Beebmon's workspace. Emulation also allows immediate return to Beebmon command level by ctrl-escape no matter what code is being executed at the time. All this exceptional power and flexibility is complemented by a clear and detailed manual included in a value for money price of:

£22

Disassembler Rom

Discover the hidden secrets of BASIC and the OPERATING SYSTEM with this easy to use programmers tool.

A ROM based machine code Disassembler for the BBC micro. It enables machine code programs to be listed in BASIC/DUMP format and thus is the perfect complement to the built in assembler. It allows Sideways ROMs, files on disk or tape to be listed, and also has a comprehensive editor, allowing mnemonics to be altered directly, as well as HEX, DECIMAL ASCII and BINARY memory editing. There is also a full set of labelling facilities available (up to 3,200 labels), with the major locations and routines already labelled. Thus DIS-ASM enables any monitor program, such as BEEBMON to be used to much greater effect as it is not necessary to disassemble memory each time the display is altered.

ONLY £18

32K RAM EXPANSION BOARD

Now Watford Electronics brings you the latest state-of-the-art MEMORY EXPANSION BOARD for your BBC microcomputer. It simply plugs into your micro's 6502 processor socket. (No soldering required). This compact board which fits inside the computer doesn't just give you 16k or even 30k of extra RAM, but a massive **32K !!!** There are many more useful facilities available with this board:

- The top 20K of the expansion RAM can be used as the screen display memory, leaving all the standard BBC RAM free for programs or data storage. This allows good graphics and long programs to be combined. For instance you could have **MODE 0/1/2 GRAPHICS AND 28K OF PROGRAM SPACE**. The extra memory can be used by virtually any language or utility such as BASIC, VIEW, WORDWISE, etc.

- The **FULL 32K** or the bottom 12K of the expansion RAM can be used as a **PRINTER BUFFER** for SERIAL or PARALLEL printers, sound channels, RS423, Keyboard or Speech Synthesiser. This allows very long text files to be printed while you are using 28K of program and 20K of graphics! **THE BUFFER IS UNIQUE** because it replaces one of the BBC Micro's buffers so all the buffer options are available on it. e.g. *FX15.21.138, 145, ADVAL (-no.) etc.

- This board is the ideal complement to any word processing system, disc or cassette based. There is no need to wait for slow printers as you can type in long text in 80 column display mode while printing is going on - **TWO JOBS DONE SIMULTANEOUSLY!!!** (an equivalent printer buffer would cost you £120 +)

- Unlike our competitors, the board is compatible with a vast range of software and hardware available for the BBC microcomputer, including our ROM expansion board, double density DFS Units and the ATPL ROM extension board. This is because our board is connected to the computer by means of a ribbon cable without soldering. It can be either be left in the micro or stuck to the lid with the 4 self adhesive feet supplied.

- The board comes with a comprehensive manual and ROM based software with a large range of commands for machine code and BASIC users, including many *HELP messages.

Only: £65

GRAPH PAD

With this popular British Micro's Graph-pad, you can add new dimensions to your computer enjoyment. It helps you to create your own application programs by the simple use of the Graphpad. Ideal for Educational use. Supplied complete with Cables, Manual and a two program cassette.

SPECIAL OFFER £86

BEEBFONT ROM

BEEBFONT is a remarkable and different concept in BBC software supplied on a 16K ROM. It allows you to display text on the screen in 13 different styles:

It works in modes 0, 1, 2 and 4 using the full colour capabilities of each mode. Characters are printed in the same way as normal. Selection between the various fonts is very easily achieved with Ctrl-V - press this followed by a font number and the output will continue in the new font. Beebfont ROM is particularly useful in display work with the characters produced at twice the normal size. You can create your own character fonts with the editor supplied. You can also print-out pre-formatted text files using the special characters with Epson FX, RX and NEC printers. The full range of character styles can be used, controlled from within the text. The editor and spooler program are supplied with the package, on cassette or disc. The spooler allows word processor (Wordwise & View) output to be printed in the new characters. A twenty page manual is supplied. Please state printer type and media for the editor & spooler when ordering (cassette, 40 or 80 track disc).

SPECIAL PRICE
ONLY £32

Mk-2 13 ROM SOCKET EXPANSION BOARD

Now all lines fully buffered - On board battery back-up facility - will now accept EPROMS 2716, 2732, 2764 & 27128 and ROMs 6116 & 6264.

Simply plugs into one of the four ROM sockets currently available in BBC Micro. There are only 5 solder connections to be made. Full instructions are supplied. Unlike other ROM Boards, this board has been ergonomically designed to enable the user, easy further expansion inside the Micro, e.g. Double Density Board, Torch Board, RAM Card, etc., without any clash. (At Watford, we think ahead). Our Mk2 13 ROM Socket Board enables the User to increase the sideways ROM capacity from the basic 4 sockets upto full 16 capable of being supported by current operating systems. In addition the board is designed with the facility to hold upto 16K RAM, which when switched into operation is automatically selected by any WRITE signal to the Sideways ROM area. This gives the User the ability to write a utility or language and upon pressing break have the utility or language up and running (new ROM software can be developed and tested in situ.)

The Board gives the User, plenty of freedom to explore the possibilities of the new paged ROMs due in the coming months and offers them the chance to develop their own.

All lines are fully buffered and the board meets or exceeds all timings for operation in the BBC Microcomputer. When fully populated, the ROM Board consumes less than half the recommended maximum current limit.

Supplied ready-built and tested complete with fitting instructions.

Now available from stock **£49**

SIDEWAYS ZIF SOCKET

Now Watford Electronics brings you a ROM board for small budgets or for those of you who do not wish to open up your Micro frequently. It allows you to change ROMs quickly and efficiently with the minimum of effort – no screws to loosen or keyboard to remove. The unit consists mainly of a zero insertion force (ZIF) socket on a small circuit board which is located into the position of the 'ROM Cartridge' and is connected to one of the internal ROM sockets via a ribbon cable.

- Very simple to install. NO SOLDERING REQUIRED. The ZIF eliminates the possibility of damage to your ROM pins when inserting and extracting them.

- The low profile of the socket allows unrestricted access to the keyboard, unlike other cartridge systems. In addition, there are no costly extras, such as ROM cartridges for every new ROM.

- All data and address lines are correctly terminated to ensure correct operation of suitable ROMs with the BBC micro. We also supply a purpose designed see-through storage container with anti-static lining, allowing you to store up to 12 ROMs, protecting them from mechanical and static damage.

- This versatile hardware solves the problem of running out of socket space, simply unplug the ROM and plug in a different one. It is a real must for Professionals and Hobbyists alike.

16K DISC RAM

This is the RAM you've been waiting for!! This battery backed up, write protectable 16K sideways RAM board allows you to run from disk every sideways ROM available. Beware of other sideways RAM boards which are not backed up as certain ROMs will not run in these boards even though the RAM can be write protected. The Battery Backup facility allows retention of DATA after power off. On switch on the Micro will think the WATFORD DISC RAM is a ROM. Features available are:

- No soldering or modifications to BBC micro necessary.
- Plugs into normal ROM socket fitting neatly under the keyboard allowing room for other add-ons.
- Easy to use. Comes with disk based software to SAVE and LOAD ROMs. Allows you to make backup copies of your ROMs.
- Disk software can be copied onto other discs when disc is full.
- All existing ROMs can be stored on disk and used in DISC RAM.
- No messy plugging and unplugging of your ROMs. Simply Load the one you want into DISC RAM.
- Ideal for Professional users to develop ROMs. Backup facility allows testing of final versions without using EPROMs.
- The switch provided allows backup and write protection to be switched off externally.
- Can also be used as 16K printer buffer RAM.

Only: **£39**

P.S. 16K DISC RAM Board is not designed to work in conjunction with a Sideways ROM Board.

Versatile BEEB SPEECH SYNTHESISER Unit

SIMPLY the best! – An unlimited speech synthesis system. Complete with easy-to-follow manual. Controlling software is in ROM so no Cassette Loading problems!

PHONEMES for word synthesis – That means unlimited vocabulary! No extra speech dictionary chips to buy!

BUILT-in Library of approximately 500 words get you started.

ENGLISH accent – Utilises inflexion technique to produce highly comprehensible speech.

EASY to use system – Just plug the software ROM into a socket, the Speech unit into the User Port, and away you go! No specialised 'dealer upgrade' required!

COMPACT unit – The whole system is built in a small case – easily tucked behind the computer. Auxiliary output socket provided for direct connection to an external amplifier.

HOURS of fun! – Suitable for any application Games, Educational Programs, Specialised Packages.

We know this all seems to good to be true but DON'T BE LEFT SPEECHLESS! Order your Versatile Speech Unit now!

Watford brings you

THE AMX MOUSE

'The program is simplicity itself and the user manual is virtually redundant' ... Micro User Jan. 85.

Bring into your home or office the last word in user friendly input devices for the Beeb. The AMX MOUSE that won the hearts and the minds of thousands of visitors at the Show has arrived at Watford Electronics at a very special price!

Using simple Icons, and small movements of the mouse on a work surface, you can select any one of the functions from the pull down menus. The mouse will operate from within Wordwise, View and many other software packages. The three buttons built in to the mouse are user programmable for many extra functions.

The package consists of the mouse, the advanced controlling software in ROM and a disc containing the Icon designer and the AMS ART software (see diagrams).

To summarise this superb product a comment passed by a very senior authority on BBC micro at the last Micro User Show was, 'My only criticism of the product is that, IT'S TOO CHEAP!'

OUR SPECIAL INTRODUCTORY OFFER PRICE

ONLY: £68.50

PLINTHS FOR BBC MICRO AND PRINTERS

Protect your computer from the weight and heat of your monitor. The BBC micro plinths have slots for maximum ventilation. The single plinth is suitable for a BBC and monitor, whilst the double height version provides enough room for our stacked or side-by-side dual disc drives or TORCH Disc pack, to be placed in the centre section. If you use our stacked drives, the remaining space can be used for further peripherals e.g. Speech Synthesizer, EPROM programmer or simply stationery. The computer slides neatly in to the lower section allowing easy access to remove the lid. The printer plinth is equally sturdy but without the cooling slots. It allows for access to the paper from the front as well as from the rear, (a facility not often thought of in similar products) if the paper is located beneath the plinth. This is a very convenient way to work especially if your work area is not deep enough to take the printer and paper separately.

SINGLE BBC PLINTH	£11 (carr. £1.50)
DOUBLE BBC PLINTH	£20 (carr. £2.00)
PRINTER PLINTH	£10 (carr. £1.50)

EPROM PROGRAMMER

The Watford Electronics' EPROM programmer for the BBC micro is a high quality self contained package. Programs all popular EPROMs from 2K to 16K: 2716, 2516, 2532, 2564, 2764 and 27128. All manufacturers' specifications have been followed to program EPROMs at the correct speed - wrong timings could destroy your EPROMs. The unit has its own power supply so does not put heavy loads on the BBC power supply as do some other units. Connects directly to the 1MHz bus following all Acorn recommendations on addressing and bus loadings.

SOFTWARE PACKAGE

The software is supplied on an EPROM which plugs into the Micro and is instantly available with a single command (no time wasting as on Cassette/disc loading). It is a fully purpose designed and integrated package to simplify ROM development. The system is menu driven with many prompts to avoid any accidents.

Software facilities include:

Load File - Save File - Down Load EPROM - Program EPROM - Verify - Blank Check - Editing of memory contents prior to programming.

Also included is an automatic system to allow Basic programs to be put in EPROM and accessed through the *ROM filing system. More than one program may be put in an EPROM. All these facilities and more are explained in the comprehensive and clear 15 page manual.

SPECIAL OFFER £69
(£3 carr.)

LOW COST 'DIN' EPROM PROGRAMMER

A high performance, low cost, self contained 'DIN' EPROM PROGRAMMER for the BBC Micro. Plugs into the BBC Micro's user port.

The features are.

- Will program 2716, 2732, 2532, 2764 & 27128 EPROMs.
- Copy Eprom into memory and compute checksum.
- Blank check EPROM.
- Program EPROM from memory.
- Verify programmed EPROM and display checksum.
- All * commands may be used from menu mode.
- High speed programming on 2764 & 27128.
- Machine code SOFTWARE supplied in ROM.

ANTI GLARE MONITOR SAFETY SCREEN

HEADACHES? TIRED EYES? Don't take pills — Use a Watford Electronics anti-glare filter!

● Made in Britain by a long established glass maker.

Available in 12" & 14" versions — please specify the exact monitor type when ordering.

Special Price: **£15.00** (carr. £1)

SURGE PROTECTOR Plug

Fitted in place of your normal mains plug, this device protects your equipment against mains surges. Nearby lightning strikes, thermostats switching and many other sources put high voltage transient spikes on to the mains. This can lead to data corruption in memory and on disc and can result in spuriously crashing machines. Suitable for computers, Hi-Fi, Fridge Freezers etc. Max Surge current 2KAmp; max Voltage 250. Essential for serious computer users.

Protection for only **£8.50**

FLEXIBLE KEYBOARD CONNECTOR

A 'Keyboard to Micro' replacement jumper lead.

ONLY: £4.95

ATTACHE CARRYING CASE for BBC Micro

The Attache carrying case is attractively finished in mottled antique brown leatherette. The case is made of tough plywood, providing a very solid and safe way to carry your BBC micro. There is room provided to fit all the leads necessary behind the computer and manuals in the front. Locks supplied with two keys. Price **£12** (£2 carr.)

DATA RECORDER AND ACCESSORIES

Top quality slimline portable cassette recorder designed specifically for use with home computers. Mains/Battery operated with tape counter.

£20
DATA CABLE to connect recorder to BBC **£2.50**

DATA CASSETTES

Top grade tested C12 Data cassettes supplied in library cases **35p** each; 10 for **£3.20**.

ASSORTED CONNECTING LEADS

(All ready made and tested)

CASSETTE LEADS 7 pin DIN Plug
to 5 pin DIN Plug + 1 Jack Plug **£2.00**
to 3 pin DIN Plug + 1 Jack Plug **£2.00**
to 7 pin DIN Plug **£2.50**
to 3 Jack Plugs **£2.00**
6 pin DIN to 6 pin DIN Plug (RGB) **£2.50**

MONITOR LEADS

Microvitec RGB leads 6 pin DIN to 6 pin DIN for colour monitors. **£2.50**
KAGA/SANYO Colour Monitor Leads **£5.00**
Monochrome monitor leads BMC to Phono **£3.00**

DISC DRIVE POWER LEADS

Supply from BBC power supply to standard Disc Drive connector
Single **£3.00** Dual **£3.75**

MISCELLANEOUS CONNECTORS

	Plugs	Sockets
RGB (6 PIN DIN)	30p	45p
RS423 (5 pin Domino)	40p	50p
Cassette (7 pin DIN)	25p	65p
ECONET (5 pin DIN)	20p	30p
Paddles (15 pin 'D')	110p	215p
BBC Power Plug 6 way	80p	—
Disc Drive Plug 4 way	75p	—

4 WAY MAINS DISTRIBUTION SOCKET

4 way top quality mains trailing sockets. Supplied wired up with mains plug ready for use. Can be screwed to floor or wall if required. Very useful for tidying up all the mains leads from your peripherals. Allows the whole system to be switched on from one plug

£9.50

THE INVESTIGATOR

This sophisticated Utility program on disc, enables you to make security back-up copies of all your valuable Disc Software. Makes full use of all 8271 facilities to discover the precise format of your protected disc so that an exact copy can be produced. Supplied with detailed instructions. Please specify 40 or 80 track disc when ordering.

Special Offer this month

Only **£20**

CHIP EXTRACTION TOOL

This extremely useful tool allows trouble-free IC removal from your computer. No longer do you have to wield a screwdriver at your valuable ROM software. Instead this IC extractor distributes the removal force over the whole body of any 24 or 28 pin device, thus preventing undue damage to your chips. Isn't £1.50 a small price to pay to protect your ROMs stature?

Price: Only **£1.50**

ADVENTURE GAMES (level 9)

COLOSSAL ADVENTURE	£8.50
ADVENTURE QUEST	£8.50

TEX EPROM ERASERS

EPROMs need careful treatment if they are to survive their expected lifetime. Over erasure of EPROMs very rapidly turns them into ROMs! The TEX erasers operate following the manufacturers specifications to give the maximum possible working life by not erasing too fast. We use these erasers for all our own erasing work.

- **ERASER EB** — Standard version erases up to 16 chips. **£28**
- **ERASER GT** — Deluxe version erases up to 28 chips. Has automatic safety cut-off to switch off the UV lamp when opened. **£30**
- Spare UV tubes. **£9**

VOLTMACE DELTA 14 JOYSTICK SYSTEM

The Voltmace system provides full facilities for connecting the Delta 14 handset.

Delta 14 handset — On its own makes a high quality centre sprung analogue joystick with fire buttons **£12.50**

Adaptor Module allows use of two joysticks and provides hardware to access all the keys on the keypad of the joystick **£12.55**

Transfer program allows use of the keypad keys and joystick to simulate any key on the keyboard. This works by creating a machine code patch that stays in memory while another program is loaded in. Allows any game to be used with joysticks. Supplied on disc or tape.

Tape **£5.10** Disc **£7.95**

STANDARD JOYSTICKS

These are standard analogue type with a fire button on each joystick. Twin joysticks go to a single moulded plug, long leads provided.

Single Player version **£9.75**

Two Players version **£15.00**

SOUND EFFECT (ENVELOPE) ROM

Now for the sound fanatic or those of you who want to drive the pet crazy, Watford Electronics offers you this unique piece of firmware called the Envelope ROM. It contains a wide range of sound effects, in fact enough to ZAP, BANG, SQUEAK and EXPLODE your way through a whole galaxy of games. Some of the more unusual effects include ZIT, TRIMPHONE, SNAPPER, TARDIS, and a whole host of explosions, gun fire, winning and losing sounds and many other effects to aid the progress of a game. A choice of over 65 sounds.

The sounds are accessed via single star commands, the pitch and duration of any of the sounds can be altered from their default value at any time by adding extra parameters.

A must for all the games designers. Supplied complete with instructions.

ONLY £18

Prices subject to change without notice and available on request.

Improving our

database

search facilities

LAST month I described how a simple database could be programmed and then extended. This month I'm going to improve the way it prints out the information by adding some simple search facilities.

The first simple change to be made enables you to have any title for the database. As the final version stood last month, the title 'Address Book' always came up when scrolling through the data. To replace this with your choice of name, first input your title at a suitable point in the program.

This has been done in the procedure PROCcenterfields at line 1415 of listing 1 (as it's only one line, the program has not been renumbered). The title name is stored in the string variable title\$, then lines 910 and 980 are changed to include this. A minor complication now is that we cannot say how long the title will be, so the program must determine this in order to centre it on the screen. This simple routine works well, but problems will occur if the title is longer than 40 characters – a test for this could be made when the title is entered.

Simple, you may say, and a nice touch, but how does the program remember the title when a new database is loaded in? The answer is it doesn't – this title needs to be saved and loaded in too. Lines 640 and 800 are convenient places in the save and load routines respectively. Just load and save the string variable title\$ as well as F%.

Unfortunately this is where some trouble starts, because after changing the database to version 6 as detailed

Improving the search facilities on your database, compiling a procedure library and Kenneth Kendall's cold are among Martin Phillips' topics

above, and attempting to load in a previous database, an error will result (Type mismatch at line 680), as we have changed the structure of the data file to be loaded in, but not that of the data stored on disc or cassette. 'Oh no,' I can hear you saying. 'Do I have to type in all the data yet again?' Fortunately there's a dodge we can use to alter the data stored on disc or cassette without having to re-write it all. It's rather crude but can save quite a lot of hard work, and can often be useful for debugging programs.

Once the 'Type mismatch' error has occurred, type:

```
CLOSE #0
```

to close any open files. This is necessary as the one being read will still be open because the program stopped before the file was able to be closed. To show this, run the program again, and a 'File open at line 630' error message will appear this time. Pressing Break will close all the files, but don't do this, as it will also clear all the stored data which we are going to resave.

After closing the file, enter the title of the file as a direct statement, eg:

```
title$ = "Address book"
```

Next type the direct statement:

```
GOTO 750
```

and press Return. This will start the program off again, but inside the procedure PROCsave. It will then allow the file to be saved, with its title. It's wise to give the new data file a different filename, although the same one can be used. When the program has saved the data, it will give an error message and stop at the end of the procedure (No PROC at line 860). This doesn't matter as the program can simply be re-run, and the new data file should load in without error.

I'll tell you how this technique works. When a program stops because an

error has occurred (or if Escape is pressed) none of the variables are cleared. Then when the program is sent to the save procedure, it is able to find and save all the data required. The one variable it did not know, title\$, was entered directly. The program will not continue to run correctly because we went into the middle of a procedure. By choosing a different entry point it's possible to keep the program running. GOTO 80 will do this but then it will be necessary to go through the menu to reach the save routine.

Often it's useful to be able to check the value of variables when a program fails to run correctly. When a program stops after an error, the values of any variables can be found by using PRINT followed by the variable. I find this especially useful when I get the dreaded 'No such variable' error. Printing out all the variables on the given line one-by-one soon produces the offender.

Next the program needs to be improved to include a search routine, and I've added a printer output facility. In listing 2, line 140 has been altered and the procedure PROClook re-written to present a menu of options. It also displays whether the printer option is on or off. A new procedure, PROCsearch, has been included to provide the printer facility and a search option. First the title and field names are displayed on the screen, then the user is invited to select the field under which the search is to be carried out. The string to be searched for is entered and the procedure will print out those records where a match is found. If no string is entered, but the Return key is pressed, all the records will be displayed.

The search routine is accomplished by using the useful INSTR statement. There is a well-documented bug in Basic 1 in the INSTR statement which will corrupt the program, and occurs if the string being searched is shorter than the search string. Line 1620 has been inserted to test for this. It's not necessary for Electron users, or if you have Basic 2 fitted, but it does no harm to leave it in.

Having got to this stage, the program

IF YOU have a technical hitch or a programming problem let Martin Phillips give his diagnosis. We'll pay £5 if you raise a really interesting point. Please give full details of the system you're using and include a listing where appropriate, making your question as specific as possible. memo-calc

107 MEMO-CALC £12.95 B C/D
"IT MUST BE AMONG THE LEAST EXPENSIVE PIECES OF USEFUL SOFTWARE YOU WILL EVER BUY" Revue by Practical Computing July 1983

Database/calcsheet program which allows up to 255 columns. The number of rows is automatically set from 5 to over 1000 depending on the columns declared. Both numeric and alphanumeric data can be stored in any cell and can be of any length up to 255 characters.

There are a multitude of uses for this program from accounts to diaries, club or personnel records etc. and is probably the one program that we all need. MODE7

107a Manual for MEMO-CALC included free otherwise £2.00 (0% VAT)

PAYROLL

Part 1 is a BASIC program running in MODE7 which accepts new data on employees, allows additions, deletions and alterations, listing of P35 & automatic alterations to the codes as required by tax notice P7X. Fully 'user friendly' with colour and graphics to make life simple for the operator.

Part 2 (WEEKLY) or Part 3 (MONTHLY) is designed to handle the calculations of wages and N.I. It allows for standard pay, two overtime rates, optional pension funds (monthly only) other pay, holiday pay, bonuses, post-tax adjustments and no pay.

CASHBOOK

102 CASHBOOK £11.95 B C/D

FIRST CHOICE This is a double entry cashbook program showing cash and bank credits and debits i.e. 4 columns. Any number of individual accounts can be used and analysed or totalled individually or cumulatively by associated group. A friendly but very practical, and reliable program which despite its low cost is used by many people in a range of situations from domestic and clubs to schools and businesses. MODE7

102d CASHBOOKd £19.95 B D

SECOND CHOICE This version of the above program uses random access disc files and can hold up to 1250 entries on 100K discs and up to 2500 on 200K discs. There is sophisticated protection against unauthorised use built in. MODE7

102f ACCOUNT £29.95 B D

THIRD CHOICE This version of the above program uses random access disc files and can hold up to 1100 entries on 100K discs, and up to 2250 on 200K discs. Included is a choice of CASH/BANK or VAT/BANK headings. Over 830000 possible accounts combinations. Ledger sheets and summaries can be printed as well as full accounts. The latest balance is available at any time. This program is only available on disc. MODE7

is still not perfect. There are many possible screen display improvements, and little error-trapping, especially for disc users, which could result in data being lost. The search routine could also be altered to search for more than one string at once.

I hope this has given you an insight into how you can build up a database (or other program) from simple ideas to a complete program. This has been made very much easier by the ability to use procedures, and most of the program development has been through the inclusion of new procedures to perform specific functions.

Econet NFS chip

memory loss

WHERE programs are very long and will not fit into the normal memory space allocated by the BBC micro, it's possible to use extra memory set aside by the computer for purposes not required by the program. This can be a useful way of obtaining extra memory, but there are pitfalls for the unwary: one problem that I've come across twice in the last month is associated with the Econet network filing system (NFS) chip.

This problem was highlighted in Beeb Forum in March 1984 and affects programs which use page &D00. Even when the Econet NFS chip is disabled, it still maintains a vector in page &D00, and this will corrupt any program or data stored at that location. It appears this vector is accessed every time the Return key is pressed, so programs are easily corrupted. The cure is to include the following line at the start of a program which uses page &D00 to effectively disable this Econet vector:

```
?&224 = &A6
```

Typing in the above line before the program is run will show whether the Econet is at fault.

This Econet NFS chip has been fitted, together with the Econet interface components, to all Beebs supplied to primary schools under the Dol half-price scheme. If you're not using the Econet, the best answer is to remove this chip and then the computer will behave as a normal BBC micro with disc interface.

To find the chip, switch off the machine and remove the top cover and the keyboard: the chip will be in its socket, situated in the bottom right-hand corner of the main circuit board, and can be identified by its round green sticker. If you remove the chip, replace the case and switch on, the screen should simply show:

BBC Computer 32K Acorn DFS

and the Econet station message will not appear. If you remove the wrong chip it can be replaced carefully and the correct one taken out. You should store it by pressing the pins into a piece of polystyrene covered in aluminium foil, or by sticking the pins back into the black foam supplied with new ROM software such as *Wordwise*, to prevent damage from static electricity. If the Econet is required at a later date, the chip can be replaced.

If in doubt about removing the NFS chip, take the computer to a dealer and let him remove it.

The Econet interface cannot be removed with the latest BBC micros as the Econet chip and the disc filing system (DFS) chip are supplied as one ROM, and removing the Econet will also remove the DFS.

Squeezing out

the spaces

A PROBLEM that puzzles many beginners programming the BBC micro or Electron is why the computer prints out numbers with long gaps before them. Listing 3 illustrates the difficulty, where a times table is printed out across the screen with wide spacing. There is a way to change how numbers are spaced out on the screen, by altering the print format controlled by the integer variable `@%`. This fact is hidden in the depths of the BBC User Guide, but somewhat easier to find in that of the Electron.

In its simplest, and most useful form, `@%` can be set to give the total of spaces that will be reserved on the screen for a number. The number is printed at the right-hand end of the spaces. It's normally set to 10, so a two figure number will have eight leading spaces or blanks before it. The largest number required in the tables program will be 100 (10 times 10), so `@%` can be set to be three characters wide. This is called the field width. Add the following line 5 to listing 3:

```
5 @% = 3
```

Now the program should be displayed in a more acceptable format. The field width can take a value between 0 and 255.

However, as with many aspects of BBC Basic, this `@%` variable has a more complex form. In hexadecimal the number is made up of four parameters:

```
@% = &(B4) (B3) (B2) (B1)
```

B1 is the character field width.

B2 is the number of digits printed in any of the formats available. It must have a value from 0 to 9 (or 0 to 10, see later). If the actual number is larger than specified by B2, then it will be rounded off.

B3 selects one of the following three types of format for printing out the number: B3=0 is called the general format and the one normally used. Integers will be printed as integers. Numbers in the range 0.1 to 1 will be printed as 0.1 etc, but those less than 0.1 will be printed in exponential format. B3=1 will put the print format into scientific notation where all numbers are printed as exponents, eg, 1000 will become 1E3 and 1200 will become 1.2E3. B3=2 is the fixed format where numbers will be printed with a set number of decimal places.

B4 determines whether a number converted by the `STR$` function will be formatted by the above rules. If B4=1 then strings will be formatted paying attention to the setting of `@%`. Its normal

1 x	9 =	9
2 x	9 =	18
3 x	9 =	27
4 x	9 =	36
5 x	9 =	45
6 x	9 =	54
7 x	9 =	63
8 x	9 =	72
9 x	9 =	81
10 x	9 =	90

Nine times table produced by listing 3—note the wide spacing.

value is 0. If B1=10 (0A in hexadecimal), B2=3, B3=2 and B4=1, `@%` would take the value of `@% = &0102030A`.

If you find all this too much to grasp at once, use `@%` in its simplest form to control the character field width until you become familiar with the idea. Remember, however, that `@%` is one of the resident integer variables and will keep its value from one program to the next if you leave the computer on and no 'hard' Break is performed. This can give the most odd results if a new program is run and `@%` is not changed!

When Basic 2 was released, the number of digits printed out after the decimal point was increased from nine to 10, causing another complication.

Also the default value for `@%` was changed from `&A0A` to `&90A` to give the same display as Basic 1. So to reset the print format, `@%` should be set to `&90A`. Setting `@%` to `&A0A` will give an extra decimal place with Basic 2.

STARdataBASE . . .

The database

for the BBC

GCC (Cambridge) Limited
66 High Street, Sawston, Cambridge CB2 4BG
Telephone: Cambridge (0223) 835330/834641
Telex: 81594 SAWCOM

STARdataBASE is the fast, machine-code, true random access, database program in 16K ROM for the BBC Microcomputer, complete with over 75K of FREE extension Software.

FEATURES:

- * Up to 4096 records in a file.
- * Up to 69 fields in a record.
- * Up to 255 characters in a field (subject to an overall maximum of 920 characters in a record).
- * An entirely User-defined record layout, including a facility for colour.
- * Can be used with 40 and 80 track Disk Drives.
- * Entirely Menu-driven, extremely User-friendly.
- * Extremely fast search – A single record can typically be found in 1 second using the Keysearch facility.
- * Search conditions include the following: =, <>, <, >, and "Anywhere in the field".
- * Powerful facilities to edit records.
- * Mail-merging between documents created on Wordwise or View, and STARdataBASE records.
- * Print-out of the whole database or selected Subsets, in the form of Record cards.
- * Address label printing – (up to 8 across the page).
- * Fully documented routines which can be included in user-written programs and interfaced with STARdataBASE.

STARdataBASE £86.25 inc VAT

RAMROM 15

The Sideways RAM & ROM Expansion Board for the BBC

The GCC/RAMROM 15 board adds to the BBC Micro another eleven sideways ROM sockets plus the necessary hardware for sideways RAM.

FEATURES

- * Fully buffered board.
- * Rechargeable battery backup for RAMS provided as standard. Recharging circuitry is included.
- * The board can be powered by an external 5 Volt power supply, available as an optional extra.
- * The unit comes in a case of its own and resides outside the BBC Micro, giving easy access to the resident ROMS.
- * For those involved in development work, most of the 6502 processor signals are made available outside the BBC Micro.
- * Priority or selection can be assigned to either RAMS or ROMS.
- * ROMS can be used in RAM positions simply by changing two push-on links.
- * Simple installation – NO soldering.
- * Can be installed together with most other BBC add-on boards.
- * ZIF-sockets available as optional extras. Up to 15 may be housed on the RAMROM 15 at any one time.
- * All socket positions are software selectable.
- * Free Utilities Disk supplied.
- * Comprehensive User Manual included.

RAMROM 15 £129.95 inc VAT (P&P £3.50 inc VAT)
EXTERNAL PSU £5.75 inc VAT (P&P £1.73 inc VAT)
ZIFSOCKETS £9.00 inc VAT Free P&P with RAMROM

Trade and local authority enquiries welcome.
Prices correct at time of going to press.

13/20 for

software

OUT of 20 educational software programs I've received in the last month, two discs were blank, four crashed while loading and the only cassette had a fault at block 7. Is this a record? Were the crashed discs the fault of my old non-standard equipment, you might ask? I rang up their publisher complaining that they would not run on three different new standard BBC systems, to be told that instead of using standard model B computers I needed a model B with Econet, 'because all the primary school computers have this fitted'. I'm learning all the time! Needless to say this software has been returned and a refund requested.

Does the Beeb

transmit

synthetic colds?

FOR those readers who have BBC computers with the Acorn speech synthesiser fitted, did you know that when Kenneth Kendall recorded the speech he had a cold? Type in the following line:

```
REPEAT:SOUND - 1,GET,0,0:
UNTIL 0
```

and then press the CTRL key together

ACORN COMPUTER

Speech System USER GUIDE

with the F key (CTRL-F) to hear him cough. He does a pretty realistic

sneeze if you press CTRL-B followed quickly by CTRL-J. I don't know, though, why Acorn decided to include the word Pierrot, which can be heard by pressing CTRL-D. When you get fed up with these try CTRL-C.

Setting up a

procedure library

MANY readers have expressed interest in building up a procedure library (and Joe Telford has presented many over the years in his Jottings). Denise Downs and a colleague, Tim Scratcherd, have collected a library of structured, robust procedures for educational software to use at Huddersfield Polytechnic, and these are now being adapted for transmission on BBC teletext. I look forward to downloading them and thank Denise for the advance notice.

Procedures can be put in any order at the end of a program. Therefore, tried and tested procedures can be saved in personal libraries, called up and loaded in.

It's possible to load several into a program, and there are three ways this can be done. The first is to load in the procedure before writing the rest of the program, but only if just one pre-prepared procedure is to be included. If your program development progresses along random lines, you may not be aware that it will be required until the program is half-complete, so this method would be no use.

The next method is described in the BBC *User Guide*, and is also none too elegant. When the program you are developing is ready for the inclusion of the procedure type:

```
PRINT "TOP-2
```

and call the resultant number XXXX. Then enter:

```
*LOAD "PROC" XXXX
```

to load in the procedure called PROC. Then type END and press Return to get the computer to sort out its internal pointers. Lastly, renumber the program.

The third method is the one I always use and recommend. It can be used with both tape or disc, and requires a little planning and preparation. It uses the *SPOOL and *EXEC commands. The procedure must first be typed into the computer and renumbered. I always start at 10000, as this method could overwrite existing program lines if low line numbers were used, and I have not yet written a program that long!

Once the procedure has been renumbered, save it by typing *SPOOL PROC, where PROC is your filename. Then type LIST and press Return. The procedure will now list and be saved to tape or disc line-by-line. Once it has finished, type *SPOOL and press Return to close the spool file.

When the procedure is required, simply type *EXEC PROC and press Return, and the spooled file will load in line-by-line. Ignore any error messages as these are normal. The procedure will have appended itself to the end of your program, which you must renumber. It is now possible to spool another procedure into the program. This method speeds up the writing of a program by using pre-prepared building blocks.

Quickfire

questions

WHEN listing programs that don't have a space after the line number, first type LISTO 1 and press Return. This inserts a space after the line number when the program is listed, and can be cancelled with LISTO 0.

REMEMBER it's not necessary to list all of a program:

LIST 100	lists just line 100
LIST 100,200	lists lines 100 to 200 only
LIST ,100	lists up to line 100
LIST 100,	lists all lines after line 100

If working on a section of a program, you can program a function key to list part of it:

```
*KEY0 LIST 100,200 | M
```

When function key 0 is pressed it will list lines 100 to 200.

POS will return the horizontal position of the text cursor on the screen. This is useful, say, for detecting whether there is room to print another word on the same line or whether you need to start another. VPOS will return the vertical position of the text cursor.

TO move text a specific number of spaces across the screen, TAB followed by a single argument will print that many spaces.

You'll find Hints and Tips listings 1 to 3 are on yellow pages 97 to 99.

NEW RELEASES

PORTCOM

This powerful port control module connects to the user port of your BBC Micro and can form the basis of a computer control system for use in the home or in schools.

- User port still available.
- 2 Mains outputs, rated at 2.5A, 825W, optically isolated and zero voltage switched.
- 4 Relays to switch DC loads, rated at 3A, 28V DC, SPCO.
- 2 DC outputs can be used for rapid switching, rated at 5A, 50V, 50W max.
- 2 x 8 LED displays to monitor the user port and output devices.
- Mains powered, regulated 5 and 12V supplies available to the user.
- Many input and output modules available. Further modules soon to be released.
- Demonstration software including a teaching program supplied on cassette or disc. All connecting leads and user manual supplied.

PortCom in rigid plastic case £126.50

PortCom in metal case £143.75

REAL TIME CLOCK

This product can form the basis of calendar type programs, desk diaries etc. Useful in control situations. The clock has its own battery back up and never forgets the time. Connects to the user port. Supplied with user manual and software demonstrating its use.

Real time clock £36.80

BBC - ZX PRINTER INTERFACE

Still available, this popular product allows a ZX Printer to be used by the BBC Micro for listings, program development etc. Complete with user manual and fully relocatable machine code printer driver software.

BBC - ZX Printer Interface £29.95

SPEECH SYNTHESIS

An almost infinite vocabulary can be produced by simple software. The unit contains its own amplifier, loudspeaker and volume control. Connects to the user port. Supplied with user manual and demonstration software.

Speech synthesis £36.80

1MHz BUS TO USER PORT ADAPTOR

Not enough user ports? Then you need this adaptor. Generates 2 more user ports from the 1MHz bus. Jumper links inside the unit allow the user to select the address of the ports. Mains powered. Complete with user manual.

1MHz bus to user port adaptor £51.75

1MHz bus buffer unit £28.75

1MHz bus decoding unit £32.20

User port monitor £27.95

Prices include VAT, Postage and packing.
All products guaranteed.

TAKE COMMAND OF YOUR KEYBOARD

Get to grips with the skill of inputting information into programs through the keyboard, with Tessie Revivis

PROGRAMS — as a computer owner they dominate your life! Sitting down to write one can present many problems and one of these is how to interact with your computer. Whether you want to write a game or a database, all programs need some information from the keyboard to work on. A game requires sequences of key presses to operate it, whereas a home database, such as the one presented by Martin Phillips in last and this month's Hints and Tips, needs continually updating, so getting information into the program is vital. So how do we go about doing this? Let's investigate!

The most common way is to use the INPUT command, which can read in numbers or strings of characters from the keyboard depending on the type of variable you specify after it. Try the following short program to demonstrate each:

```
10 CLS
20 INPUT "What is your name", A$
30 INPUT "What is your age", A%
40 PRINT "Hello ";A$;" are
you";A%
```

Notice how it's possible to include messages to the user within the INPUT command. Run the program and you'll

notice that a question mark is printed after the message, indicating that your Electron or Beeb is expecting some information from you. Type in your name, then tell the micro you've finished by pressing the Return key. Next you'll be prompted for your age. When you've entered that press the Return key again, and your name and age will be printed out in the form of a sentence.

The information we have entered is now stored within the computer's memory. To prove it try typing PRINT A\$,A%. Although the program uses variables beginning with A the suffix to each is different. The \$ (pronounced

'dollar' or 'string') tells the micro that a series or string of characters is expected, and should be stored as such. The % (pronounced 'per cent') insists that you enter a number and anything else will cause an error.

Occasionally you may not want to have the question mark printed after the message, and this 'prompt' can be turned off by leaving out the comma immediately preceding the variable in lines 20 and 30 of the program. Try it and see.

Programs often require several items to be entered at the same time and this can be catered for using the INPUT command, as the following quickie shows:

```
10 CLS
20 INPUT "Enter three numbers",
  A%,B%,C%
30 PRINT "Your numbers were",
  A%,B%,C%
```

Line 20 does the donkey work by specifying three variables into which the numbers can be entered.

The really good thing about strings and variables is that they can be tested and, if you don't like the result, rejected! Suppose we were using the database program and wanted it to receive from the keyboard the name of the section it should move onto. The sections or headings might be called NAME, ADDRESS, and PHONE; the following loop will only proceed when you have correctly typed in the relevant section.

```
10 CLS
20 PRINT "What section do you
  require?"
30 PRINT "NAME, ADDRESS or
  PHONE?"
40 REPEAT
50 INPUT A$
60 UNTIL A$ = "NAME" OR A$ =
  "ADDRESS" OR A$ = "PHONE"
70 PRINT "Section recognised!"
```

Line 60 treats each string as if it were a number, using the equals sign to test each possibility against the string you typed in.

We can shorten line 60 quite a bit to quicken things up. As each section starts with different letters, ie N, A and P, the command GET\$ can be used. This acts a little bit like INPUT except it just waits for you to hit a key and then thunders on its way. Retype lines 50 and 60 of the above program as follows:

```
50 A$ = GET$
60 UNTIL A$ = "N" OR A$ = "A" OR
  A$ = "P"
```

Typing the first letter of any section will cause the program to move on, and there's no need to press that awful Return key!

A similar command (GET) exists that deals with the numbers relating to the key pressed. For example, the number, or ASCII code, for the letter A is 65, and this could be tested for using:

```
10 CLS
20 REPEAT
30 A% = GET
40 UNTIL A% = 65
```

A full table of the ASCII codes relating to each key on the keyboard can be found in your User Guide, so have a look.

The problem which often arises with all types of input commands is that they quite often fail because your micro might not be in the character case you require, eg, you might be testing for the A key but if the 'Caps Lock' light is off the computer is seeing a lower case 'a'. Being able to get round this problem is useful to say the least, and the most obvious solution is to test for upper and lower cases:

```
60 UNTIL A$ = "NAME" OR A$ =
  "name"
```

and so on. This is long winded though, and doesn't test for mixtures of upper and lower case characters.

Another way is to 'force' lower case to upper case. The term force means what it implies - if it is lower case then make it upper case! Enter the following program to see just what I mean:

```
10 CLS
20 REPEAT
30 A$ = GET$
40 UNTIL A$ > "@"
50 X% = ASC(A$)
60 X% = X% AND &DF
70 PRINT X%
80 PRINT CHR$(X%)
```

After typing RUN, press the caps lock key to get into the lower case character set. Now press the 'A' key. The value 65, and the character itself, has been changed to upper case. The program

waits for you to press a letter key that is 'greater than' an @ key (line 40). The key which is stored as a string in A\$ is then converted into an ASCII code, using the ASC command, which is placed in the variable X%. The lower to upper case conversion is then performed in line 60. This involves using a logical operator, AND, to play around with the ASCII code of the letter (using the &DF) to ensure it's in upper case.

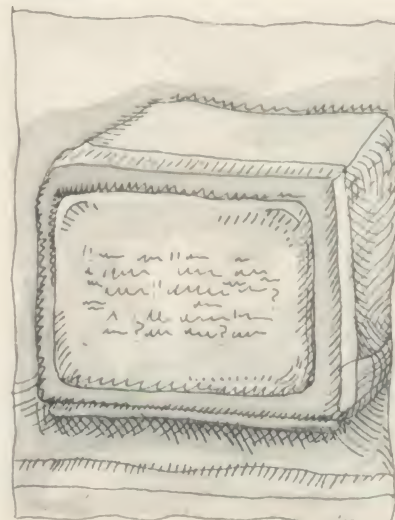

Another useful command to test for either case characters, and then act on the information directly, is INSTR (pronounced 'instring') used in conjunction with GET\$. Here's a typical application:

```
10 CLS
20 P. "Do you wish to continue Y/N";
30 ON INSTR("YNyn",GET$) GOTO
  50,60,50,60 ELSE GOTO 30
40 :
50 PRINT "Yes":END
60 PRINT "No":END
```

The INSTR command looks for the occurrence of one string within another. Here the search string is in the command GET\$, so the command waits, looking at the keyboard. When a key is pressed it looks for this in the source string, which in this instance is "YNyn". If it is located it gives its position a number; "Y" would be 1, "N" would be 2, and so on, as we are using the ON...GOTO sequence. This number is then related to the position of the line numbers after the GOTO command. Thus ON finding the letter it can GOTO the corresponding line number. If the letter is not located in the string then the ELSE is performed.

This technique is extremely useful for setting up menu screens as it accepts only the correct letters and then determines the next part of the program to be accessed.

Next time we'll examine how we can actually play around with characters in a string using LEFT\$, RIGHT\$ and MID\$ commands.

MONITOR THE REDUCTION ON OUR HIGH RESOLUTION.

**48 HOUR
DELIVERY**

We've reduced the price of our RGB high resolution colour monitor (580 x 470 pixels) to only £199.95 – that means you save £50 on our previous offer – and that includes VAT, leads and carriage.

And just because you're saving on price doesn't mean you're sacrificing quality. Here's what Acorn User had to say about our monitors.

"..Gave steadier pictures than the Microvitec Club, and the colours were rather better.

It seems that all 'normal' and 'medium' resolution monitors, including the Sanyo, are simply inadequate to deal with the Beeb's graphics and text output.

The JVC was excellent, giving clear, legible results.

Was the JVC better than the Microvitec?*
Would I buy one? Yes to both questions.*

MODEL REFERENCE	1302 2 High Resolution
RESOLUTION	580x470 Pixels
C.R.T.	14"
SUPPLY	220/240v. 50/60Hz.
E.H.T.	Minimum 19.5kv Maximum 22.5kv
VIDEO BAND WIDTH	10MHz.
DISPLAY	80 characters by 25 lines
SLOT PITCH	0.41mm
INPUT: VIDEO	R.G.B. Analogue/TTL Input
SYNC	Separate Sync on R.G.B. Positive or Negative
EXTERNAL CONTROLS	On/off switch and brightness control

The unit has a 14" screen and is suitable for the BBC Micro, Electron, Sinclair QL, Lynx, Oric, Apple, IBM, Amstrad and RML 480Z and most other leading micros.

And there's a year full guarantee.

If you order your monitor by post, you'll receive it within 48 hours by courier service.

Simply post the coupon below to: Opus Supplies Ltd., 158 Camberwell Road, London SE5 0EE. Or by telephoning 01-701 8668 quoting your credit card number. Or, of course, you can buy at our showroom between 9.00–5.30 pm, Monday–Friday.

Databases disturb a hornet's nest

Sir, As a completely non-technical user of home computers, dependent on commercial software, I was interested in your review of the six database packages, particularly *Masterfile* which I have recently tested. I cannot say that I have given it a thorough workout but I am surprised your reviewer did not comment upon two silly weaknesses.

It relates to its handling of numeric fields where I think more could have been done to help the user, as follows:

All least significant zeros after the decimal point, even if keyed, are dropped during printout, causing a very ragged and hard to follow presentation. If nothing else, at least decimal points should be vertically aligned.

For reasons best known to the programmer, *Masterfile* deducts, apparently randomly, 0.0001 (or similar, depending on field length) from specifically keyed data. There is a comment on page 12 of the booklet about minor binary differences but this is referring to certain in-built calculations. If the data keyed by the user is not safe in the hands of the program, I would have thought that is putting the machine before the user and a serious deficiency.

If it is a technical thing we users have to put up with, why was it not explained?

In the meantime, I look forward to more reviews of non-games software.

G A Upton
Merseyside

Sir, I eagerly awaited the comparative review of databases but was very disappointed when it appeared. It was far too short to be really useful – a page on each would have been more realistic – and omitted Acorn's own offering as well as Computerwise's *Data Minder* which, from its specification, must be one of the most interesting, as it allows simultaneous access to multiple files.

Only a complete novice would have learnt much from your review. The more experienced are equally in need of information as they are no more able to buy and try everything on the market. As the magazine for BBC users, please try to be more definitive in your reviews. If *Elite* rated a

whole page in the October issue, then surely the fundamental packages – spreadsheets, wordprocessors and databases – rate at least one page each.

A S Blench
Bucks

Sir, Further to my letter (*Acorn User* October 1984) may I say that I have appreciated the comparative reviews of the Turtle family and the databases; particularly as the reviewer of the latter, Vincent Fojut, confirmed my faith in *Beta-Base* as an easy to use, and good value for money database.

Having said that, would you not consider there to be a responsibility on the part of the reviewer to be accurate, particularly when comparing a number of similar products. My own experience of *Beta-Base* indicates that there is not one single search field, but a maximum of five, more than one of which can be carried out on the same field, for example using < and > relational operators to search for dates of birth between specified dates. One has to acknowledge that the sort facility is restricted to 500, but of course there is no limit, to my knowledge, of the number of records that can be searched.

I am sure that your reviewer must have had the earlier version of *Beta-Base*, as the enhanced version certainly has the facility to spool files into a wordprocessor, and has added the facility of global entry or edit.

Keep up the high standard you have set yourselves: you present a magazine of quality.

David Powell
South Yorks

Sir, Your readers may like to know that *Profile* from Haiku-soft has been considerably updated and is now published under the name *Psifile* by Sigma Press. 'Wild-card' searches and improved print-out facilities especially suited to mailing lists are among the additions. It is available either on disc at £19.95 (BBC model B) or cassette at £9.95 (model B or Electron).

Graham Beech
Sigma Press

Vincent Fojut replies: I regret the confusion over *Beta-*

Base's search facility. Although the text gives the wrong impression that searches are limited to a single field, table 2 (p.155) correctly shows that up to five fields may be used. Also, by specifying the same field more than once in a search, the 'AND' function may be simulated (but not 'OR').

My article does clearly state that, although *Beta-Base's* search and sort lists are limited to a maximum of 500 records, the number of records on a file could be higher. So, if more than 500 records in a large file satisfied a given search condition, the search would finish prematurely. Readers would have to decide for themselves whether this is important in their application.

To quote from my review, it was 'not intended as an exhaustive comparative review, but outlines the typical features you are likely to come across, with an indication of how they compare.' Those who feel that the piece was too short, or ignored certain packages, have missed the point. Although it was self-contained, consider the article also as the 'groundwork' for any further 'in-depth' database reviews that may appear in *Acorn User*. I hope my article helps to put in perspective the concepts and facilities covered in any such future reviews, as well as helping those who are already considering a purchase.

Since writing the review, both Beebugsoft and Clares have announced enhanced versions of *Masterfile* and *Beta-Base* respectively. Both packages boast several new facilities, many of which correct shortcomings outlined in the review: eg, *Masterfile's* sort speed is now much improved; *Beta-Base* now allows SPOOLED output, etc. Prices remain unchanged in both cases. Clares offer to upgrade discs if returned with a cheque for £3. Cardiff Micro Software have slashed the price of their *Datafile* package from £49.50 to £24.15. This brings it much more in line with other disc-based products, and obviously qualifies some of the observations in the review.

ASK a silly question, pass a fair comment, stage an angry protest – we don't mind what you write to us about (or about us!). Keep 'em short, keep 'em sweet, but keep 'em coming! The address is: Letters, Acorn User, Redwood Publishing, 68 Long Acre, London WC2E 9JH.

Hospital says

thanks AU

Sir, Recently you published a letter in which I requested help from your readers in developing software for handicapped children. May I now thank your readers for their most generous and enthusiastic response. We have had so many letters that I have not been able to reply individually to each one, but will be contacting some readers very shortly with detailed specifications for new ideas.

It's nice to know that there is so much enthusiasm to develop new applications for computers, and the generosity of your readers in offering to give their services free of charge was very refreshing.

Dr David Hall
St George's Hospital
London

Compendiums

could cut costs

Sir, I am amazed that none of the larger software companies have yet produced any 'games packs' on 40 or 80 track discs.

Surely the likes of Acornsoft could put six or seven games on one disc, keeping the price to a minimum and providing a good service to people who don't have any software on disc.

I am positive this could be a great success especially if there was a price incentive; say a disc of eight for the price of four or six individual games.

Maybe someone will jump on the proverbial band-wagon and take a lead in this field.

Seconds out

for View

versus Wordwise

Sir, Your article on wordprocessors in the January issue of *Acorn User* contains some very good advice for prospective buyers but suffers from inaccuracies and the inclination of the author to favour *Wordwise* because that is what she is used to. Some of the good features mentioned for *Wordwise* apply equally to *View* (flexible, fast text movement; file merging; producing simple documents quickly; printer control) while criticisms of *View* apply equally to *Wordwise* (numerical information on rulers, overwriting existing files).

Taking the various points raised about Acornsoft individually:

The various comments about printer drivers are completely inappropriate given that all our advertising states the position on printers very clearly and this information is repeated on the back of the *View* pack. There is no difference in the printer driver interface between versions 1.4 and 2.1, which both accept extended sequences.

We have not put numerical information on the rulers or cursor because the *View* philosophy is not to clutter up the screen with largely irrelevant information or irritating, forever changing numbers. The user is given as much room for text as possible without the distraction of *View* fiddling around all over the screen.

The problem of not overwriting an existing file is really a filing system rather than an application problem, which is partly why many other applications as well as *View* do not resolve it. Most users find that the ease of saving an already correctly named file by just typing *SAVE* is preferable to instructing the computer twice to do a simple operation. With *View* you can also see the catalogue on the screen as you are saving the text, which helps reduce error.

LS2 produces triple spacing because the 2 is the number of blank lines inserted between text lines.

The method of text recovery after hitting *Break* (an exceptional move) is not deeply

buried. You simply type *OLD*.

Finally, Acornsoft are committed to supporting and developing the whole *View* range. We are investing ever-increasing resources to the development of new *View* products and to improving existing ones.

Robert Macmillan
Business Group Leader
Acornsoft

Jaquetta Megarry replies: It's untrue that I favoured *Wordwise* because I was most familiar with it. I spent much time getting to know *View*, but it's a case of horses for courses, and *Wordwise* suits my needs best.

The points raised about good features of *Wordwise* also applying to *View* and criticisms of *View* being relevant to *Wordwise* are correct, but my review explicitly stated this was the case in the tables.

I think it was valid to comment on the printer drivers as it affects cost comparison, and I didn't imply that Acornsoft mislead buyers about the position.

According to the review copy I received, the point about versions 1.4 and 2.1 is untrue, but the documentation with my package was incomplete.

Regarding *View* not printing numerical information on rulers or cursor, this could be made available on request

only, like line numbers in *Wordwise Plus*.

I don't agree that most users find it easier to save a correctly named file by typing *SAVE*, and, although you can see the catalogue on screen as you are saving text, I would still like to have a safety-net.

The details of how to recover text after hitting *Break* are vital to beginners so why not include it in *Into View*?

Tell us about

the 6502

Sir, Software and firmware reviewers please take note. Now that the 6502 second processor is becoming more in demand please indicate if software under review, whether in disc, tape or ROM format, is compatible with it. It would be most disappointing and annoying to find that the expensive software/firmware you have purchased bombs out when in the second processor.

Program writers contributing to *Acorn User* could also indicate any listing modifications required to enable it to run in the second processor, if possible, as is generally done now for Basic 1 and 2.

Advertisers too should realise it would be a major

selling feature if they could state that their programs are 6502 second processor compatible.

Atomic

wasteland

Sir, I picked up January's copy of *Acorn User* from my newsagents expecting to find *Atom Forum* in its usual place, but no matter how hard I searched, I could not find it anywhere. I was amazed to discover in 207 pages of your magazine, the only mention the *Atom* received was in the Free Ads at the back. The front of the magazine states that the information inside is for the 'BBC micro, Electron, Atom'.

Isn't this a bit misleading to *Atom* owners who, after having gone out and spent £1.20 on *Acorn User*, find that there is nothing for their computer.

I hope that you sort this matter out soon, or you should have quite a few angry *Atom* owners writing to you.

D W Hewitt
Shropshire

Stopwatch on second processors

Sir, I read Paul Beverley's article on speeding programs up (*AU*, December 1984) with some interest. I have just taken delivery of an Acorn Z80 second processor, and decided to run the benchmark tests referred to for myself. My results for the three versions of Basic are shown in the table. The Benchmark 8 test which I ran seems to differ from the one used by Paul Beverley, but the results still provide a useful comparison. The BBC micro timed itself for the first two sets of benchmarks, while the third set, using Professional Basic, was timed with a stopwatch and therefore probably errs on the slow side.

I then tried the test to detect

phantom interrupts, and was appalled to discover that my Beeb-plus-Z80 combination returned a result of 191.44, whilst the Beeb clocked just 88.05 with the Z80 switched off! Perhaps one of your resident experts could enlighten me as to the reason for these results.

Professional Basic (PBasic) provided with the Z80 is a run-only version. This means that programs cannot be written directly and then run, as in BBC Basic. In fact, direct mode in PBasic appears to accept only one command, *SYSTEM*, which returns the user to CP/M. The manuals suggest using *MemoPlan*, the word-processor provided with the Z80 pack, to write source programs in PBasic. However, I

have found that it is possible to write programs under BBC Basic, using the *AUTO* line-numbering command, and ensuring that only keywords permitted in PBasic are used. Once the file has been saved, exit to CP/M and *CONVERT* the file from internal format (extension .BBC) to an ASCII file (extension .BAS). The resulting program can then be run under PBasic.

I enjoyed the articles on the Z80 by John Vaux (*AU* July to September 1984) and hope that you will publish further items on the Z80 second processor, CP/M software and languages.

Elite fiddles – the harmless

and the deadly

Sir, In the early stages of *Elite* when you are only equipped with a 'front pulse laser' – if the player gains enough credits to be able to purchase another laser and accidentally selects F (for front) instead of one of the other choices, then the program immediately credits the player with 260.1 CR. You can continue to do this over and over again, increasing the credits held. Obviously this allows a player to develop a vast amount of wealth very early on in the game (in my case 100,000 CR in approximately 20 minutes) and then to equip his/her ship with all possible weaponry, etc. You can then pursue a strategy of attacking everything that you come across – rapidly improving your rating (in my case from 'mostly harmless' to 'dangerous' in a little under four hours).

Mr Thareec
London

Sir, Having overcome a slight problem I had with my disc (original!) copy of *Elite*, which crashed fairly frequently on docking or hyperspace, I thought readers might like to know of a fool-proof solution.

The problem seemed to be caused by reading data off the protected program disc. This can easily be remedied by copying the data files onto a normally formatted disc. Simply type 'COPY 0 0 D.' and 'COPY 0 0 T.' You will not be able to BACKUP the original due to its protection.

If using dual drives your task will be a lot less laborious as there are 18 files to copy! Once completed, however, the main program can be loaded as normal off the original disc, and the one with the copied data files used in its place from then on.

One word of warning! The original problem (ie, the screen filling up with a load of rubbish on docking, etc) seems to recur if you save another file (even a commander) to this disc.

I hope this relieves considerable frustration previously experienced by myself and several others on what is otherwise a truly excellent game.

Commander Wycliffe (Deadly)
Slingsby

Sir, It may be of interest to fellow Beeb owners that Acornsoft have taken the view that all disc drive owners use only the Acorn DFS in their marketing strategy for the excellent game *Elite*.

I, and many others, like to match the excellence of the Beeb with the best that is available in support systems; and have bought a DFS that gave better facilities than the Acorn product – in my case Watford's DFS. Unfortunately, the disc version of *Elite* does not run under Watford DFS – nor, I believe, under Pace.

On phoning Acornsoft, I received only the advice that the game had been written with the Acorn DFS in mind,

not other DFS's. I asked whether it was not felt that some hint of this parochial view would be a good idea in the advertising copy of *Elite*, but this didn't go down at all well!

In my view, Acorn are going to lose out; given a choice of a good game or a good DFS, the latter takes preference. If game sales are to be maximised, all Acornsoft have to do is be a little less clever in their programming routines – we could all then enjoy the game as well as our choice of DFS.

I only hope that this letter serves as a warning to any budding *Elite* owners – your dealer may not be as sympathetic as mine, and £17.65 is a lot to waste!

B G Hulatt
Middx

Sir, All too often, we hear of people griping about software piracy. I would like to put a dif-

ferent perspective on this issue, as I consider myself a victim of software protection!

I recently fitted a Microware double density disc interface to my BBC and must say that I have been completely satisfied with its performance and its ability to access standard Acorn discs.

However, the problem arose when I decided to invest, along with a host of other BBC owners, in the new Acornsoft production, *Elite*. Having paid £17.50, I got home, powered up my BBC and inserted the new disc. After several valiant attempts by my nice shiny new disc drive to wrap its read/write head around the drive spindle, I realised that something was amiss! This was eventually tracked down to the method used by Acornsoft to protect their product – namely by the deft use of some rather obscure 8271 FDC commands (the DFS in my machine uses the 8272).

After much investigation on my part by searching out data on both the 8271 and 8272 FDC's and digging around in the offending Acornsoft code, I eventually had to concede defeat and return the package to my friendly dealer. I must admit that I bought the game under the agreement that if it wouldn't load, I was sure of a complete refund, but I feel it's a poor state of affairs when software houses have to go to this length to avoid piracy of their products.

This episode has resulted in me now being extremely reluctant to purchase commercial discs – all because I decided to go for a nonstandard upgrade. I suppose I could have purchased the game on tape instead, but to then have to transfer it to disc (where I wanted it in the first place) would be regarded under the current copyright laws as a criminal offence.

I rest my case.

David C Morris
Sheffield

John Collins of Acornsoft's Technical Services replies: Our policy is to try to support any DFS the user might have in his machine. If DFS manufacturers keep us supplied with current versions of their products we will do our best to make our software protection compatible. Some manufacturers have been co-operative in this matter and others have not even bothered to answer letters from us.

We only guarantee to sup-

port Acorn DFSs and strongly recommend users not to buy a non-Acorn DFS. The problem with some is that they do not properly emulate OSWORD &7F calls, in which case we can do nothing short of rewriting their DFS for them.

Our protection did work on the Watford single density DFS a few months ago. Mr Hulatt may have another version of the Watford DFS or a Watford double density DFS, neither of which we have seen.

As far as *Elite* is concerned in no circumstances should one attempt to save Commanders back to the program disc as they will render it useless.

In answer to a point other *Elite* addicts have brought up, yes, Watford ROM Manager does make you *Elite* as soon as you take off. However, this will not help anyone win the competition as we can tell the real *Elites* from the rest.

Mr Thareec's correct in saying that in early BBC disc versions of *Elite* one could unfairly build up vast sums of money quite quickly. Again, doing so would not help anyone in the competition as we can tell the difference. If anyone is very unhappy about this they can have their disc replaced by contacting Acornsoft, but they might find it interesting to have one Commander who cheats and another who 'plays the game'.

All sorts

of sorts

Sir, I'd like to comment on George Hill's article 'See how they sort' (*Acorn User*, October 1984), and the improvement proposed by Susan Jones in the Letters pages of the December issue.

In the initial 'unadorned' shell procedure line 530 can be deleted. If you are not sure that the number of items to be sorted is larger than null, add line 505:

```
IF max <= 0 ENDPROC
```

Although I liked Susan Jones' letter very much and agree entirely, I propose to replace line 510 with

```
inc=2^INT((LN(max/2))/LN(2))-1
```

which calculates the initial distance with less instructions.

Michel Moes
Luxembourg

DISC-MINDER

We are experts at producing disc protection. Disc minder facilities include:-

- produce on your own equipment •
- 40/80 bootable • M/C or Basic or both •
- protects against all existing copiers •
- each system individually designed •
- reasonable, once only payment •

Write now for further details.

Other products -

MICRO-PHILE Direct access database, with reporting and statistics facility. **disc £14.95**

TEXPRINT Superb Mode 7 multi-tone screen dump for Epson or Walter printers. **disc £8.95**

S Rawal, London N3

We will be carrying comparative reviews of both ROM boards and single and double density disc interfaces in the near future, as well as a ROM compatibility chart.

It is unlikely that most DDFS would be compatible with the APTL board, due to fitting difficulties.

Ruth Astall, Oxford

We suggest you take your Saisho tape recorder back to the store where you purchased it and ask them to test it on one of their BBC micros. Problems can occur due to bad head alignment and can be cured simply by adjusting the tension spring which controls the

Graham, published by Dorling & Kindersley, 1-2 Henrietta Street, London WC2, and *BBC Basic for Beginners* by David Smith, published by Melbourne House, Youra House, Castle Yard, Richmond, Surrey.

Books are very personal affairs, so I would really suggest you go along to a good computer bookshop and see what's on offer, and more importantly, what suits your own taste.

Simon Hicks, Hitchin

Atom Software is available from Bear Hardware, 68 Harmondsworth Lane, Harmondsworth, Middx UB7 0AA, tel: 01-897 3059.

Due to the large amount of technical enquiries we receive in the *Acorn User* office we are now unable to reply to individual letters. However, this new feature is intended to answer as many of your queries as possible, and should provide a useful information spot. Please keep your letters short and to the point.

'height' of the recorder head. Martin Phillips has covered the subject of loading and saving programs extensively in Hints and Tips, July 1984.

C Mathews, Wolverhampton

Fortran is available on the BBC micro from Acornsoft. It's included in a package called 'The P System' along with UCSD Pascal. It costs £299, is available on disc and requires a 6502 second processor.

C Lock, Bristol

A line was missed out of the 40/80 track solution presented in the August 1983 issue. The missing line is:

610 = X%?T%

A Hilton, Hartley, Kent

The August 1984 issue of *Acorn User* carried an article, 'Downloading the Weather', which contains details on the equipment needed to use a BBC micro to receive satellite transmissions.

John Lloyd, Banbury

There are numerous beginner's books available for the BBC micro. Titles that you might find useful are *Step by Step Programming for the BBC Micro* (books 1 and 2) by Ian

Geoff Smith, Riyadh

We hope to be able to supply a compendium of past magazine listings on cassette soon.

W Shore, Abingdon

The error in the 'Shine A Light' article in the March 1983 issue was that a Schmitt receiver (RS 303 270) should be used and not a pin photodiode as originally printed. The corrections were printed on page 16 of the May 1983 issue.

D Anderson, Chesham

It should be possible to run a Commodore 4023 disc drive on a BBC micro. However, the hardware and software required to facilitate such an interface would be both complicated and expensive. The Commodore drives are also renowned for their slowness of operation. We would advise against such a project and suggest you purchase a more normal BBC compatible drive.

Gary Truman, Cardiff

Harry Sinclair's sprite 'Mover' program contained no bugs. However the listing produced was incorrect in that the pound sign should read hash, ie #. So replace all pound signs with hashes.

Kitty advises

on screen modes

and cassette to

disc transfer

Q I am the proud owner of an Electron and having typed in many program listings from your magazine have noticed that the screen modes can differ from listing to listing. For example, one program might use mode 6, another mode 2, and so on.

This all seems rather confusing – could you possibly give me a layman's explanation as to why there are different modes and tell me which one I should use for my own simple programs?

Tim Rostron

Reading

A The screen mode used in programs tends to reflect what the program is doing. Basically there are two types of screen modes – those used to display text only and those used primarily to display graphics, with perhaps just a small amount of text. If you are interested in graphics then modes 0, 1, 2, 4 and 5 will be useful to you; modes 3 and 6 are for text only.

I'll take the graphics modes first. Whichever mode you choose will need some of your computer's memory – at least 10k in modes 4 and 5 and up to a massive 20k in modes 0, 1 and 2. If your program is very long it is unlikely that you'll have enough memory for the 20k screen modes, so you must use mode 4 or 5. If, though, your program is short, you could use the other modes.

The screen mode also reflects the number of colours you can use on the screen at any one time. If you require all 16 colours you will need to use mode 2. Modes 1 and 5 allow a total of four colours on-screen together, while in all other modes you can have just two.

The text modes simply reflect the number of columns and lines on the screen. Mode 0 can place 32 lines of 80 characters across the screen, while mode 6 is capable of displaying 25 lines of 40 charac-

ters. Colour is allowed in both text modes but is limited to just two colours.

If you own a Beeb you can mix text and teletext graphics in mode 7 using just 1k of memory and a full range of colours are also available. This very economic use of memory is made possible by the inclusion of a special chip within the Beeb – the Teletext chip.

Sadly the Electron doesn't have this chip so these mode 7 facilities are not available.

Q I have had my BBC micro for nearly a year and I'm thinking of buying a disc drive. I have built up a small library of programs on cassette which includes those I've purchased and listings I have typed in from magazines.

How easy is it to transfer these programs from cassette to disc? I am not interested in pirating a large quantity of copies but do not want to buy a disc drive only to find that I'm still reliant on cassettes for my existing programs, or have to buy additional disc copies of software I already have.

Alan Helmore

Dubai

A You will have no trouble transferring the programs you have typed in from magazines, except that you may have to alter the value of PAGE. The easiest way, however, would be to transfer them by using something like *Disc Doctor*.

As for the commercial programs – you probably won't be able to transfer these because of the protection that manufacturers build in, but some companies, such as Acornsoft, offer an upgrade service for very little cost.

I wouldn't let owning a cassette library put me off buying a disc drive – discs are so fast and convenient.

&

One finger and half a brain are all you need to make music on the new Music System.

You're looking at a composer.
It's hard to believe, I know. But
with the aid of The Music System
program, he has just written a
whole 'song' completely by himself.

Clever boy.

"Toxteth Dawn" is the name of
the 'song'.

It's a love song.

Without any knowledge of
music he bought the music system
program, went home,
booted it up on his dad's
BBC B and started to
create.

He used the synthesiser part of the program
to make a few noises.

Added a pinch of an old song from
the Song and Sound Library.

Laid down some percussion.
And put a hint of bassoon and
strings over the top.

And hey presto.

The musical answer to zits.
"Toxteth Dawn."

Because his dad's computer
had a printer as well, the program
even printed out the composition
in full musical-manuscript form.

So he could show it to the rest
of the band. And they could say.
'WOSSAT?'

Isn't it time you
became a composer
too?

The brand new
Music System from
Island Logic.

FROM SMALL ACORNS, SOLIDISK GROWS.

IN JULY 1983, we released the Sideways RAM for the BBC computer. We sold 5 in the first week, 10 in the second week, 20 in the third and one year later, we sell more than 500 in the UK and well more than 100 a week abroad.

By the time you read this, more than 30,000 Solidisk Sideways RAM boards will be beaver away in hundreds of schools and thousands of homes.

They are being joined by thousands of Solidisk DDFS each month. Soon, we hope, they will all be linked together by Solidisk Single Chip MODEM.

To support the users, a network of Solidisk Local Experts, covering the UK, Holland, France, Australia and Israel has been set up and expanding. Providing fitting and software.

SOLIDISK DOUBLE DENSITY DFS 1.5:

Single and Double Density.

Automatic Density Selection.

1 or Twin Drives, 40 and 80 Tracks, Single and Double Sided.

Automatic 40 and 80 Track Selection.

31 Filenames.

Low Cost.

SOLIDISK DOUBLE DENSITY DFS 2.0:

Virtually Unlimited Number of Filenames.

Automatic Tape to Disk.

Built-in Disk Fix and Disk Sector Editor.

Built-in Wordprocessor.

Does not Require DNFS With Z80 and 6502 Second Processors.

SOLIDISK SIDEWAYS RAM:

Add from 16k to 256k bytes of RAM to the BBC 32k RAM.

Useable for running Sideways ROM Software.

Useable in Networks or on BBC with Disk Drive(s).

Compatible With All Acorn Existing Products.

Including Econet, Teletext, 6502 and Z80 Second Processors.

Compatible With Most Sideways ROM Software.

Available Multi User Licencing Agreement from Leading Software Houses.

Easily Expandable as Your Needs Grow.

Low Cost.

Free Installation if Required.

Very large User Base, Extensive Free Software.

Local Help by Solidisk Local Expert Network.

Free Membership to receive Periodic Newsletters.

COMING SOON:

SOLIDISK is at present developing a state of the art MODEM. This will be compatible with the CCITT V23 and BELL 202 transmission standards at speeds from 5 to 1200 Bauds and will be based on the TMS 3105 single chip FSK MODEM manufactured by TEXAS Instruments.

The price is expected to be £39.95 inclusive of VAT.

We need you and your help. To make Solidisk Users the largest BBC Users Group. To share good ideas and good ways to use them.

If you take your Disk Systems seriously then there are very few viable alternatives to our new Double Density Filing System.

Anyone, with their ear to the ground, will probably have heard of the great shortage of the 8271 Floppy Disk Controller chip. This chip is, of course, the basis of all single density DFS upgrades for the BBC Microcomputer and is used extensively by Acorn, AMCOM and Watford Electronics in their respective DFS's.

This shortage can mean long delays or paying much inflated prices to obtain your Disk Upgrade.

Now, however, we at SOLIDISK have developed an alternative system with many advantages over the 8271 based upgrades. Not the least of these being continuation of supply of the FDC chip (Western Digital 1770) but, also, improvements in the speed and versatility of operation.

EASY TO INSTALL

The SOLIDISK DDFS comes complete with an easy to follow manual with step by step installation instructions, and can be fitted in just a few minutes by anyone with just the barest knowledge of the insides of their BBC.

The DFS contains just 4 IC's and 2 jumpers to be inserted and one link to be cut in the computer. This is compared to the usual upgrades which require 11 IC's to be fitted and the link to be cut.

EASY TO USE

The SOLIDISK DDFS Revision 1.5 contains many time and labour saving features. These include formatter, verifier, automatic density sensing, automatic 40/80 track switching and Single/Double Density mass copying etc.

COMPLETE CONTROL OVER THE DISK

SOLIDISK DDFS gives you complete control over your disk drive(s). You can use any combination of Single/Double Density, 40 or 80 tracks in one or two disk drives.

Every time the SOLIDISK DDFS accesses the disk it detects the density and the disc size in use and acts accordingly.

You can for example copy from a 40 to an 80 track disc on the same 80 track disk drive or even format a 40 track disk in an 80 track drive using the automatic disc size sensing in the DDFS. It is also possible to have one side of a disc formatted in Single Density and the other side in Double Density. Also copying between different densities is coped with automatically and, when using twin drives, is very fast.

GREATER DISC CAPACITY

When formatting a disk with the SOLIDISK DDFS you have a choice of the usual Single Density or the increased capacity Double Density.

Formatting in Single Density will leave your disk compatible with all other Single Density systems. However if the disk is formatted in Double Density it will have a 60% greater capacity than the equivalent size Single Density disk. This means that on an 80 track disk that the capacity is increased from the usual 400 kbytes to 640 kbytes of storage. The Double Density Format used is, at present, unique to the SOLIDISK DDFS and provides 16 sectors per track as opposed to the usual 10 sectors in Single Density giving a 40% saving in media surface for a file of given length over Single Density.

INCREASED SPEED OF OPERATION

As mentioned previously a disk formatted in Double Density uses about 40% less disk space per given length of file than does a disk formatted in Single Density or alternatively it holds 60% more information per track. This allows the, already fast, SOLIDISK DDFS to run very fast in the Double Density mode as demonstrated in the benchmark test on the next page.

CUT THE COST OF

DISK DRIVES

BENCHMARK OUTSTANDING PERFORMANCE:

The table below shows the benchmark timing for STL DDFS 1.4. The benchmark consists of disk operations such as save and load a 16k program, open and close files, BPUT, BGET strings and numbers, format and verify a disk etc., and is available upon request, otherwise listed in Solidisk DDFS User Manual.

The benchmark tests B1 to B9 are the same as used by many reviewers. The time is expressed in seconds and parts of 100th of a second. The disk drives are twin 40/80 track double sided MITSUBISHI M4853, the diskettes are Verbatim Datalife MD 557 series, 96 TPI, double density, double sided, pre-verified to ensure that the media is free of all error and mechanical defects and containing solely the benchmark program. The test is loaded into memory, the drive motors are allowed to stop completely 2 seconds between tests, 10 timing samples are taken and the mean time is calculated automatically.

For example:

100 DEFFN61:REM Save a 16k program.

110T% = TIME

120 *SAVE A 8000 +4000

130 ÷ TIME = T%

Full listings are included in the User Manual.

This FN is called 10 times with 3 sec. interval, the mean result is printed as 'B1'.

BENCHMARK DESCRIPTION	S/D TIME	D/D TIME
B1 Save 16k	2.62	1.43
B2 Load 16k	2.45	1.23
B3 Openin and close 100 times	20.70	20.16
B4 Openout and print 1000 numbers (255)	5.84	4.66
B5 Openin and input 1000 numbers (255)	4.72	4.14
B6 Openout and print 100 80 bytes strings	6.18	4.91
B7 Openin and input 100 80 bytes strings	4.90	4.31
B8 BPUT 100 bytes (255)	3.01	2.06
B9 BGET 1000 bytes (255)	1.88	1.52

Note 1: Whenever a file is to be opened, STL DDFS automatically refreshes the disk directory, thus preventing erroneous disk change. Many other DFS's do not take the same care, although yielding a much shorter time, and this could accidentally stop the program.

OPERATIONS	S/D TIME	D/D TIME
FORMAT 40 TRACKS:	17.74	17.74
FORMAT 80 TRACKS:	33.22	33.22
VERIFY 40 TRACKS:	9.30	9.30
VERIFY 80 TRACKS:	17.84	17.84
BACKUP 01 80 TRACKS:	37.69	37.69
BACKUP 02 80 TRACKS:	39.46	39.46
COMPACT 100K 10 FILES	22.42	18.82
With Wordwise:		
Load 2000 words (17811 bytes) 16.80 sec. (41.40 sec. with AC).		
With Scribe:		
Count 2000 words (17811 bytes) 4.20 sec. (9.80 sec. with AC.90 DFS)		
With Beebug's Masterfile:		
Sort records 1 to 20 in PEOPLE sample database, the database is presorted on field 2 then the program is asked to sort on field 1, the time is then taken: 56.23 sec. (127.86 sec. with AC.90 DFS).		
These timings are improved even further in double density mode.		

The figures speak for themselves.

STL DDFS dramatically increases the operating speed of your software, including wordprocessors like Wordwise, View, Scribe, databases like Masterfile, Starbase etc.

Solidisk engineers won't stop there.

MITSUBISHI DISK DRIVE:
From the new VLSI ultra quiet auto spin-up series comes the MITSUBISHI M4853. We have chosen it for its speed, quiet performance, low power consumption and state of the art design — look at the following features:
— new developments by Motorola and Mitsubishi largely reduce the area taken up by electronics, leaving more room for the diskette. This in turn implies lower noise levels and reduced friction on diskettes.

8 Slim 5.25" half height model attractively cased in BBC micro beige
— Reliability, we find that Mitsubishi compares most favourably with other makes
— Use your BBC own power supply —
— Single and double density available, plus ability to read 40 track diskettes formatted elsewhere when used with our DFS

Of course, we don't need to mention that all drives come complete with Dual leads letting you add instantly a second disk drive and manual together with full guarantee on parts and labour.

EXTRA FEATURES OF SOLIDISK DDFS 2.0

With the production of the SOLIDISK DDFS 2.0 ROM we raise the already high standard of the previous DDFS 1.5 ROM.

The larger memory capacity of the DDFS 2.0 has allowed inclusion of a Wordprocessor and complete Disk Toolkit as well as a totally new concept in the working of the Disk Directory.

This will, we feel, make the SOLIDISK DDFS 2.0 ROM the most powerful Disk System currently available.

1) EXTENDED NUMBER OF FILENAMES

The standard number of filenames on the BBC microcomputer is limited to 31 on most Single Density DFS's. This usually presents no problem on a system using 40 track drives but when using either 80 track drives and/or a Double Density Filing System this number will quite often be reached with a lot of the disk space still unused.

The SOLIDISK DDFS 2.0 ROM uses a unique and novel way to circumvent this shortcoming as every time a catalogue becomes full a new one is created. This gives the possibility of having up to 1502 filenames on a normal 80 Track Double Sided disk. Even with this large number of filenames worst case access taking only just over 2 seconds. Obviously with large files and a lesser number of filenames the access time decreases dramatically.

The way that the DDFS 2.0 ROM operates means that ordinary single catalogue discs are completely compatible with our system and, indeed, will be upgraded to multi catalogue once the number of filenames exceeds 31. This means no special formatting is necessary and that the disc remains compatible with other Single Density DFS's.

2) DISK TOOLKIT

Included on the SOLIDISK DDFS 2.0 ROM is a powerful disk repair facility. It is possible to read a complete track into memory and to repair or modify the data before restoring the track to the disk. If only one sector needs to be worked on then this too is possible with the Disk Sector Editor contained in the DDFS 2.0.

A powerful Disk Copy routine is also included to allow most non-standard format disks to be duplicated. This routine will also display the Sector I.D. Fields so that it is possible to see the make-up of the track being copied.

3) WORDPROCESSOR:

SOLIDISK DDFS 2.0 ROM contains a Word Processor with many excellent features such as 80 column screen, automatic on screen justification, Search and Replace, Block Move and Copy etc.

SOLIDISK+MITSUBISHI BIG DEAL:

This is exactly what you would receive:

- one double sided 80 track Mitsubishi M4853 disk drive, cased in beige.
- one Solidisk Double density disk interface (complete with STL DDFS 1.5 ROM) as described overleaf, giving a total capacity of 640K.
- Dual leads and instruction manual.
- 5 Software Diskettes containing a selection of the most prestigious programs written for the BBC.
- full one year guarantee.
- all for £209.95 including VAT and post and packing.

THE HARDWARE:

As described earlier and opposite.

THE SOFTWARE:

A selection of 6 programs based on ease of use, and popularity. All efforts are made so that you would not have to read the manual twice.

All programs feature on screen help (word processor) or option menus throughout. Mode 3 is used throughout whenever possible for good visual representation.

— Solicalc —

A Disc Based electronic spreadsheet made only possible with the speed of Solidisk DDFS. The sheet size can be as big as 170 kbytes. Written in modules, it is easily upgradable. Mode 3 screen. Goto, Calculate, Replicate, Automatic Header etc.

— Solidisk Datafile —

A fast, efficient and random access Database. Solidisk Datafile features:

- Compact size.
- 80 column screen throughout.
- 15 fields of 60 characters per card.
- Unlimited number of cards.
- Powerful Screen Editing allowing VERY FAST data entry on new cards or data correction on old cards.
- All Maths functions on ALL fields admitting Symbolic Variables (like A, B, C, D etc) for entering formulae.
- Special SORT program making use of any free disk space to avoid swapping cards.
- Standard options include View, Print using Tabulation, Print Labels, Search on any number of criteria and repeat on count, Amend, Create, Spool to disk, Append and Mailmerge with Solidisk Word Processor (requires EPSON compatible printer).
- Ability to read BEEBUG's Masterfile and possibly other systems later on.

— Solidisk wordprocessor —

On screen help, Wordstar style cursor editing and control keys, on screen justification while you type, Block commands, Quick commands and dot commands for mailmerge. Future development will allow reading Wordstar text from the Z80 second processor. Solidisk can offer Laser Typesetting and Page Planning service: it costs you only £1.00 for typesetting 1×A4 page (around 4,000 characters) from disk received by MODEM.

— Stock control —

useful for small businesses. Features include menu driven, easy to follow instructions, easy categorising. Stock evaluation reports and inventories, together with price lists and reorder forms can be printed automatically as requested.

— Sillexicon — the most successful spelling checker with English, French and German dictionaries, together with self generating capability.

— Macrobasic —

a BASIC program generator capable of using bits of old programs to create new ones. Clever ideas — clever ideas of making them work!

Please note that this software is only free as part of the package deal. It is otherwise available at a cost of £14. Customers who would prefer the DFDC version of our disk filing system (see earlier) can purchase the package deal with this option for an extra £10.

What we may need to tell you is that the price is also agreeably low — check what we offer against any of our competitors — which all adds up to a high degree of sophistication affordable to students and businessmen alike.

INTRODUCING THE DFDC!

For those who already have the Acorn DDFS installed in their computer and would like the advantages of increased speed and storage capacity that Double Density systems offer SOLIDISK have introduced a totally new concept in the shape of the DFDC!

The DFDC board simply sits in place of the 8271 FDC, this being reinstalled in the DFDC board. Now all that needs to be done is to install the DDFS ROM into a Rom Socket, to the right of the existing Acorn DFS, and two other minor connections.

Great Value at £49.95 inc.

HAS YOUR BBC COMPUTER GOT ITS SIDEWAYS RAM BOARD YET?

"Break the Ram Barrier" (A&B)

HOW TO ORDER?

You can order any item using the coupon. Prices are inclusive of VAT, post and packing. Access and Barclay card holders can place their order by phone. Educational authorities, Acorn dealers and OEMs can obtain quantity discounts.

OTHER PRODUCTS FROM SOLIDISK: UVIPAC EPROM ERASER:

You'd be surprised how quickly your child can learn from it.

Logo from Acornsoft is a computer language specially designed to encourage a child's natural curiosity and stimulate logical thinking.

The Logo turtle (actually an on-screen triangle) creates a learning environment that's as much fun as the most exciting computer game.

And it's quick and easy to learn, even for children as young as four.

Using everyday language, the child gives simple commands involving distance and direction.

As the turtle transforms abstract ideas into concrete images, it combines the fundamentals of geometry and numbers with the basics of computer programming.

Logo also makes full use of the excellent graphics of your BBC Micro or Acorn Electron, offering brilliant multi-colour displays.

Not surprisingly, Logo is already very popular in schools and at home.

After all, it can turn your microcomputer into an ingenious and challenging learning tool.

And your child into a clear and logical thinker.

All for £69.

The Logo package comes complete with instruction manuals.

POWERFUL NEW ROMS FOR THE BBC

Never before has there been
such a range of powerful but
easy to use ROMS for the
BBC

ENIGMA DISC IMAGER

Enigma Disc Imager is a 16K ROM which will give you 29 additional powerful disc commands. Some of which are: Enigma will IMAGE ANY DISC, Copy sectors, Repair bad tracks, Read deleted or special sectors, Dumps roms to disc, Loads roms from disc to sideways ram, Moves a programme up or down in memory, Unlocks locked tapes, Locks your tapes, Dumps cassette to disc, Global or selective renaming of directories, Writes deleted or special sectors to disc, Track and sector ID editor facilities, Selective file copier, Formats discs to be 40/80 track compatible (requires an 80 track drive with this command), Special disc editor to cope with protected discs, Special formatter to format discs with non standard tracks, Inserts new files into the catalogue, Enigma makes easy work of editing, copying, repairing, etc., of both standard and non standard discs.

ENIGMA DISC IMAGER IS TUBE COMPATIBLE ALTRA PROBE

Altra Probe is a 16K ROM which will give you 59 additional powerful machine commands. Some of which are: Altra Probe will list a basic programme straight from file, Formats basic assembler text output, Disassembles, Unpacks, Super Packs, Relocates, Edits memory, Switches off roms, Lists roms, Copies roms to specified address. Calculates free memory, Copies screen text to printer, Lists all specific types of basic variables and values, Graphics dump for Epson or NEC printers, Calculates and details free space on a disc, On board formatter which will automatically format a dual disc, Onboard formatter and verifier. Repairs bad tracks, Disc sector editor, Turns the tube on and off. These are only a few of the commands available from Altra Probe. Altra Probe makes easy work of editing, programme development, etc.

Altra Probe is available in two versions. PROBE 1 and PROBE 2

ALTRA PROBE 2 IS TUBE COMPATIBLE BASIC ED

Basic Ed, is on 8K ROM which contains 21 additional commands. They are: \$ search, List matches, Number matches, Global replace, Selective replace, Bad programme relink, Copy lines from one part of a programme to another, Format a listing, Move, Super pack, Renumber, Table line references, Unpack, Variables X ref, List entire programme, Keyboard immediate mode, Printer on/off, Paged mode on/off, List match lines, Concatenate, Strips rem, spaces etc. Altra Basic Ed. is an essential helpful tool for the Basic / Assembler programmer. Altra Basic Ed. is available in two versions. Basic Ed. 1 and Basic Ed. 2.

ALTRA BASIC ED. 2 IS TUBE COMPATIBLE FIRST AID 1.1

First Aid 1.1 is an 8K ROM which contains 19 additional commands. They are: Machine code disassembler, Hex and ASCII dump, Sideways rom to ram copier, Function key predefined facilities, Variable table listing, Memory space free calculator, Checksum calculator, Rom lister, String search, Define function keys with strings, Rem and space Stripper, Bad programme fixer, Clear all variables, Clear ram from &0400 to &8000, Machine code monitor, First Aid 1.1 as a language, Lists O.S. calls with their vectors, Lists the first 24 control codes. Altra First Aid 1.1 was designed to assist the Basic / Assembler programmer and the sideways rom user.

PICTURE ANIMATOR

Picture Animator is a mode 7 disc based high quality text and picture editor which lets you compose very sophisticated moving pictures. An ideal tool for the person who wishes to exploit the BBC micros teletex mode. The software is easy to use and your work can be saved to tape or disc.

MUSIC MAESTRO

Music Maestro is a superior and comprehensive disc based sound and music composer. All the sound facilities in the BBC are Utilised. Envelope composition is displayed graphically to assist you in determining the wave form required. Almost any musical instruments voice can be created and reproduced from the BBC. Music Maestro is simple to use and will save your symphony or tune to cassette or disc.

Micronet 800.

Stretching the mind of your micro far beyond its limits.

Micro evolution continues with this unique communications, information and software system. Set on our mainframes nationwide.

Includes 30,000 pages and access to Prestel™ with its full range of services.

A tremendous Communications section that networks you to thousands of other members across the country. Send and receive electronic messages and graphics at a touch of a button.

And there's the Chatline service, Swapshop and Teleshopping.

Check with daily updates on the very latest computer news.

Micronet also has its own huge facts data base.

And a choice of up-to-the-minute software to download absolutely free.

For only £13 a quarter and just a local telephone call whenever you want to connect up (that's only 22p per half hour at cheap rates) you could be part of Micronet.

The only accessory you need is a Modem.

A small price to pay to join the other visionaries on this exciting new system.

Fill in the coupon for more details and send to Micronet 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

But be warned, Micronet 800's features are almost limitless and constantly updating. So maybe you'd be better to call in at Laskys, John Lewis, main Boots or your local Micronet 800 Action Station.

To feast your eyes on all the amazing things it can do.

To: MICRONET 800, Durrant House, 8 Herbal Hill,
London EC1R 5EJ, Telephone 01-278 3143.

MODEMS

Pace Nightingale	£135.00
(inc Comstar ROM)	£155.00

WS2000

A world standard modem switchable between 75, 300/300, 600, 1200/75, 75/1200 baud rate. This is the only modem you would ever likely to need to communicate with any computer throughout the world.

Modem	£148.00
Lead	£7.50
Auto-Dial	£34.00
Auto-Dial Cable	£4.50
Auto-Answer Card	£34.00

Telemod 2

Switchable modem between 1200/75 and 1200/1200 baud rate that allows you to communicate with services like Micronet, Prestel, Easylink or with other computer users at 1200 baud rate.

Modem	£84.00
Lead	£5.00
Software	£19.95

Telemod 3

BT approved - switchable between 75, 300/300, 1200/75, 75/1200 and allows you to communicate virtually anywhere in the world. It will allow you to communicate with services like Micronet, Telecom Gold, Prestel, One-to-One, Easylink, Microweb. It comes as a standard with built in board for auto-answer.

Modem	£170.00
Lead	£8.00
Software	£19.95

BBC BUSINESS SOFTWARE

(dual)	£10.00

EXPANSION BOARDS

RAVEN-20 BOARD

The RAVEN-20 is a 20K RAM EXPANSION for the BBC Micro, Model B, fitted with O.S. 1.2.

This specially designed product plugs in to the CPU socket of your micro (centre socket of the 3 available) with the minimum of effort. The pins are specially custom made, thus avoiding any possible damage to the circuitry.

The RAVEN board provides the user with an extra 20K of usable RAM in screen modes 0 to 3. This together with the aid of software makes the system completely transparent to both the user and the computer.

The RAVEN-20 software ROM gives much more than

just the standard commands, it has been programmed to give more and better commands! Priced at £69.95 inclusive of VAT. Please add £1.50 for post and packing.

RAM-ROM BOARD

The RAM-ROM extension board gives an extra 6 sockets for extra ROM's and 2 slots of RAM. This RAM is not an extension of BASIC. It is intended that the RAM be used to develop your own ROM based software. There are in fact seven sockets on the board, the 7th replaces the socket on the main board that would otherwise be taken by the ROM board. (The RAM-ROM board can accommodate both 2764 type EPROMS as well as 27128 EPROMS and ROM).

The RAMAMP board will not cause overheating. It comes with fully fitting instructions, tested and heat tested before despatch.

Prices: 1 x 16K RAM fitted £55.00. 2 x 16K RAM fitted £65.00

MIND YOUR LANGUAGE

What languages are there other than Basic and why should you learn one? Joe Telford prefaces a new series

RECENTLY, at an international conference on using micros, out of a team of 10 guides only two or three could speak French more than passably, yet five thought of 6502 assembler as being their 'second language'. So the time seems ripe to look at the range of languages other than Basic available for the BBC; why you might want to learn another; and which would best suit your needs.

Since the late 1960s talking to computers has become easier. At around that time, the original Basic language was written at Dartmouth College in the USA, because students needed to learn computing by devising and running their own programs on the computer rather than having their programs run for them by an operator (batch processing). Batch processing still exists, but almost exclusively on mainframe (very large) computers.

Basic was one of the few interactive languages around when Altair, CBM, Apple and others began to build personal computers, and because of the ease with which it could be implemented and its apparent success, it became the resident language of all the early computers.

Basic has 'sort of growed' (just like Topsy) and manufacturers were afraid to produce a machine which didn't have the mythical standard Basic as a built-in feature, leading to the Basic snowball - every machine must have Basic because that's what everyone knows, because every machine has Basic. Changing a manufacturer's primary resident language from Basic is very difficult. A recent example is the Jupiter Ace, using Forth in ROM, which has not sold in the same quantities as the more popular micros.

So most people are stuck with Basic. The question whether or not they like

it is not regarded as important, because many will not have heard of any other language. Having taken a good deal of effort to learn Basic, why should they then try to learn other languages? What value is there, for example, for the average user to learn Lisp? We need to have a good reason for using and hence having to learn another language.

Why learn another language?

The main reasons for learning another language are:

- It has features which a current language doesn't.
- A certain application requires a particular programming approach not available in the current language.
- It has improved speed, accuracy or memory usage.

A typical example is the user who can program competently in Basic, but who finds that a section of his program has to communicate with the outside world every 50 micro seconds. To solve this problem he or she will need to learn assembly language and understand something of machine code.

Another reason is that because microcomputer technology is advancing so quickly, the skills we learned as programmers five years ago are becoming outdated. Consider a machine which includes parallel processing and direct access to over one megabyte of user memory, as well as input by voice or mouse. OK, it isn't a BBC micro, but it could be an ABC (rumoured to be about two months from the shops). In five years (or less) who knows what the average £400 micro will consist of? One thing is sure. For those who want to be able to program such a beast, then the new skills will be those of structuring programs; structuring

data; modularising inside and between programs; communicating between modules; writing for multitasking and transporting programs between machines.

Children are learning languages more appropriate than Basic to their stage of learning development, so they grow up to be very selective about their choice of language for computer dialogue.

What languages?

To be fair, we need to get a feeling for all the languages available. Some, like Cobol or Fortran, aren't yet accessible on the BBC micro without its various add-on second processors. We will be devoting a complete article to each of those already available for the BBC micro itself. The range of languages is quite long: Basic, 6502 assembler, Forth, Logo, Comal, Prolog, BCPL, Lisp, Pascal and Microtext. These can be split into two categories: low and high level languages.

Low level languages

Low level languages are those more easily understood by the micro than by man. They are usually input in mnemonic form using short code words which can be assembled directly into machine code. The program will mean little if read by the programmer, but will run quickly in the computer as it doesn't have to translate it into machine code. The Beeb has its own built-in assembler, which we can regard as the only true low level language on our list.

High level languages

The main characteristic of high level languages is that they are based on words or sentences closely allied to the English language and so are more easily understood by humans than by

the computer, but are slow to run. Importance is attached to performing a task with the minimum of programming effort, so, that many high level languages include techniques for looping, memory management etc. There are two occasionally overlapping subclasses: interpretive languages and compiled languages.

Most of the current high level languages for the Beeb are called interpreters. Their aim is to take a program written in a high level language and during its execution, translate it one line or block at a time into a machine code format, and then execute that small piece of code. This translation followed by execution is repeated until the program concludes. Interpreters are notoriously slow, although the BBC Basic interpreter is one of the fastest.

Compiled languages are not usually found on micros, because of memory restrictions. Where compilers exist, they are often afterthoughts. A compiler is a piece of software which takes a program written in a high level language and converts it completely to machine code, which can then be run. There are three main types of compiler: P-code compilers, compilers requiring a run-time library and full stand-alone code compilers, and users should choose one appropriate to their task.

P-code compilers translate the high level code into a compressed version which can be easily converted into machine code. This is done by part of the compiler at the time when the program runs. If you have this type of compiler you can write programs only for people with a matching compiler.

Some compilers include library routines for multiplication etc, which are supplied as a block of memory to be used at the time when the compiled code is run. Users with this type of compiler will need to license any programs they write from the compiler manufacturer, because they will be selling a block of the manufacturer's code with their own product.

While these types produce concise code, the stand-alone compiler often produces more expanded code which takes up a good deal of memory, although the code runs quickly and can be transferred between systems.

Any study of languages must also include compilers and interpreters, because the language type dictates its speed; transportability and memory requirements.

Forth

At about the same time that John Kemeny and Thomas Kurtz were producing Basic, Charles Moore was working on the Forth language. He

needed a language to implement computer control of machinery, which was versatile, quick and simple. In machine terms even BBC Basic is slow at measuring and working in short time intervals. In its initial form Forth is not aimed at string or array manipulation, although these facilities can be added as the user's expertise grows.

Programs in Forth are created by defining a word in a particular way. Each new word becomes part of the Forth dictionary and is usually compiled on entry to it. Once a word has been created it can be used in the definition of other words. As each word is added to the dictionary, it takes with it the information as to where the compiled code is situated. This is in the form of pointers, and so one word can point to another and to a further word, before reaching the machine code core. These pointers form threads through the dictionary, and so Forth is called a 'threaded language'.

The main benefits of Forth include conciseness, speed because of its compiled nature, ease of writing because of its high-level nature, and structure.

The structure of Forth may not initially seem to be evident, yet because of its nature of defining words, Forth can be easily structured using a 'top-down' approach (ie, we start with the task to be undertaken and then acquire the tools to solve it, rather than by learning fundamental skills so that we can fulfil the task). If we decide that a particular program must solve a certain task, we can start by giving that task a name. As an example let's simply print a 7 by 10 block of stars on the screen. We can call the overall task 'BLOCK' and its aim is to print out a number of lines of stars. Call the task of printing one line of stars 'LINE'. LINE needs the assistance of a further word called 'STAR'. STAR's aim is to print a single * on the screen. We might imagine the structure looks like this:

```
(BLOCK calls (LINE calls (STAR) 7
times) 10 times)
```

although the program would be defined from STAR outward as follows:

```
: STAR 42 EMIT ;
: LINE 10 DO STAR LOOP CR ;
: BLOCK CR 7 0 DO LINE LOOP ;
```

Typing BLOCK and pressing return

executes the Forth program, which matches the Basic program:

```
10 FOR I% = 1 TO 7
20 PROCline
30 NEXT
40 DEFPROCline
50 FOR J% = 1 TO 10
60 PROCstar
70 NEXT
80 PRINT
90 ENDPROC
100 DEFPROCstar
110 PRINT "****";
120 ENDPROC
```

Despite the 'new' vocabulary, it's very difficult to produce unstructured Forth programs because of the lack of line-number-oriented commands.

One of the problems which worries newcomers to Forth is its method of calculation based on Reverse Polish Notation. RPN was used on the older calculators because it is speedy when applied to a stack. In Forth, a stack is simply a temporary workspace for calculations. The stack format means that arithmetic is swift, but the way in which calculations are performed must be observed carefully. For example, 1 + 2 is entered as 1 2 + so that the items 1 and 2 go onto the stack and the plus sign adds the top two stack items. Forth has been around for quite a while, its number of devotees is gradually increasing and it is well worth examining.

Logo

One of the most fêted languages of recent times, Logo is regarded by many as the most appropriate language for early learning. Again, Logo is a language with its roots in the 1960s. It was designed in Cambridge, Massachusetts by Wallace Feurzeig, Daniel Bobrow and Seymour Papert. Seymour Papert in particular has done much to popularise the language through his lectures and writings.

Part of the reason for creating Logo was that programming might be an appropriate tool for children to use in exploring various learning environments. The language is intended to be adaptable to the needs of all children, and so is easy to use at the simplest levels, but capable of powerful processing for older children and adults.

One current school of thought suggests that in programming a child can

manufactured by Servicon Dynamics, a company with over 15 consecutive years of specialist electronic manufacturing experience. All items carry a 12 month warranty.

- Completely compatible with 5.25" drives
- Full software support (plus INNER CIRCLE CLUB*)
- Full disk interface system for BBC
- No power supply needed
- Exclusive low cost accessories through INNER CIRCLE CLUB*
- One-touch disk load/unload
- Compact and lightweight

New Crescent range upgrade for BBC micro.

develop skills, techniques and (more importantly) concepts which relate to a number of areas of experience outside the programming activity itself. The Logo philosophy suggests that some important skills a child needs might include thinking logically; thinking intuitively; solving 'real' problems; hypothesising and testing hypotheses; predicting, planning and sequencing information; and modifying solutions.

All these activities are part of the 'real' world, and perhaps use could be made of any agent which supports this type of learning. Logo was designed to allow such activities to take place within the realm of programming.

The first time someone uses Logo they often think it's a relatively trivial language whose whole aim in life is to draw lines on a screen, because the usual introduction to Logo is its turtle graphics, which are a major part of the language. A turtle can be directed around the screen leaving a trail as it moves. Its position is controlled by keywords like Forward, Back, Left, Right, Penup and Pendown. Until the development of 'proper' Logo, all the 'toy' Logos had relied heavily on the turtle graphics features.

Logo has its roots in the Lisp artificial intelligence language, and is heavily biased towards list processing. Items inside lists can be data or commands, and very powerful routines can be built up to process these lists.

The other important part of Logo is that new words can be added to it, but, unlike Forth, these are regarded as procedures. They can be called by name, but remain as separate entities ready for interpretation in the RAM space available to the user. Because of this, Logo is regarded as an interpreted language.

The benefits of Logo include its initial ease of learning; simple access to powerful facilities, eg, recursion; structured approach, preventing bad programming habits; automatic support of the problem solving approach; and fostering of the use of microworld environments. Its ease of use and structured approach mean that you can write programs which would be quite complicated in Basic in a number of seconds. Take, for example, this section of Basic which draws a circle:

```
9300 DEFPROCcircle (x, y, r)
9310 LOCAL z, x%, y%
9320 MOVE x+r, y
9330 FOR z=0 TO 2*PI+0.2
STEP 0.2
9340 DRAW x+r*COSz,
y+r*SINz
9350 NEXT: ENDPROC
```

In order to produce the program, the user would need to understand not only

FOR . . . NEXT loops but also the concept of local variables, the commands MOVE and DRAW, the meaning of pi, a good deal of trigonometry, especially the application of trig to circles, and of course the meaning of radius, and its relation to a circle. The routine would then be called by the line: PROCcircle (640, 512, 200). This would draw a circle in the centre of the screen with a radius of 200 units.

The same program in Logo might look like this:

```
TO CIRCLE :size
REPEAT 72 [FORWARD :size LEFT
5]
```

and could be called by a line: CIRCLE 20 which would draw a suitably large circle on the screen. The only concepts here are the understanding that a circle on screen is a duplicate of how a circle on the floor could be walked, and the Repeat loop. Forward and Left would, one hopes, be part of a user's previous experience.

Microworlds is an expression peculiar to Logo, because it describes the learning environment around a particular topic. For example, the Logo program below could be used by a maths teacher to let children explore the relationship between shape and angle:

```
TO SHAPE :angle :size
DOFOREVER [FORWARD :size
LEFT :angle]
END
```

In this microworld the child can specify the length of a side and the angle of turn of the turtle. Every angle will produce a different picture. The teacher can direct the child's exploration of the microworld by suggesting avenues like: which angle produces a square? how can I draw a star? what happens when I use SHAPE 180 100? which angles provide a closed shape?

In terms of learning by discovery the programming effort presented here has a large spin-off for both teacher and child.

Comal

The Common Algorithmic Language is a relative newcomer on the language scene. It was specified in Denmark by Benedict Loeffsted and Borge Christensen in 1973 and has a growing following of devotees. It was based on the desire

for a simple Basic-like language capable of encouraging problem solving at the level of more powerfully structured languages.

A typical comment from universities, higher education, and large companies involved with computing is that it is difficult to teach good programming practice to students who have been exposed to Basic as their initial language, as Basic has a weak structure, and a Basic 'standard' does not exist between machines.

Basic has been regarded as an all-purpose language, and this is one of the points in its favour. Comal is as flexible and simple to use, yet is capable of supporting the needs of programmers in the future either directly or by giving an introduction to the skills needed in using other languages.

When Comal was designed its models were Basic and Pascal. The result was a Pascal-like language which was rich in structures and yet had the flexibility of Basic. In many ways Comal is Basic plus a number of useful features, particularly in the area of loops and conditionals.

The benefits of Comal include: flexible Basic type environment; powerful structures available; no need for edit modes or program editors; supports modularity and transportability; and it eases the progression towards further high-level languages like Pascal.

For a programmer brought up on Basic, Comal is like a fairground packed with free rides. If the programmer takes time to explore the fair, all the old rides we know so well are still available but new ones have been added. For example the IF . . . THEN construction, which is complicated to use in Basic when several actions must take place, has become a multi-line statement:

```
1000 IF answer=correct THEN
1010 PRINT "WELL DONE"
1020 VDU7
1030 score:=score+1
1040 ELSE
1050 PRINT "TRY AGAIN"
1060 attempt:=attempt+1
1070 ENDIF
```

Also available are WHILE . . . END-WHILE loops, methods of handling multiple IF statements, more powerful filing routines, end of DATA markers, jumps to labels and entry-time syntax checking, among a host of goodies.

Borge Christensen has done much to publicise the Comal language through his writing, showing that as an initial or a second language it's a useful programming medium. A number of countries are looking at Comal as a contender for their secondary school programming language. page 77 ►

Prolog

The version of Prolog most often found on a microcomputer is Micro-Prolog, and we'll briefly examine it.

The Prolog language is based on *Programming in logic*, and all micro versions are based on an initial specification first implemented in 1973 in Marseilles. It's important to realise that Micro-Prolog is quite a leap away from conventional languages. Certainly it would be as much of a feat to drive a buggy with Micro-Prolog as it would be to create and interrogate a set of sentences in Basic.

Since the first machine language, programming has been carried out using a command language, eg:

```
100 CLS
110 PRINT "I am commanding the
    computer"
120 REPEAT
```

Each of these is a command. When a user is faced with a program, the most frequent comment is 'What does it do?' rather than 'How does it do what it does' and so the relationship between user and the program is different to that between the programmer and the program. Until Prolog appeared on the scene the programmer had to describe *how* a result was to be attained, rather than what was to be computed.

Take the situation where we want to find the lesser of two numbers. In Basic we might write:

```
100 INPUT x, y
110 IF x < y PRINT x
120 IF y < x PRINT y
130 IF x = y PRINT y
```

What we have done is to describe the action of the computer on each line of coding. Perhaps it would have been closer to the logical thinking process to describe the relationship between program input and program output. We might think to ourselves: 'We need to print out the lesser of two numbers entered.' In Prolog this type of descriptive specification could be used as the basis for a program. Unfortunately the English language is too ambiguous to be interpreted exactly, and so a standard form of logic called 'predicate' logic is used to create rules and relationships and to ask queries.

A Micro-Prolog program is basically a set of definitions about the relation-

ship of one item to another, eg:

```
Nick writes-for Acorn-User
George writes-for Acorn-User
Joe writes-for Acorn-User
Paul writes-for Acorn-User
Paul writes-for Mag-X
```

defines some of the relationships between imaginary writers and magazines. We can examine these by asking questions like:

which (x : x writes-for Acorn-User)

which gives:

```
Nick
George
Joe
Paul
```

and

which (x : Paul writes-for x)

which gives:

```
Acorn-User
Mag-X
```

Prolog is simultaneously a programming environment; a database environment; and a relational, mathematical and logical environment in which the user defines rules and requests information. Regarded as a fifth generation language, Prolog should be interesting to those for whom the 'what happens' is more important than the 'how it happens'.

BCPL

Another language which can be traced back to the late 1960s is BCPL (*Basic Combined Programming Language*). Its generator was a project by Cambridge and London universities which aimed to produce a 'combined programming language' or CPL. CPL was designed to be more powerful than earlier mainframe languages such as Algol, and to have a consistent block-based structure. The size and complexity of the project contributed to its eventual dissolution, which left the concepts and some techniques and ideas, but no real CPL implementation.

Part of the project was resurrected in a simplified form and the BCPL language was produced almost exactly in its present form.

BCPL is a compiler which has the benefits of being small, powerful, efficient, fast and capable of developing languages. This means that it can

be used to develop further language programs, and in fact the Acornsoft BCPL compiler is reputed to have been written in BCPL, as was the Acornsoft Logo language.

In its short lifetime BCPL has fathered a further language called C and this is a very powerful tool for use particularly with 16 and 32 bit micros. In fact the Unix operating system was written in C.

BCPL is similar in structure to Pascal, but unlike Pascal or Comal, it doesn't use real or integer numbers or strings of characters—it has only the BCPL 'word'. This may be regarded as a 16 bit integer on the BBC micro. Various operators can act on a BCPL word, and there is no reason why words cannot be regarded as text or numbers and handled to suit the programmer. It should be possible to add 'AA' to 'BB' and get a numeric result, if the programmer requires. BCPL has two particular points which users need to be wary of. First, it compiles to an intermediate condensed code, and so needs a run-time segment to interpret the condensed code. Second, BCPL will only handle capital letters.

A typical improvement on BBC Basic involves the structure based around the IF ... THEN ... ELSE statement. In Basic we might write:

```
1000 IF answer > lowest THEN IF
    answer < highest PRINT "In
    range" ELSE PRINT "Over
    range"
```

where entering an answer less than the lowest will cause an 'Over range' print-out. In BCPL we can specify more precisely:

```
IF answer > lowest
THEN
    TEST answer < highest
    THEN
        WRITES ("In range")
    ELSE
        WRITES ("Over range")
```

The speed and compilability of BCPL make it important for users wanting to write their own languages and to maintain clarity and structure in the code which they adopt.

Lisp

In the early 1960s John McCarthy and a group of colleagues at the Massachusetts Institute of Technology (MIT)

developed Lisp for use in *LIS* Processing. Lisp was followed by Fortran and Algol but in many ways has been more at home in the micro-age than either of them.

Lisp has become the leading language for artificial intelligence work, and has survived the transfer from mainframe to micro remarkably well. It enables users to consider all programming activities as functions, which are then processed to reach the result.

Consider some ways in which we can look at items of Basic:

```
100 Z=200
110 PRINT "GAME-ON!"
```

In Lisp these items are all regarded as functions:

```
(SETQ Z 200)
(PRINTC 'GAME-ON)
```

and more complicated lines of Basic appear as nested brackets, eg:

```
A=3*(4+5)
```

can be replaced by:

```
(SETQ A (TIMES 3 (PLUS 4 5)))
```

In Lisp these functions can be as deeply nested as the user needs. Logo users should be able to see some similarities with Lisp, particularly where lists are concerned, because Lisp has very powerful list processing facilities. Lists of words or numbers can be manipulated, created and used in many different ways. It's also possible to define functions using others which the system already knows. The language supports recursion so that a function can be defined to call itself.

One suggestion from Lisp devotees is that functional programming will follow structured programming, with its consequent loss of variables. The search to replicate human intelligence in a machine leads us to the possibility that the roots of artificial intelligence could lie in a functional language such as Lisp. A typical example might be the manipulation of English words in user-input sentences which the machine makes sense of. Certainly, natural language processing would require some form of learning capability on the part of the computer, as well as the ability to make sense of ambiguities, based on context.

Pascal

Pascal was proposed in 1968 and was named in honour of the French mathematician Blaise Pascal and as such its name is only an indication of the logical nature of the language. Pascal was derived from Algol 60 and has similarities in its structure.

Pascal is becoming more popular as

colleges and higher education increasingly reject Basic because of its poor structure. One good reason for learning Pascal is that it is an international standard, providing transportability of modules between programs and machines.

Pascal is not too difficult to learn providing a reasonable implementation is available – and Acornsoft have provided this with their ISO-Pascal. Despite it not compiling to stand-alone code, it's a fast and powerful language.

A Pascal program nominally consists of three parts: the program header; the declaration section; and the program body, with a defined end.

The program normally consists of a number of statements which are separated by semi-colons and terminated by a full-stop. The statements can be multi-line statements, or spread over just one line. No line numbers exist within the language.

The program header simply names the program and states what type of input and output channels will be used, eg, keyboard and screen.

The declaration part of the program introduces the variables to be used. Not only should we say what their names are, but also what will be found within the variables.

For example:

```
CONST
    week = 7
VAR
    day, month, year : INTEGER ;
    calendar : REAL ;
```

declares that 'week' is a constant and is set to seven, while the variables day, month and year are declared as integers, and calendar is regarded as a real (or decimal) number. Unfortunately strings are not easily defined and have to be built up from individual CHARs of the type associated with single character strings.

The main body of a Pascal program is based on structure blocks which include a wide range of loops and conditionals, as well as procedures. The aim of the language is to produce a direct and precise solution to a particular problem, and this is best done by forcing the programmer to approach the keyboard with the logical framework of the program already devised. To this end Pascal includes an editor

which allows source code to be manipulated. The end result after compiling is a form of P code which will run quickly in an interpretive fashion.

Pascal will appeal to programmers who need to transport programs between machines, for apart from extensions for sound and graphics, most implementations of Pascal are completely transportable. In addition, there is every chance that as languages become cheaper, the major educational establishments, particularly in higher education, will move completely to Pascal as their introductory language.

Authoring languages

We could not complete this round-up of languages for the BBC micro without mentioning authoring systems or languages. An authoring language aims to solve a particular subset of problems (often in instruction and training) by providing a very high level language system which a user with little formal programming expertise can configure to a particular application. The authoring language Microtext was reviewed in the October 1984 issue of *AU*.

A regular task performed by an authoring language is the interpretation of a student's replies. In Basic this would be tedious and often difficult to program. However, in an authoring language, such a facility would be built-in.

Most authoring languages operate in a 'group of three' technique. Information is presented to a student, an answer is requested, and as a result of that answer the program selects further extension, remedial or consolidatory information. The information may be in pictorial form, produced with the aid of advanced tools such as picture editors or, occasionally, specially designed keyboards.

The other facilities available are simple debugging to check that the program will function correctly and editing to alter program flow after testing. Some authoring systems may include built-in 'help' facilities to support the student who lacks confidence.

There is no doubt that authoring languages have a useful application in training and instruction, but whether that extends to all learning requires careful consideration.

Conclusion

Over the next few months we'll be presenting much more in-depth coverage of the languages summarised here. This will give readers a chance to focus more clearly on the problem we discussed at the start of this text – which is your second language and, more importantly, which should be your first?

LEADERS OF THE PACK

CUB 452 is the most popular 14" standard resolution range of colour monitors available.

Why? Well, the 452(H) x 585(V) tube resolution eliminates disappointing colour reception and poor character definition associated with domestic TV's and other colour monitors. Optimum compatibility means owners of BBC, ORIC 1, ATMOS, ACORN ELECTRON, RML 480Z and many others can plug in and they're in business. Amazingly, CUB 452 is the only colour monitor to interface directly with the SINCLAIR SPECTRUM.

Then there's CUB RGB/PAL, the one that really sets us apart from the others. This continues CUB's revolutionary

advance in high performance colour displays by producing brilliant images when used with a micro computer. Yet RGB/PAL also produces the highest quality pictures from LASER DISCS, VCR's and VIDEO CAMERAS. Add to this an audio facility, plus display of all TV broadcast channels when used with a VCR and the result is a versatile colour monitor which sounds as good as it looks. RGB/PAL is compatible with BBC(A&B), COMMODORE 64, APPLE series, DRAGON 32/64, TANDY, ORIC 1, RML 380Z & 480Z, SHARP, THE MSX RANGE and many others.

So now the leaders of the colour monitor pack give you a choice: CUB 452 or the revolutionary RGB/PAL – either way, you're on a winner.

– THE CUB STANDARD RESOLUTION COLOUR MONITOR

CUB 452 NOW AVAILABLE IN NEW PLASTIC CABINET
AND 20" SCREEN VERSION

MICROVITEC 452
CUB
COLOUR DISPLAYS

MICROVITEC PLC, Futures Way, Bolling Road,

Tel: (0274) 390011 Telex 517717

Available from High Street Computer Retailers and branches of W. H. Smith, Harrods, John Lewis Partnership, John Menzies with selected models available from larger branches of Boots.

YOU WANT to set-up, maintain, organise and use large collections of data.

YOU WANT the flexibility to change your files immediately when your needs change.

YOU WANT the power to store up to 26,600 records per file.

YOU WANT to incorporate your data with a word-processing facility.

YOU WANT to pay less than £30.

YOU NEED...

DATA**mind**er

Three integrated database packages in one system.

1 FILE CREATION

Create or redefine a file structure simply by entering or editing details.

2 REPORT WRITER

A stand alone word processor which you can merge with your own reports.

3 FILE ACCESS

General or specific search using any number of fields.

Features Include

- All drives treated as single unit.
- Retrieval time of 3-4 seconds.
- Up to 26,600 records in each file, (disk capacity and record size allowing).
- Maximum of 150 fields per record, (1200 bytes of text).
- Support for string, numeric, integer and data fields.
- 5 data formats and strings of up to 150 characters long allowed.
- Automatic allocation of disk space for files.
- Rapid switching between use of separate files.
- Batch updating and deleting of records.
- Optional program monitor enabling, among other things automatic checking of duplicated record entry.
- Fields can be inserted, deleted, moved or renamed, indexed or de-indexed.
- Field types and entry lengths alterable.
- Up to 10 files can be processed in a single batch operation.
- Automatic drive checking to allow mixed use of 40/80 track drives and 31/62 entry catalogs.
- Mixed use of disks for DATAMINDER and user files.
- Runs with system program disk resident or separate.
- Suitable for the BBC Model B Microcomputer with Operating Systems 1.2 onwards and either the Acorn, Watford or UDM/Microware Disk Filing Systems.

Dataminder is sophisticated in capability and simple in use. Whether you want to use it in your business for client files, stock entries, invoicing, personnel, subscriptions etc. or in your home for catalogues, invitations, recipes etc. you won't find a better system than the Dataminder.

The package includes a comprehensive two part manual, introducing you to the system so you can start immediately, and then giving all the technical and detailed information you could need.

EVER INCREASING CIRCLES

Mike Williams' fast-acting programs will make your head spin — and not a trigonometric function in sight

READERS have expressed an interest in the machine coding of trigonometric functions (Letters, May 1984). In drawing circles, for example, the obvious method involves the use of sines or cosines and these calculations are undoubtedly tricky in machine code. In this article I describe a machine code program that draws circles in any graphics mode. It's not all that speedy (although certainly quicker than Basic) and for speed freaks there

is a really fast version of the program which works only in mode 1 and uses direct screen addressing.

Now, how can we avoid trigonometry? Listing 1 gives a Basic program which draws well-formed circles, but look carefully at it. Not a trigonometric function in sight, and perhaps more importantly, the only arithmetic involved is addition, subtraction and doubling, and these operations are easy to do in machine code. So translating the Basic

program into machine code is not very difficult.

Before showing you how it can be done, a few words about the circle-drawing method. Mathematicians tell me it involves what is known as a potential function. I don't pretend to a full understanding of how that works, but it goes something like this.

Suppose we start plotting a circle (figure 1) at the three o'clock position and move clockwise. The co-ordinates

NOVACAD

Computer Aided Draughting for the BBC Micro

New from Technomatic – a CAD package with facilities which until now were confined to mainframe or mini computers. But at a price everyone can afford. Whether you want to design a complex electronic circuit diagram or plan your new kitchen or simply draw a cube NOVACAD will help you do it better and more easily.

All you need is a BBC Micro Model B fitted with an Acorn DFS system and a disc drive.

If you have a 6502 2nd processor and a dual disc drive system then NOVACAD's capabilities are further enhanced.

MAIN FEATURES

- * Very user friendly with all controls and commands from the keyboard.
- * Special windowing techniques make available to the user almost one million dots allowing a lot more details to be put on the drawing than one would normally expect the BBC to be capable of. (Mode O screen displays only 1/6 the number of dots). The drawing can be 4 screens across and 5 screens up.
- * Libraries of user defined shapes such as electronic symbols can be created easily and edited even in the middle of drawing another diagram. Even whole sections of diagrams can be defined as shapes.
- * Shapes can be called by name from a library into any part of the diagram and can be moved, enlarged, reduced, rotated in 90° steps and have mirror images made before being finally positioned.
- * A zoom facility allows the user to magnify any section of a drawing by up to 50 times to make it easier to insert details.
- * User definable grid helps the user set his own scaling for the drawings.
- * Upto 8 'levels' can be used to produce multi layer drawings, and then user can decide which levels are to be displayed. This can be particularly useful in pcb drawings, architectural drawings with details of the services behind the walls displayed only when required and many other such applications.
- * Text can be added at any position vertically or horizontally.
- * Powerful delete facilities allow deletion of single lines or whole sections with minimum of key presses.
- * Printer dump for Epson compatible printers incorporated in the software which allows a full or a sectional screen dump.
- * An optional plotter utility will allow output to a range of popular plotters for high quality diagrams.

NOVACAD will prove to be an invaluable teaching aid in technical schools and colleges and for anyone involved in draughting it will be an ideal labour saving tool.

The NOVACAD package comes with a 16K ROM, Utility disc and a comprehensive manual. All for only £79 + £2 p&p + VAT.

of the first point are $(R,0)$, taking the centre of the circle as $(0,0)$. The next point must have a Y co-ordinate one less (-1) , but whether the X should be one less depends upon the radius of the circle and the screen resolution. Thus the co-ordinates of the next point are either $(R, -1)$ or $(R-1, -1)$. The potential function (the 'T' of the program) decides whether or not X should decrease (line 420). Because of the symmetry of the circle we only need to work out one eighth of it and lines 320-390 plot the eight points.

Listing 2 shows my first attempt at converting the Basic program into machine code. The most obvious way to translate Basic plot statements is to use the VDU commands via OSWRCH, but there is a speed penalty to be paid for such simplicity. If you are a beginner in machine code you might find it instructive to compare the Basic program with the machine code version. The code assembles at &1200 but you can choose any location which gives you about 500 bytes free.

Once assembled, a circle can be produced by the command:

CALLcircle xcenter, ycenter, radius

When calling the circle routine we need to pass parameters, namely the centre of the circle and its radius. I used the method lucidly described by Tony

Figure 1. How the potential function works in this method of plotting a circle

in the machine code version. One is used when fetching the parameters from the block at &600. Subroutine 'abs' is used as the equivalent of the Basic ABS(variable) syntax. The actual plotting is done by the equivalent of PLOT 69 commands in the subroutine 'plot' at line 1910. It's easily modified to plot dotted circles or whatever by changing line 2270.

If you successfully enter the program and run it, you'll be rewarded by the sight of coloured circles 'appearing somewhat faster than in the original Basic program. The routine works in any graphics mode, and because it's working through OSWRCH it won't overwrite anything it shouldn't. But it was not fast enough for me! To have really fast plotting routines some 'naughty but nice' direct screen addressing would have to be done.

A third program, not listed on the yellow pages but to be found on the monthly listings cassette and in our barcode booklet, describes a really fast machine code circle-plotting routine which should satisfy the high-speed freaks among you. It is again based on the same circle drawing algorithm, the difference being in the actual plotting of the points. The 'plot' routine has to convert the co-ordinates into screen addresses. To do this I used a very fast

and compact routine written by Jeremy San, and I'm grateful for his permission to use it.

The other factor leading to a greater complexity in the code is the need to check that 'poking' does not take place off the screen and also to avoid wrap-around of circles near the edge. My coding was the result of trial and error, and you may well be able to improve it.

There is a price to pay – now we have speed we're restricted to mode 1. In other modes the address calculations and pixel table would need modification, and because of their geometry we would only get ellipses, but if you like mode 1, very fast circles can be yours.

Finally, if you enjoy experimentation, try changing some of the steps in the potential function calculations. For example, in lines 670 or 1750: 670 LDA #0 gives diamonds instead of circles, 670 LDA #128 gives squares, 1750 DEC Xinc: DEC Xinc gives another shape.

You might like to modify the program so that it can be asked to produce circles, squares or whatever at will.

Have fun!

Mike Williams' two circle programs are listed on yellow pages 100-101

Basic	Machine code
230-240	490-510
250	520
260	2270 inserts 19,69 into VDU table
290	590-630
300	640-670
310	680-750
320	770-910
330	930-1000
340	1020-1090
350	1110-1180
360	1190-1330
370	1340-1410
380	1430-1500
390	1510-1580

410	1630
420	1640-1730
430	1750-1780
1800	440

Table 1. How the Basic program lines correspond to those of machine code

Shaw and John Ferguson (in *Acorn User*, April 1983) showing how to machine code a square drawing command. The code from lines 330 to 470 picks up the values from the parameter block and stores them for later.

The rest of the source code follows the Basic program very closely, and table 1 shows the corresponding lines. There are three additional subroutines

THE FASTEST WAY TO GET THE BEST PROGRAMS

Software Supermarket is a very different kind of software shop. First, we actually play all the programs ourselves - and choose just the best to offer you. Second, we send FREE with your order our unique 32-page catalogue of the best programs - which quotes all the reviews and even lists load times! (For a catalogue only, send £1 cash and we will send you a voucher for £1 off any order - plus your catalogue.) Third, **WE ALWAYS TRY TO SEND OUT YOUR PROGRAMS ON THE SAME DAY WE GET YOUR ORDER.** UK prices include VAT. Export prices are the same (plus p&p). To order by VISA/ACCESS call 01-789 8546 at any time, 24 hrs a day. We're not the cheapest, but our customers in over 40 countries tell us we're the fastest - and we only sell the best.

ELITE "The game of 1984 and very probably of 1985 as well. No other game comes anywhere near it for complexity, quality of graphics and speed. It is also one of the first arcade games to make use of the disk. The graphics are out of this world and the speed is truly stunning." (Acorn User). "The most amazing and addictive game to appear yet for the BBC, indeed for any computer" (PersCompNews). "BBC owners how have a game unrivalled on any micro" (PCGames). Everything you've heard about ELITE is an understatement. At press time (Dec '84) Acornsoft keep running out of stock. We'll send them as fast as we can get them. NO STICK. ACORN SOFT. **CASSETTE £14.95 DISK (single-sided 40T or double-sided 80T only) £17.95**

COMBAT LYNX "Brilliant graphics, outstanding simulation, an excellent game" (ZX Computing). "The graphics are quite different to anything seen before on any micro... hills, valleys and fields move towards you in an astonishingly convincing way" (PCGames). STICK OR KEYS. DURELL. **CASSETTE £8.95**

MINI OFFICE "This has to be one of the very best value-for-money packages I have ever seen" (A&BComputing). "There is so much crammed onto two sides of the tape, it could not be anything but good value" (Acorn Programs). WORD PROCESSOR, DATABASE, SPREAD SHEET, GRAPHICS - all on one tape. Honest. And they work! NO STICK. DATABASE. **CASSETTE £5.95 DISK £7.95**

SYSTEM 15000 "AN ABSOLUTELY WONDERFUL IDEA... ARTIFICIAL HACKING! Hacking has a wonderful appeal... System 15000 closely mimics a vast number of different databases and you have to hack your way around discovering passwords... as different and rewarding as any adventure game" (PopCompWkly). NO STICKS. CRAIG. **CASSETTE £12.95**

MUSIC SYSTEM "It is difficult to imagine a more comprehensive musical program... some of the most attractive and easy-to-use software available for the BBC" (A&BComputing). "The quality of the product is evident throughout... everything worked as it should, smoothly and with a minimum of fuss... full marks for user friendliness, highly commended" (HomeCompWkly). 4 page leaflet takes you on a guided tour and has you watching one of the pre-recorded tunes play or printing out your own version of 'SAILING' within minutes. Clear 76-page manual. (ISLAND LOGIC) **2 CASSETTES £25.95 DISK £24.95**

NEW WORDWISE+ ROM The BBC's most popular word-processing ROM now contains twice as much and has two manuals! 16K ROM. 180-page manual. 56-page manual. Keystrip. Typing tutor (on cassette). Example Text (on cassette). Example programs enabling mail merging, index generation. COMPATIBLE WITH EXISTING WORDWISE FILES. 75 commands. Probably what the world has been waiting for! Easy to install. WORDWISE+ (Computer Concepts) **ROM £56.35. OTHER ROMS AVAILABLE include** **DISK DOCTOR** "If you use disks or write assembler programs, you must have this chip" (HomeCompWkly) **ROM £33.35** **PRINTMASTER** "This 8K chip contains a large number of extremely useful routines, which take the sweat out of linking your BBC Micro to an Epson printer." (WhichMicro) **ROM £33.35**

WHEEL OF FORTUNE "Technically, this game surpasses any I have seen for the BBC" (HomeCompWkly). "Quite simply the best adventure that I have seen for the BBC... the advances in programming that have been made are amazing... the interpreter is very powerful and a real asset... it really is superb!" (Micro Adventurer) EPIC. NO STICK. **CASSETTE £9.95 DISK £11.95**

SABRE WULF "It will be difficult to find a better action adventure." (MicroAdventurer). "Original and difficult enough to warrant a place in anyone's software collection." (PersCompNews). "SABRE WULF HAS GOT THE LOT, varied action, plenty of fun features, excellent graphics and sound" (Sinclair Answers) NOW AVAILABLE FOR YOUR BEEB - YOUR FIRST ULTIMATE GAME. 256 SCREENS OF BEAUTIFUL JUNGLE MAZE TO EXPLORE (ULTIMATE) **CASSETTE £9.95**

SCRABBLE "A magnificent BBC game that can only be described as next to perfect." (HomeCompWkly). "A fabulous program. It allows you to do anything you would do in real SCRABBLE" (Crash). "An impressive program. It simulates a pretty good SCRABBLE player." (PopCompWkly). Real Scrabble, with an 11,000 word vocabulary, for 1 to 4 players. The computer can play as well, if you wish, and you can watch it thinking! (LEISURE GENIUS) **CASSETTE £12.95**

SPRITE SHOP You could soon be designing and building in to your BASIC programs multi-coloured moving SPRITES! 24-page manual, plus SPRITE GENERATOR to design, edit and save sprites. Plus m/code program to control sprite movement. 2 example programs. For implementation in MODE2 graphics. No knowledge of m/code or assembler needed, but you should know the BASIC in the BBC User Guide. (DR. SOFT) **CASSETTE £9.95**

BLOCKBUSTERS The official version of the TV series. Compulsive general knowledge game for 2 players with hundreds of questions and spare sets to be loaded! 73K of program altogether! 9 skill levels. Play the 'Blockbusters' theme and is tolerant of speed-spelling errors! A very involving game and it may even improve your mind! (MACSEN) **CASSETTE £7.95**

MAGIC SWORD Beautiful and tricky for young adventurers. Large 48-page full-colour storybook tells you what happened before your adventure begins. Then you must find the Prince and then help him to rescue the Princess. Move counter, on-screen compass, simple, colourful graphics: good use of sound and music. SAVE. Written by a mother-and-son team! (DATABASE) **CASSETTE £8.95**

3D GRAND PRIX "More demanding than POLE POSITION, requiring greater skill and patience... takes the best features and goes a stage further. The graphics are excellent." (YrComputer). "More like the real thing... the latest and so far greatest in a line of car-racing software... squeezing code into every nook and cranny of the BBC memory map in a superb Mode2 screen... an exciting and lasting game." (SOFTWARE INVASION) **CASSETTE £9.95 DISK £11.95**

GO FOR GRAPHICS

Would you like 16 colour graphics for just 1k of memory? Nigel Beasley shows you the way in mode 7

85

MODE 7 is great for saving memory but it does not have graphics that are easy to manipulate. The following program allows you to have some simple graphic commands, similar to those available in Basic, and works with any operating system on either model A or B BBC micros but is not compatible with the Electron. The program uses the teletext graphics of mode 7 which give a graphics definition of 70 by 70 (how these operate is explained in the *User Guide* on pages 154-158). Colour can also be used; there are seven background and seven foreground colours available, and these can be changed in the middle or at the end of a plotting routine without the loss of the graphics on the screen.

There are three graphics procedures. PROCMOVE (x,y) moves the start position of the next line to position x,y on the screen. PROCPOINT (x,y) plots a single point at position x,y without moving the cursor to this point. PROCDRAW (x,y) draws a line from the current cursor position at x,y to the point x,y as specified in the PROCDRAW statement.

Listing 2 has a demonstration procedure at the beginning to show how all these may be used. You will of course need to enter and save listing 1 first to run this. First the computer is put into mode 7, then PROCINIT is called. This loads in the machine code part of the program and also sets up some stores for access by the machine code routine, and must be called before any of the other routines are used. A foreground and background colour are then set before starting to plot, and one command is used to set both colours:

```
PROCGR ("Foreground colour",
        Background colour")
```

The demonstration routine writes some text on the screen and then draws a

The demonstration program, listing 2, draws a face

face, using the three commands above. It could be used as a teletext title page before loading in the main part of the program.

The letters are produced by moving the cursor to the position on the screen where you want to start them, then drawn using PROCDRAW (x,y), x and y being read from data statements by the PROC routine to save memory.

The face and eyes are circles. X can be calculated using SIN values, COS values give Y and these produce a circle when plotted using PROCPOINT (x,y). The ears, nose and hair are drawn by moving the cursor to their position on the face, then using PROCDRAW (x,y) as for the letters. To plot the teeth and pupils of the eyes use PROCPOINT (x,y), reading x and y from data statements.

The foreground and background colours can be changed during drawing using PROCGR as before. This allows a change of colour mid-way through a graphics routine, while retaining the picture on the screen. If the foreground and background are set as the same colour (eg, 'BLUE', 'BLUE') then the picture will not show up. A change of foreground or background will show what has been drawn.

The machine code routine is written in assembly language and can be put in many places in memory. I find the most convenient one to use is just below the Basic program, ie before PAGE. If you want to change its position simply alter lines 1090 and 1150 in program 2 thus:

```
1090 *LO. "PLOT" (position in hex)
1150 Pixel_plot = &(position in hex)
```

To assemble the machine code, copy out listing 1, leaving out the REM statements if you wish—they are there to help you understand how the program works. At lines 190 and 3260 use the relevant part for your computer, ie if you own a model B use the first part. On running the program, the code will be assembled high up in memory, but when you recall it in your own programs it can be put anywhere, as explained above.

To use the program merge listing 2 with your Basic program and then call the relevant procedures when necessary.

Checking the program

To ensure that you enter the assembler correctly, enter listing 1 but omit the last line for the moment. Run the program, to assemble the machine code then add the following five lines:

```
1 Z%=0
2 FOR NX=&1700 TO &189D
3 Z%=Z%+?NX: NEXT
4 PRINT "CHECKSUM IS :";Z%
5 END
```

Now re-run the program to calculate the checksum. The value returned should be 48185; if it's different recheck the listing. Otherwise delete lines 1 to 5 inclusive, enter the final line and run to save the machine code.

You'll find the listings for Nigel Beasley's mode 7 graphics program and demonstration on yellow pages 102-104

Set yourself on the road to a copy of Wordwise Plus by plotting the shortest route for the lorry in Simon Dally's latest competition

KEEP ON TRUCKING

87

YOU are the transport manager of a company based in Birmingham, and your task is to collect and bring back to your warehouse a container from each of the following cities: Blackpool, Bristol, Cardiff, Coventry, Edinburgh, Ipswich, Leeds, Liverpool, London, Manchester, Newcastle, Plymouth, Portsmouth, Southampton and Swansea. Only one of your lorries is working at present and it can carry a maximum of six containers.

Which trips do you make to fulfil your contract and at the same time ensure minimum mileage, using the mileage table shown here as your guide? Please specify the routes you take and the total mileage covered.

Answers on a postcard please, to March Competition, Acorn User, 68 Long Acre, London WC2E 9JH to arrive not later than April 4, 1985.

The first three correct entries out of the hat will win a *Wordwise Plus* word-processing package from Computer Concepts, worth £56.35. The package contains a 16k ROM; reference manual; introductory manual; keystrip; a typing tutor program and example text, both on cassette; and example programs.

NOVEMBER

WINNERS

NOVEMBER's competition attracted about 300 entries, nearly all correct. The arithmetic, of course, was all hexadecimal, with the solution A=2, B=8, C=E, D=5, E=7, I=C, K=D, M=4, N=A, O=1, P=9, R=B, S=6, T=F, U=3, Y=0. Thus the result of the addition sum - 'COMPUTER' - was E1493F7B. The five lucky winners of a computer trolley from Paul Gallini Enterprises were K Scuse of Chelmsford, Sandra Evans of Slough, Iain Gallagher of Lytham St Annes, Bob Tinley of Coventry and Nigel Brumpton of Newark.

SANYO SYSTEMS INCLUDE
FREE HIGH RES GREEN
MONITOR

WORD PROCESSING

COMPLETE SYSTEMS FROM £650 + VAT

BBC 1: BBC Micro Model B, View (or Wordwise) Wordprocessor, Quendata 20 CPS Daisywheel Printer, High Res Green Monitor, Cassette Recorder plus 10 cassettes and all the necessary cables £650 + VAT = £747.50

BBC 2: BBC Micro Model B + Disk Interface, View (or Wordwise) Wordprocessor, 100K Disk Drive, High Res Green Monitor, Quendata 20 CPS Daisywheel Printer, 1 Box of Disks and all the necessary cables £799 + VAT = £918.85

BBC 3: Same as System BBC2 but with 400K Drive £875 + VAT = £1006.25

BBC 4: Same as System BBC 2 but with 400K Drive and JUKI 6100 Daisywheel Printer £975 + VAT = £1121.25

BBC 5: BBC Model B + Disk Interface, View (or Wordwise) Wordprocessor, 800K Dual Disk Drive (Mitsubishi), High Res Green Monitor, JUKI 6100 Daisywheel Printer, 1 Box (10) of 80 Track DS discs and all necessary cables £1145 + VAT = £1316.75

SAN 1: Sanyo MBC 550 Series 16 Bit Microcomputer, 128K Ram, Dual 160K Drives (2 x 160K), High Res Graphics (600 x 200 pixels in 8 colours), JUKI 6100 Daisywheel Printer, High Res Green Monitor, 1 Box of 10 discs, Wordstar Wordprocessor, Calcstar spreadsheet and all the necessary cables £1175 + VAT = £1351.25

SAN 2: Same as SAN 1 but with Dual 360K Drives (2 x 360K) £1345 + VAT = £1546.75

SAN 3: Same as SAN 1 but with Dual 720K Drives £1395 + VAT = £1604.25

SAN 4: Sanyo MBC 555 Series 16 Bit Microcomputer, 128K Ram, Dual 160K Drives (2 x 160K), High Res Graphics (600 x 200 pixels in 8 colours), JUKI 6100 Daisywheel Printer, High Res Green Monitor, 1 Box of 10 discs, Wordstar, Wordprocessor, Calcstar spreadsheet, Mailmerge, Spellstar (dictionary), Datastar (database), Reportstar plus all the necessary cables £1295 + VAT = £1489.25

SAN 5: Same as SAN 4 but with Dual 360K Drives £1475 + VAT = £1696.25

SAN 6: Same as SAN 4 but with Dual 730K Drives £1525 + VAT = £1753.75

If you require High Res Colour Monitor instead of High Res Green Monitor in Sanyo Systems please add £320 + VAT = £368 to the above prices.

*128K RAM Upgrade for all above Sanyo systems (makes a total of 256K RAM) £150 + VAT = £172.50 including fitting.

Any improvement on Britain's No.1 word processing ROM...

WORDWISE was the very first ROM based product to be made available for the BBC computer and over the last couple of years it has become the most popular word processing system for the BBC machine with almost 50,000 chips now sold.

It has consistently received excellent reviews for its ease of use and speed. It takes only minutes for the user to become familiar with a powerful professional word processing system.

WORDWISE PLUS is now available extending

the original program in many unique directions. Not only is the program now twice the size but the package includes two completely new manuals—an introductory manual that gently introduces the newcomer to word processing with WORDWISE, and a reference manual listing all the commands.

THE WORDWISE PLUS PACKAGE CONTAINS

- 1 16K ROM
- 2 SPIRAL BOUND REFERENCE MANUAL (180 pages)
- 3 INTRODUCTORY MANUAL (56 pages)
- 4 KEYSTRIP
- 5 TYPING TUTOR PROGRAM (On cassette)
- 6 EXAMPLE TEXT (On cassette)
- 7 EXAMPLE PROGRAMS enabling mail merging, index generation, etc.

WORDWISE PLUS is completely compatible with all older versions and is able to use existing WORDWISE files without modification.

WORDWISE PLUS FEATURES

Over the last couple of years we have received countless suggestions for ways of extending or adding new facilities to WORDWISE. It soon became obvious that we would not be able to implement every single suggestion. Indeed, each person uses a word processor in a different way—each individual has differing requirements—a feature that one person may think essential another may have no need for.

We have overcome this problem in two ways. Firstly we have included the most commonly requested additions and improvements. A number of new editing features and a few more embedded commands have been added.

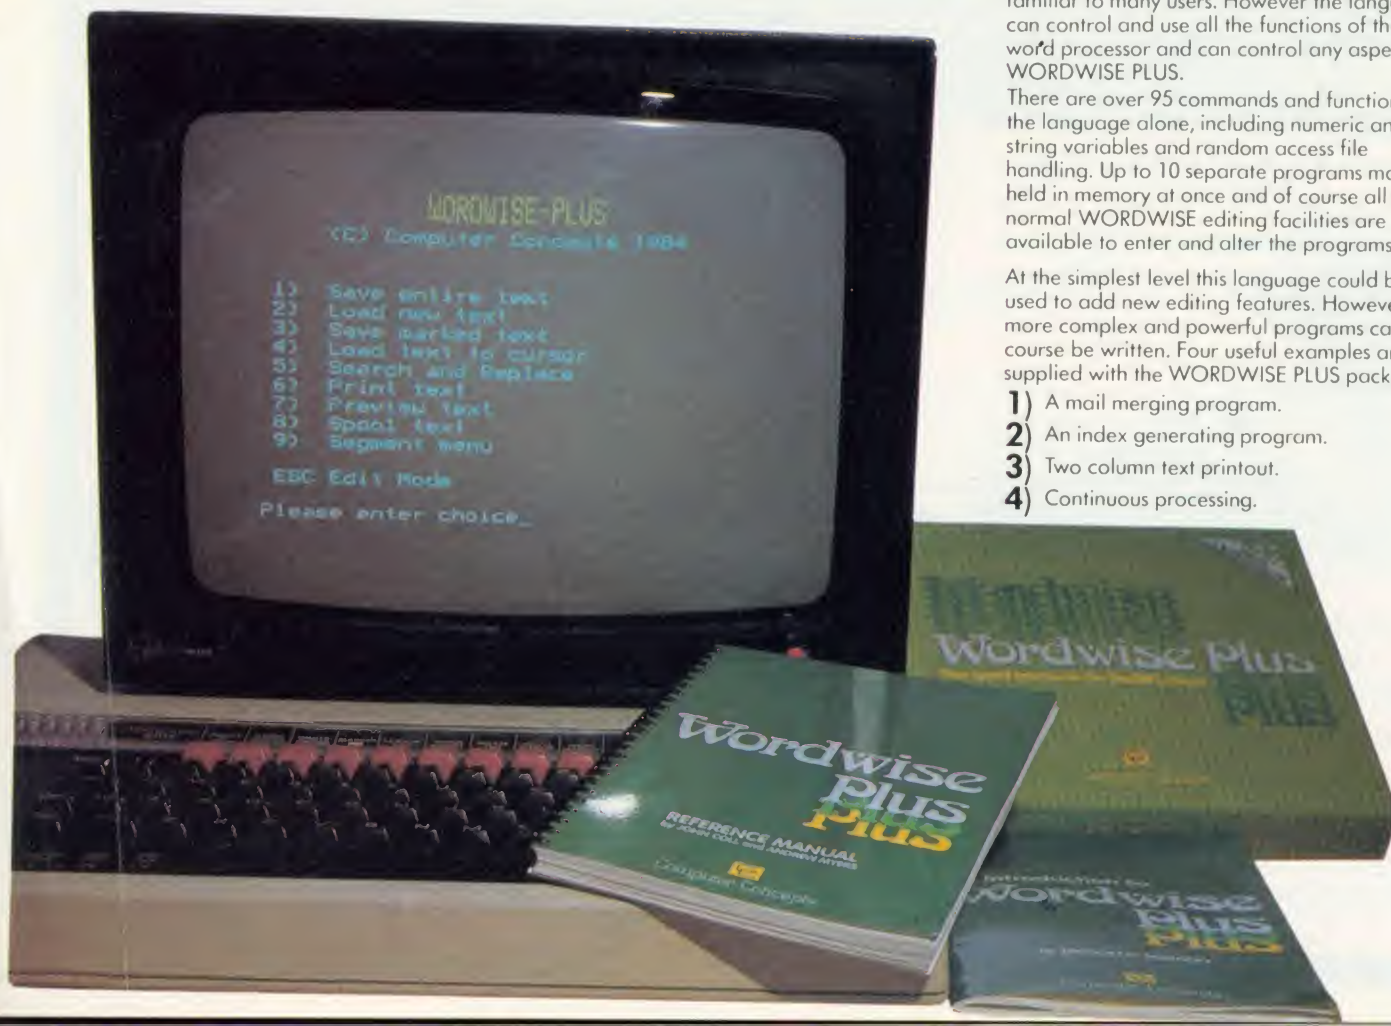

Secondly a unique BASIC-like programming language has been incorporated. This facility enables the capabilities of this word processor to be extended in an infinite number of ways.

The language itself has been designed, like WORDWISE, to be simple to use and understand. Many of the commands look and act like BASIC commands and so will be familiar to many users. However the language can control and use all the functions of the word processor and can control any aspect of WORDWISE PLUS.

There are over 95 commands and functions in the language alone, including numeric and string variables and random access file handling. Up to 10 separate programs may be held in memory at once and of course all the normal WORDWISE editing facilities are available to enter and alter the programs.

At the simplest level this language could be used to add new editing features. However more complex and powerful programs can of course be written. Four useful examples are supplied with the WORDWISE PLUS package.

- 1) A mail merging program.
- 2) An index generating program.
- 3) Two column text printout.
- 4) Continuous processing.

...Must Be A Plus

Word Processing With Wordwise

All the advantages of a ROM—instantly available. One command and your BBC machine becomes a powerful word processing system.

Fast and very simple to use.

The more complex commands are menu driven, enabling those totally unfamiliar with this software to use these more powerful features straightaway.

The function keys are used to full effect with a keystrip clearly showing each function.

Block copies and moves. It is possible to mark any part of your text, this marked section may be instantly moved or copied to any other part of your text. This cut and paste type of operation is a vital part of all word processing operations and with WORDWISE it is simplicity itself.

Automatic headings, footings and page numbering. When printing a document many pages long it is possible to have WORDWISE number the pages for you and put any heading or footing line on each page.

Unique word counting feature. Ideal for journalists, it constantly displays the current number of words typed. It also allows word counting for specific sections of a document.

Works with all filing systems, such as DISC., CASSETTE., and the new ADFS. Works with any printer that works with the BBC machine (most do) and is able to access the special features of any printer (italic, subscripts, etc.). There is no need to buy additional printer driver programs.

Here are a few of the things that have been said about WORDWISE.

"WORDWISE offers an extremely user friendly program . . . it would make an excellent choice for someone rather apprehensive about word processing."

... E & CM

"WORDWISE has won a devoted fan club because of its flexibility and ease of use."

... Practical Computing

"On the whole WORDWISE is an excellent wordprocessor . . . WORDWISE is thoroughly recommended."

... VIEWFAX 258

"WORDWISE is straightforward, friendly and excellent value."

... Practical Computing

"... it is ideal for the home hobbyist and small businessman."

... A & B Computing

Word Processing with Wordwise Plus

WORDWISE PLUS still has WORDWISE as its core therefore it is still very user friendly and retains all the features that made WORDWISE the most popular word processor. It now has many new additions making this the most flexible word processor yet.

WORDWISE will continue to be sold alongside WORDWISE PLUS. For those more specialised users who require the added flexibility here are a few of the new features.

Segments

When using WORDWISE PLUS, the BBC's memory is divided between your text and up to 10 'segments'. Each segment may contain either a program or just normal text. It is therefore possible to store and edit up to 11 separate documents in memory, or 1 document and 10 programs, or any mixture.

Often when writing letters or articles it is useful to keep a notepad, outlining what you intend to write. In WORDWISE PLUS one of the segments could be reserved for an electronic notepad. It would be a simple matter to switch your 'notepad' and your main document with just a single key press.

Some of the New Editing, Embedded Commands and Wordwise Extensions

WORDWISE PLUS works with the 6502 2nd processor. This allows more text to be stored in memory and 80 column previewing no matter how full memory is.

New embedded command FI will fully indent text against the right margin.

New commands for underlining and bold printing. The bold and underline effects are shown on screen—and it is a simple matter to configure these features for any printer.

Saving and loading of text is now up to 10 times faster on disc, and now the computer gives the user a warning if a document is going to be overwritten on the disc or in memory.

There is now a working filename—i.e. WORDWISE remembers the name of the current document being worked on.

New command deletes markers automatically.

It is now possible to print or preview a file directly from disc without having to load it first.

New embedded command 'PS' allows strings to be inserted into the text when it is printed.

New embedded command 'PF' will read a document from file when printing and interpret any embedded command in that file.

Improved search and replace facilities now include wild-cards.

Example Programs Supplied With Wordwise Plus

- 1) A mail merging program that allows names and addresses to be added to a standard letter. This is a relatively easy job with this language.
- 2) An index generating program. This finds keywords and generates a separate index listing the word and the page numbers where the keywords occurred.
- 3) Two column printout. This program will print your text in two columns across the page.
- 4) Continuous processing. This enables the disc user to process and edit extremely large documents spread over several files as if it were one continuous document in memory.

Upgrades

WORDWISE PLUS for only £17+VAT

Existing users of WORDWISE can upgrade to WORDWISE PLUS for £17+VAT (£19.55). We are only able to offer this service through

ourselves at the address below. Please return the old WORDWISE package complete with chip (suitably protected for postage) and the manual with your cheque or P.O. or quote your Access or Barclaycard number. We will then send you the complete new package.

In The Near Future

HI-WORDWISE for 2nd processors that allows even more user memory, supplied on disc for less than £5 to WORDWISE PLUS owner.

A FAST SPELLING CHECKING PROGRAM.

Both WORDWISE and WORDWISE PLUS are available from all good computer dealers. Alternatively you can obtain these directly from Computer Concepts.

WORDWISE PLUS £49+VAT (£56.35)

WORDWISE £39+VAT (£44.85)

Raleigh report. Setting up your own teletext database. Second processors examined. Education: news, activity board revisited. Reviews: 6 wordprocessors compared, three astronomy packs, software for lightpens.

SOLD OUT

Four issues of Acorn User are not available – July 1982, February, March and April 1983. Photocopies of articles are available at 18p a page (minimum charge 50p, inclusive of postage). Orders should be addressed to AU Photocopies, Redwood Publishing, 68 Long Acre, London WC2E 9JH. Figure in brackets indicate the number of pages for each article.

HOW TO ORDER

Fill in the order form on page 96 and send with your cheque or postal order for £1.25 per issue (made payable to Redwood Publishing) to Acorn User Services, PHS Mailing Ltd, PO Box 14, Horley, Surrey.

EIGHT of the GREATEST

During 1984 thousands of readers have played the Acorn User software games **Swordmaster** and **Trek**. Now we have expanded the range with six more tremendous games on cassette and disc. Every one is an absolute winner and, of course, great value. Give yourself a present this year, with the best wishes of Acorn User.

Produced, developed and tested by Micrograf

VAMPIRE CASTLE

Make sure you play this adventure with the lights on. It plunges you into spine-chilling reality, where you can almost smell the dank odours and feel the terror around every corner. Eyes peer at you through the gloom and all manner of creature awaits your slightest error. Try to find and destroy Dracula, but *remember there are fates worse than death.*

The game, written by Andy Mitchell, includes suitably eerie music and surprise graphics, and we accept no responsibility for heart attacks suffered as a result.

'A gem of an adventure' - PCN

£6.95 Cassette
£9.95 Disc (40/80)

FLINT'S GOLD

If you suffer from sea sickness, scurvy or beri-beri this game will either kill or cure. It's a swash-buckling adventure that may be the experience of a lifetime - if you can survive long enough. In your search for the legendary Flint's Gold you will sail the Spanish Main to a land of blood-thirsty pirates, and you may never return.

The sound of crashing surf, the cry of seagulls, and the accompanying sea shanty are so realistic that you can almost taste the salty air.

'It's a far better story than the Hobbit' - Micro User

£6.95 Cassette
£9.95 Disc (40/80)

TREK

TREK was the first game to take advantage of voice synthesis on the BBC micro - and uses joystick or keyboard.

Trek puts you in charge of a Starship with the task of wiping out an alien fleet. It's an excellent adaptation of the classic game with 7 screen displays, 3 on-board computers and 2 weapon systems.

Versions have been written for BBC micro and Electron to use both machines to their full. The BBC tape uses voice synthesis (if the chips are fitted).

The game has been extensively developed from Tim Heaton's famous Trek III. It barely fits into 32K.

£7.95 Cassette
£10.95 Disc

SWORD MASTER

SWORD MASTER is one of the few two-player games around, and is designed for joystick or keyboard.

Sword Master by Ken Worrall is based on the fencing rules written in 1190 by Herman von Salza for the Deutscher Order of Teutonic Knights. It features full-colour machine code animation of a sword duel between two knights.

'A quality game with high class graphics ... one of the most enjoyable games I have played' - Home Computing Weekly, June

'Swordmaster is an immensely entertaining game with excellent graphics and animation' - Personal Computer Games, June

'Swordmaster is a unique game ... one of the few two-player games that makes more than a token gesture towards truly interrelated action' - PCN, June

£7.95 Cassette
£10.95 Disc

COMPENDIUM

A tremendous-value compendium of the three most popular Acorn User games.

HEXANGLE demands the utmost concentration. You and the micro take turns in drawing lines between the six points of a hexangle, avoiding at all costs completing a triangle while at the same time forcing the computer to do so.

In MEGA MONSTERS you are confronted by waves of aliens. While avoiding these and many other obstacles you have to rescue the stranded mutants. It gets more difficult with each phase until finally you face the Monster himself.

VAMPIRE is a two-player action game in which good battles with evil. Each player has an equal number of souls in his care, represented by tombstones or crosses. During each period of day or night one player has the chance to recover or capture souls from the other. The winner is the one to recover all the souls.

£7.95 Cassette
£10.95 Disc (40/80)

CORPUSCLE

In this superb machine code action game by Ken Worrall you assume control of the body's defences, journeying into the three-dimensional labyrinth of the human arterial system. Invading colonies of bacteria advance relentlessly and you must destroy as many as you can. If you fail to keep the bacteria count low they attack individual organs. You must then frantically follow the network of arteries to reach the site of infection. Too many critical areas and you die.

You don't need to know a great deal about the body to begin with - a map is provided. But we guarantee you'll know a lot more when you've finished. It's a unique adventure, truly educational and great fun.

£7.95 Cassette
£10.95 Disc (40/80)

HACKER 2000

In the year 2000 only two classes survive, Programmers and Proles. As a Prole, your only escape from a life of drudgery is to 'hack' your way into the massive Multivax complex in order to change your Brain Scan Report and obtain money to bribe the Thought Police.

You may gain vital information with the assistance of the Duty Android in a tour of the complex. If you manage this, you're on your own. From here on you start to appreciate the originality of the game in its representation of a real-time system. You'll need all your powers of logic and some lateral thinking to use the information you glean to 'hack' through the Multivax systems. Your goal can be reached in an unlimited variety of sequences.

£7.95 Cassette
£10.95 Disc (40/80)

TRAINS

This classic game by Peter Balch requires quick wits and clear thinking. Your aim is to manoeuvre a number of trains around a complex network of track, as you pick up fare-paying passengers and deliver them to their destinations. All the time your valuable stocks of coal are dwindling. If you succeed, you have even more trains to control and more passengers to collect. And as if this were not enough to cope with, you are confronted by the Demon train over which you have no control.

The game has excellent graphics and will keep you on your toes. See how profitably you can run a railway.

£7.95 Cassette
£10.95 Disc (40/80)

PLUS

ARTICLE LISTINGS ON CASSETTE

Yes, at last, the tape you've been crying out for! Save the wear on your fingers by sending for one of our cassettes giving all the major listings in this issue. Each cassette costs £3.75 (inclusive) for the Electron and BBC micro. This includes a menu and disc transfer routine to help you find your way around - and use on your own programs. The tapes come with BBC programs on one side and Electron programs as the other, so it shouldn't be possible to mix the two.

Please answer these questions to help us improve your magazine.

- Do you use your micro for?:
☐ school ☐ business ☐ hobby
- Do you have, or intend to buy, any of the following?:
☐ monitor ☐ disc drive ☐ second processor
☐ printer ☐ modem
- How many software packages do you think you will buy in the next 12 months?:
☐ 0-5 ☐ 6-10 ☐ 10 or more

- ☐ I enclose my cheque/postal order/sterling bank draft payable to Redwood Publishing for £.....
- ☐ Please debit my Access/American Express/Barclaycard

Account no.

Mike Williams has also written an extra-quick machine code program to draw circles, based on the same algorithm. It can be found on both our monthly listings cassette for March (see page 96 for the order form) and in bar code format in our bar code listings booklet (see page 108 for details).

See 'Go for Graphics', page 85

MONTHLY LISTINGS CASSETTES AND BARCODE BOOKLETS

IF KEYING in all these listings gets you down and your fingers in a tangle why not send off for our monthly listings cassette? It contains all the major programs in this issue and costs £3.75 including postage and packing. You'll find the details about the cassette on page 95 and the order form on page 96.

Better still, be the envy of your friends and buy a barcode reader (see our offer on page 113). All the listings in these yellow pages are reproduced in bar code format - send a cheque or postal order for £1 plus an A4-sized stamped addressed envelope to Bar Code Listings, Acorn User, 68 Long Acre, London WC2E 9JH.

ACORN USER
PROGRAM LISTINGS
FOR THE
DECEMBER 84 ISSUE

ACORN USER
PROGRAM LISTINGS
for the
JANUARY 85 ISSUE

ACORN USER
PROGRAM LISTINGS
for the
FEBRUARY 85 ISSUE

IF KEYING in all these listings gets you down and your fingers in a tangle why not send off for our monthly listings cassette? It contains all the major programs in this issue and costs £3.75 including postage and packing. You'll find the details about the cassette on page 95 and the order form on page 96.

Better still, be the envy of your friends and buy a bar-code reader (see our offer on page 113). All the listings in these yellow pages are reproduced in bar code format—send a cheque or postal order for £1 plus an A4 sized stamped addressed envelope to Bar Code Listings, Acorn User, 68 Long Acre, London WC2E 9JH.

BAR CODE OFFER

KEEP UP WITH THE KIDS IN SCHOOL

113

BAR CODES will revolutionise the way we use computers in applications as well as the way we load data. Here is the chance to get experience of this important development by ordering the Addison Wesley/MEP Bar Code Teaching Pack (see our January issue, page 129) direct through *Acorn User*.

These bar code readers are being offered to schools first and versions will not be available to the public in the shops until later in the year – when they will certainly cost more. However, because of its active involvement in the scheme *Acorn User* is able to offer the Teaching Packs direct to readers at the introductory price of £49.95 plus £2.95 post and packing (plus VAT).

Acorn User will be printing some listings in bar code format in each issue and making booklets of bar codes available by mail order. Book publishers are already printing listings in bar code format, in fact Bruce Smith's latest book *The BBC Micro Machine Code Portfolio* has 13 pages of bar code listings.

So, to stay ahead of the latest development in computers and education, send off for a pack from *Acorn User* today. See page 112 for offer of magazine listings in bar code format.

The pack includes:

- ★bar code reader
- ★explanatory booklet written by *Acorn User* author George Hill
- ★software to print bar codes
- ★music program by Joe Telford
- ★bar code stencil
- ★disc or cassette of utility software

Note to disc users: the disc supplied is 40 track – however, if you order the cassette, there are instructions on how to transfer the software to 40 or 80 track discs.

Please state disc or cassette version.

All for £60.84 including VAT and £2.95 postage, (£52.90 excluding VAT). Make your cheque payable to Redwood Publishing, fill in the form below and send it to Bar Code Offer, Redwood Publishing, 68 Long Acre, London WC2E 9JH.

Please send me Bar Code Reader Teaching Packs* (£60.84 each inclusive)

CHASE DATA

NEW

PRODUCT LAUNCH

SPECIFICALLY
ENHANCED FOR USE
WITH THE
BBC MICRO.

Canon 221A "Super-Slim"
(33.5mm) 80 track double
sided 400K floppy disc drive
(40/80 track switching).

Continuing our policy of securing premium
quality products at budget prices we are
pleased to announce the new generation
Canon 221A drive.

Specifications:
80 track double sided disc drive. 40/80
track switching with dual colour LED.
Capacity 400K in single density, operates in
double density. Direct drive, track to track
access 3 ms in 96 TPI mode. Dimensions:-
1/3 standard height, only 33.5mm.

£154 INC.

CANON 6108 2/3 HEIGHT (57.5 mm)
40 TRACK D/SIDED 200K
FLOPPY DISK DRIVE

SPECIAL OFFER

SOLD OUT INC.

Specifications:
40 track double sided disc drive
capacity 200k in single density
Operates in double density
Belt driven
Track to track access time - 12 ms
Full 12 month warranty with optional
extended warranty available

Price Includes:
Drive cased with cables,
manual & utilities disc and
includes VAT, postage &
packing.

All canon 40/80 switchable disc drives feature an on-board dual-colour LED on the front panel to show track mode selected. This is coupled with our own unique two-stage illumination. To give a clear operating status as follows.

40 TRACK MODE:	_____	LED GREEN
80 TRACK MODE:	_____	LED RED
POWER ON:	_____	HALF-ILLUMINATION (GREEN OR RED)
DRIVE SELECTED:	_____	FULL-ILLUMINATION (GREEN OR RED)

FUJI FLOPPY DISCS

	Per box 10	If purchased with disc drive
40 TK SS DD	£17.60	£15.60
40 TK DS DD	£24.50	£22.50
80 TK DS DD	£28.60	£26.60

These prices include VAT & P & P.

DISCUS

Test utility for testing your own disc drive, at regular intervals to avoid the dreaded flop of your floppy. Menu driven, easy to use, 40 or 80 track versions.

Tests: Motor speed, read/write, steptest, alignment test*, step & read/write test, read only test.

£8.00 inc. £7.00 if purchased with disc drive.

*This test requires an oscilloscope & alignment disc.

SLIM CANON DISC DRIVES:

MODEL: 110. SPECIFICATION OF EACH DRIVE: S/SIDED 40 TRACK 100K.

MODEL: 210. SPECIFICATION OF EACH DRIVE: D/SIDED 40 TRACK 200K. MODEL:

220. D/SIDED 80 TRACK 400K. (40/80 TRACK SWITCHING)

NEW SOFTWARE RELEASE FROM CHASE DATA

Vector 1 -

The ultimate tape to disk utility

Vector 1 allows you to transfer almost all your tape software to disk. Unlike others, you only need to buy 1 copy of Vector 1 since it transfers tapes to specially formatted program discs. This is easily the most powerful tape to disk utility available.

Vector 2 -

Disk to disk utility

Vector 2 allows you to make backup copies of all your valuable disk software. It is the most advanced utility of its kind available. It is a condition of sale that neither of these products are used for infringement of copyright.

Not compatible with double density interface.

Vector 1 **£16** On its own

£15 If purchased with disk drive

Vector 2 **£16** On its own

£15 If purchased with disk drive

SLIM SANYO DISC DRIVES:
MODEL: 596D. SPECIFICATION OF EACH DRIVE: D/SIDED 40/80 TRACK 400K. (40/80 TRACK SWITCHING)

The Sanyo disc drive is a "half-height" 40/80 track switchable unit of standard dimensions, built to Sanyo's usual high standards of quality and reliability.

All inclusive price list: This means: disc drive + case + all power & data cables + UK carriage + utilities disc & manual + VAT.

You answer Bruce Smith's challenge for a program to replace erroneous Is and Os, plus GCOL colour charts and replacing VDU19s with events

116

£20

I & O challenge

is answered

WELL, I was right. I knew someone must have the answer, and Stephen Phelps of Cardiff earns a crisp £20 for his solution to my challenge in December's Beeb Forum. Stephen's program (listing 1, page 105) will substitute all erroneous Is and Os for 1s and Os.

As it stands, the machine code program assembles nicely into page &A of block zero RAM. This location can be changed by altering the value assigned to P% – remember to edit the last line accordingly though.

The program works using events and as such re-vectors the EVENTV at &220. Each time an event occurs a carriage return is sought. If it's found, the event polling routine assumes a line has been entered into a currently developing program. The program at PAGE is then looked at and any variable assignments sought out. Each of these is examined in turn and any erroneous Is replaced by 1s and Os replaced with Os.

To ensure that the program and its operation stay protected, the Break key is programmed with the code address and events enabled with *FX14,2.

To test the program enter (save) and run the listing. Now enter a new program or line such as:

5 X% = IIOO

list the line and what you should see is:

5 X% = 1100

Apart from utilising the Beeb's events the object code needs some zero page bytes in the user area. It also does not work in immediate mode – any ideas?

£15

Replacement events

EVENTS seem to be the order of the day, and Peter Gregory has come up with an interesting way of using them to replace VDU19s in programs. Peter provides the commentary...

One useful trick to produce fast ani-

mation is to switch colours round by using a VDU19 command and some time delays. This technique is very fast and means that the calculations and plotting to produce the relevant graphics are isolated from the animation area. However, the computer has to spend all its time doing VDU19s and so can't get on with other jobs.

My solution is a program which switches the colours round automatically by the use of events (listing 2, page 105). To speed up colour switching (and reduce the complexity of the machine code), OSWORD &0C is used instead of VDU19 as event handling routines must take under 10 milliseconds, but is only available for OS 1.2. The program uses the zero page memory to point to each memory block for each colour switching cycle (2 bytes for each block). Each colour block contains the following data:

- Block: LSB of duration of present colour cycle (in centiseconds).
- Block + 1: MSB of duration of present colour cycle (in centiseconds).
- Block + 2: Colours to be altered (n).
- Block + 3: to Block + n: Physical colours of logical colours 1 to n.

The program also uses zero page locations &F8 and &F9 which are not used by OS 1.2 or other ROMs. These areas of memory may be required by future operating systems or various utility ROMs, in which case the assembly language needs to be altered. The routine also looks at location &360 to find how many colours are available. If the machine code is assembled at &F00 onwards, the relevant routines are:

- &F01–&F04 Test event type. If not due to an internal timer event, exit.
- &F05–&F09 Store A,X,Y registers.

&F0A–&F19 Update colour cycle number.

&F1A–&F23 Get block address from table (&70–&8F) and store at &F8,&F9.

&F24–&F2E Update internal timer to generate event at end of cycle.

&F2F–&F39 Find out how many colours to be altered. Exit if too large for present mode.

&F3A–&F5C Switch colours around.

&F4B–&F54 OSWORD call to alter present logical colour.

&F5C–&F64 Set interval timer to generate an event at end of colour cycle.

&F65–&F6B Restore registers and exit.

&F6C–&F70 Block of memory for OSWORD &0C (VDU19).

&F71–&F75 Block for OSWORD &04 (write to timer). LSW altered by program.

&F76–&F77 Used in colour loop.

&F78 Present cycle number. Updated every event.

&F79 Number of colour cycles. Set by calling program.

To use this program:

●load it into a convenient page of memory, then set up all the cycle blocks in terms of

[Delay Lo] [Delay hi] [Number of colours] [colour 1] [colour 2] [colour n]

●Set up the zero page pointers to point to the relevant blocks.

●?[Start of Code + &78] = Number of colour cycles]

This address might be placed between &39F and &3A6 as this range is not used by OS 1.2. To do this, remove line 360 and insert:

15 number_of_interrupt_driven_colours = [address]

●Set up ?&220 and ?&221 (the event vector) to point to this routine.

Beeb Forum is a platform for ideas, tips and applications relating to the BBC micro and the Electron, intended for experienced programmers to share their thoughts. For every reader's tip published we pay £5 – or more for something special. Contributions should be typed or printed, with substantial listings on cassette. Alastair Carradice's quick reference chart for GCOL colours

- Enable internal timer events by *FX14,5
- Start the ball rolling by calling the start of the machine code or by CALLing OSEVEN (&FFBF) with Y% = 5 to generate an event.

A sample use of this routine is included in the assembly code. To use this, type in the following:

```
MODE2:PROCColours:PROCBLOCK
CALL&FFBF
```

which is not the most useful application of this program, but demonstrates how to use it. The routine only uses all this memory if there are 16 colour cycles. If the number of colour cycles (call this X) is less than X, the vector block uses 2*X bytes of zero page (&F8, &F9). If the background colour (0) is to be altered too, the following two lines need to be changed:

```
200 LDA #&FF
230 LDY marker: DEC colours_to_go:
BPL colour_loop.
```

£5

Quick charts

THE REQUEST for some useful tables has obviously had many of you burning the midnight oil. Most of those received were quick reference charts for GCOL colours using the logical operators, and Alastair Carradice of Seascale gets the vote as his are the clearest.

The tables show the results when a foreground colour, COLOUR1, crosses a background colour, COLOUR0.

THE CARE LOW PROFILE ROM MODULE SYSTEM

For use with
the BBC Micro

Don't run the risk of damaging your ROMS/EPROM or your BBC micro. Whenever you want to remove ROMS/EPROMS from your BBC. Fit our Low Profile Rom Module System and save your collection of ROMS/EPROMS in our specially designed cartridges:

The CARE LOW PROFILE MODULE SYSTEM

Has been designed not to take any power from your BBC Micro and allows you unlimited ROMS/EPROMS.

The CARE LOW PROFILE ROM MODULE SYSTEM gives you the flexibility to plug in any ROM/EPROM for example View - Toolkit - Wordwise etc., without having to reopen your BBC micro every time you want to change your ROM/EPROM.

The CARE LOW PROFILE ROM MODULE SYSTEM

is a ribbon extension connector system fitting into the predestined slot on the left of the BBC keyboard, passing underneath the keyboard and inserted into one of the existing sideways ROM sockets. Once the module system is fitted, you need one CARE ROM CARTRIDGE for every ROM/EPROM.

The CARE LOW PROFILE ROM MODULE SYSTEM has been designed to fit all BBC Micros model B, and will also fit BBC Micros model A which have been upgraded to enable access through predestined slot to sideways ROM sockets.

Each CARE LOW PROFILE ROM MODULE SYSTEM comes neatly packaged in a special presentation case.

THE CARE LOW PROFILE ROM MODULE SYSTEM IS TOTALLY COMPATIBLE WITH THE VIGLEN SYSTEM.

EACH SYSTEM CONTAINS:

- 1 Low profile socket housing
- 1 Cable assembly.
- 1 Rom cartridge.
- 5 Blank Labels.
- 1 Installation instructions.

SECOND KEYBOARD? IT'S AS EASY AS ADC

119

Paul Beverley's simple electronics project, using the analogue port, for a programmable second keyboard

CONTINUING my investigation into the potential uses of the analogue port on the BBC micro, this month I'm going to look at the idea of using it to provide a second keyboard. The hardware is simple and straightforward – it's the software that makes the system flexible. There are a number of different ways to implement the system. I'll look in detail at two particular applications and then suggest how you might alter the software to provide a different configuration.

Why use the ADC?

Regular readers may remember that in the July 1983 issue I looked at how the user port could be used to interface to a second keyboard with 16 keys. The keyboard worked automatically by making use of interrupts and could be programmed to produce any set of 16 characters (or control codes) you wanted. So why do we need another design? And why use the ADC (analogue to digital converter) input?

First, the hardware is much simpler – just a single resistor for each key and a variable resistor. No integrated circuits or printed circuit boards are needed, so it's much easier for the beginner to make and it's much cheaper. Second, it only needs four wires to connect it to the computer rather than a 20-way ribbon cable, and the connector used is also somewhat cheaper. The third reason, and perhaps the most powerful, is that it's extremely versatile. You can have as few or as many keys as you like (within reason!). The keys are programmable in that you can make a key

produce any character you like, and I'm going to look at a way of automatically re-programming the keys without loading in any extra software – you use some of the keys to select the character set you want.

The hardware

If you look at the hardware (figure 1) you'll see that it bears a remarkable resemblance to the diagram on page 127 of last month's issue. The only addition is a variable resistor which gives it some degree of adjustment. The program to run the second keyboard is entirely in machine code and as it would be extremely difficult to adjust the scaling within the software, we need to use a hardware adjustment.

The basic operation of the hardware was explained in last month's article, so I won't repeat it here. However, apart from the addition of the variable resistor, one other change has been made. The value of the bottom resistor in the divider chain has been increased to give a more reliable selection of the key number by the analogue to digital converter. The best value seems to be about 50 per cent more than the others, as shown in the diagram.

Software – the basic principle

The BBC micro makes extensive use of interrupts to deal with some of its inter-

facing hardware such as the main keyboard and the ADC. For example, every time the ADC chip finishes converting the voltage on one of its inputs to a binary number, it generates an interrupt. In other words it tells the processor that it is ready to be 'serviced'. The processor then leaves whatever it was doing, reads the number that has been produced, stores it away in an area of memory and sets the ADC to convert the next channel, or if only one channel is being used, to convert it again. When you use ADVAL in Basic, or its OSBYTE call equivalent in machine code, it doesn't actually read the ADC itself. All the processor does is read the latest value from this area of memory and present it to you.

These ADC interrupts are continuing all the time, performing what we call a background task, and so we can make use of them for our second keyboard. We can program the processor so that every time a conversion is completed, it checks the value, and if it's zero (ie no key is pressed) it does nothing, but if the value is not zero, it calculates a number which gives an indication of the key that has been pressed. It then looks up on a table which character that key represents and puts that character automatically into the keyboard buffer.

While this is happening as a background task, the main program, be it a Basic program or a wordprocessor or whatever, discovers that there is another character in the keyboard buffer. However, it has no way of knowing whether it came from the main keyboard or from the second keyboard.

**See yellow pages 107 to 108
for the listings needed to run
the second keyboard**

Proudly presents

CHESS ANALYSIS SYSTEM (CAS)

CHESS DATABASE for the BBC Model B (OS 1.2)

© 1985 BBC Micro Ltd. 001515 001

- * EASY TO USE structured database.
- * MOVES, VARIATIONS AND COMMENTS in a file.
- * ANY NUMBER OF GAMES in a file.
- * START GAMES from any position.
- * UP TO 2000 MOVES in a file.
- * EDITOR up update files.
- * AUTOMATIC game index.
- * SAVE to tape or disk.

* **MANY REPLAY OPTIONS** include: AUTOMATIC RESET to selected position;
JUMP backwards and forwards in a game; TEST YOURSELF against the data file.

* **LARGE DISPLAY** of board and pieces showing current position.

* **You can use CAS to:** BUILD AND UPDATE your personal opening system; RECORD AND ANALYSE games including POSTAL CHESS games with dates; ANALYSE POSITIONS, e.g. analyse variations on adjourned games. In addition CompuChess provides data files containing instructional and reference material for use with CAS. Many more will follow.

CHESS AUTHORS We are seeking chess material suitable for publication in data files. ALL GOODS DESPATCHED WITHIN FIVE WORKING DAYS. PLEASE SEND ORDER AND CHEQUE/P.O. TO

COMPUCHES, Horndale Avenue, Aycliffe Industrial Estate, Co. Durham DL5 6DR. Tel: (091) 2854325.

Please tick boxes as appropriate

CHESS ANALYSIS SYSTEM 40 track disc ☐ £11.95

80 track disc ☐ £11.95 Please state DFS _____

CHESS ANALYSIS SYSTEM Tape version ☐ £9.95. TAPE TO DISK UPGRADE
Send old tape ☐ £5.00. Printer Dump ☐ £4.50.

Two keyboard programs

Programs used to run the second keyboard must be written in machine code since they have to be part of the background operation of the computer. However, you don't need to understand how they work to be able to type them in and use them.

There are two programs in the listings section which could be used with the keyboard. If you're not too familiar with machine code programming, what each of these programs represents is a source code listing – that is, when you run them, they generate the actual machine code program. Once this machine code program (the 'object code') has been generated, it can be stored separately from the source code. So to use the keyboard on subsequent occasions all you have to do is load in the machine code program from disc or tape – you don't need to re-load the source code each time.

The first program just gives a straightforward output of characters contained in a table in memory. Once the machine code program has been loaded in, you could re-program it from within the main program by changing the table of characters that have been loaded into memory. If you wanted to have different sets of characters available, run the source code a number of times with different character set definitions and save each as a separate machine code program with a different name – 'HEXKEYS', 'NUMKEYS', etc.

The second program provides an alternative way of re-programming the keys. It uses the bottom three keys on the keyboard to select one of three different character sets. These are stored in memory and are available for use without any further programming, so the main program running in the computer would be unaware that any re-programming was going on.

Setting up the keyboard

The hardware as it stands will allow you to use up to 30 keys. If you're using fewer simply add extra resistance at the top of the divider chain so that the adjustment provided by the variable resistor will allow the top key to give the correct key number. If, for example, you wanted to use 16 keys, you could use a 12k fixed resistor in series next to the 5k variable resistor. With 24 keys you might use 3k3.

A facility for checking this adjustment is provided at the start of the program. For example, if your keyboard has 24 keys you would adjust the variable resistor to find the position where the number produced by key number 24 just stopped giving 24 and began to produce the number 25 instead. Then you would find the position where it just

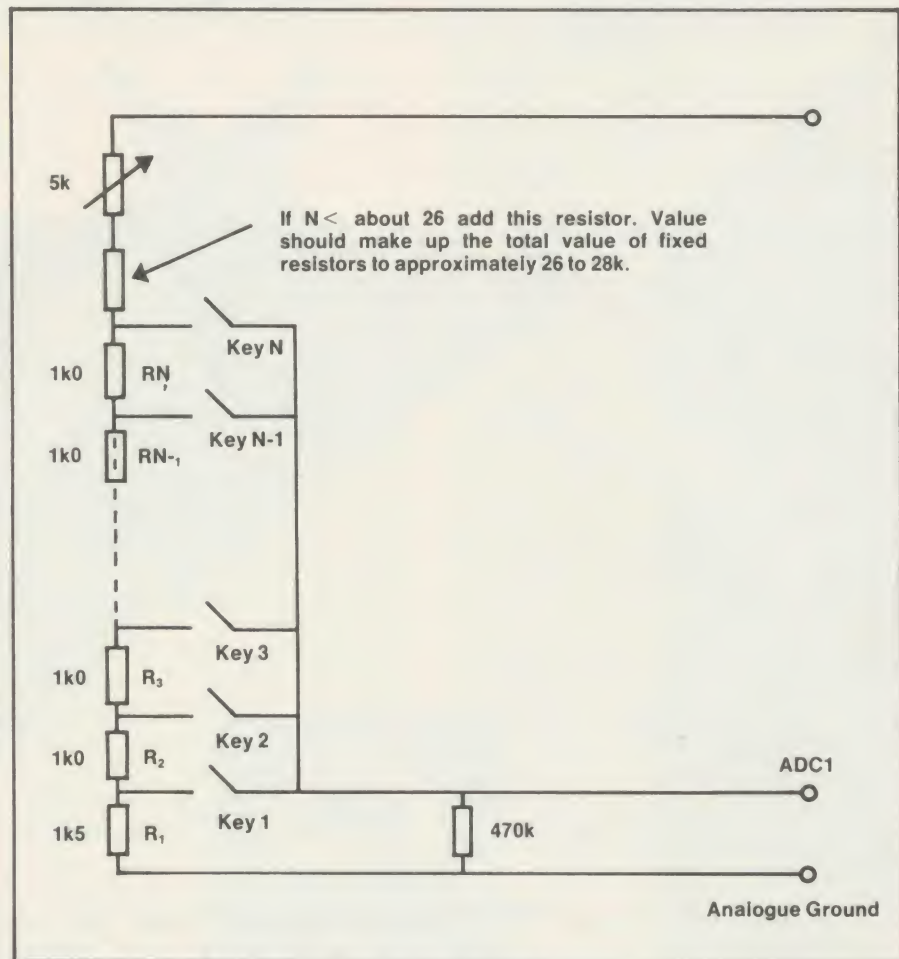

Figure 1. Circuit diagram for the second keyboard.

started producing the number 23, and finally move the control to exactly half way between these two positions.

Type in and run the program in listing 1. It will assemble the keyboard software and set up the table of characters which it is to produce. These are selected at line 770 and can be changed to give whichever characters you want. The program also prints onto the screen the command you need to save the machine code program onto tape or disc. Use the cursor and copy keys to enter the command and press the Return key. If you are using tape type *RUN and press Return when you want to use the keyboard again (or */ which is the abbreviation for *RUN) and start the tape. If you have a disc system, it's just as easy. Type *AKEYS where 'AKEYS' is the name you have given to the machine code program (line 90). The system then loads and runs the software. You could of course change the characters at line 770, run the program again, and save the machine code program under a different name.

Once the machine code program has been loaded in, the keyboard can be enabled or disabled at any time using *FX14,3 and *FX13,3 respectively. We can do this because the machine code

program does not deal directly with the interrupts but deals with them at the level of what are known as 'events', and these events can be enabled and disabled by using *FX commands. *FX14,3 enables the 'ADC conversion complete' event and it is disabled by the *FX13,3 command.

As it stands, the keyboard is automatically enabled as soon as you load in the machine code program or run the program which assembles it. If you would prefer it only to be made ready for use when you issue the *FX14,3 command, then you simply delete lines 240 to 260 (or lines 290 to 310 on the second program).

Using the programmability

With the particular string used in the listing of the first program, the characters produced by the keys will be the letters a to z plus numbers 0 to 3 to make up the 30 characters. Obviously, if you only have, say, 20 keys then you only need 20 characters in that string, and they can be any of the alphanumeric characters you choose. However, apart from the ordinary characters, you can also get the keys to mimic the functions of the Return, Copy, cursor and Delete keys. To program

THREE NEW PROGRAMS FROM MICROTEST

DAIRYFILE FOR DAIRY FARMERS

Keep on that economic line between over and under feeding!

Save time recording milk yield and calculating feed amounts!

Quickly decide feeding policy with the 'Monthly Calving Group' Performance Graph!

Print out a recording sheet with cows in numerical order. Print out graphs or tables of individual cows or Monthly Groups showing serving and pregnancy details, illness record, Calving Index, weekly and running total Margin over Concentrate. See at a glance cows due for serving, pregnancy diagnosis and drying off. Keep track of weekly total feed cost and milk sale price.

All this and more with DAIRYFILE.

Predict cow or Monthly Group total lactation yield. Compare with Standard Lactation Curves. All old data preserved - compare Monthly Groups over the years. Which is the most profitable month?

Find out with DAIRYFILE - for up to 200 lactating cows

£69.00 inc. VAT (disc only) + p&p 50p

2 x 40 Track Drives Required or 1 or more 80 Track Drives. Please state which when ordering.

SATAN'S CHALLENGE or (Nevil Rides Out)

A Black Magic Adventure

Dare you take up the challenge laid down by the most evil and sinister of all beings - the devil himself. If you do you will find yourself alone and at the mercy of the twisted fancies and whims of a cold and calculating mind.

Occult forces are threatening the lives of those near and dear to you. Their only salvation rests in your hands but in accepting the challenge your own existence is put in severe peril.

In taking up the challenge you have to find The TALISMAN and locate a pentagram which then has to be prepared for the final rite. In the meantime dark forces will be opposing you making a difficult task almost impossible.

Do not allow yourself to be lulled into a sense of security for it will be short lived. Many have gone before only to swell the ranks of the damned.

This is the latest adventure from the stables of Microtest and has been written with the acclaimed features of other adventures in mind eg save facility, quick response, simple but extensive commands, a mixture of logical and fiendish problems to solve.

Be warned this is an easy adventure to get into but devilishly difficult to end.

Cassette £7.95 inc. VAT Disc £9.45 inc. VAT + p&p 50p Disc 40 or 80 Track

MICROTEST FONT ROM

This exciting new ROM from Microtest will enable you to get all sorts of new characters and fonts from your BBC Computer. Once you have produced your masterpiece on the screen, all you have to do is use the inbuilt screendump utility to produce a hard copy on to paper.

Typing *HELP FONTS gives you a list of available fonts and the blocks of characters which they replace.

Available fonts are:

- *Accents Accents and miscellaneous
- *Block Small capitals.
- *Data Like the bottoms of cheques.
- *Greek It's all Greek to me too!
- *Joined Standard capitals with joined up lower case.
- *Maths A mix of until now unobtainable Mathematical symbols.
- *Miscellaneous A few oddities which often are very necessary.
- *Thick Thick text (for MODEs 0&3) to enhance 80 column mode.
- *Thin Thin text (for MODEs 2&5) which makes modes 2 & 5 much more readable or perhaps 'READABLE'.
- *Vertical For labelling graphs in a vertical plane
- *Mode 8 10 column multi colour, memory miserly mode.
- *S Dump A Dump facility which will produce a screen dump of any mode from 0 to 8 (including a text only dump in mode 7) on an epson, star, CP80, MT80 or JP80 etc etc.

The dump utility will produce negative or positive product, can magnify, and will also rotate the picture through 90 degrees as well as being able to position the picture anywhere laterally across the paper.

The ROM uses absolutely no user memory and can be used with word processors etc, as well as with normal word programs

New Issue Microtest Starstick & Joystick Package.

announcing the arrival of the new issue 2 + ROM.

Available now the NEW issue 2 + ROM Joystick comes in three forms:
OPTION 1 The Starstick ROM and Quickshot I Joystick

Price £22.85 + £1.00 P&P.

OPTION 2 The Starstick ROM and Quickshot II Joystick

Price £25.50 + £1.00 P&P

OPTION 3 The Starstick ROM and Patch Lead (choose your own Atari/Spectrum style joystick)

Price £20.50 + £1.00 P&P

OPTION 4 Send your old version STARSTICK ROM back to us for reprogramming to issue 2 +

Price £3.50 + £0.50 P&P

VI.4 STARSTICK was 4K the new version has been squashed into 8K.

The NEW ISSUE ROM is compatible with latest* ACORN/SOFT programs as well as REPLICA II.

As with the VI41 issue of ROM you can at last connect good "self centring", "rapid action" joysticks to the BBC Computer via the user port. (Model A owners please note that you do not need the analogue interface fitted to your computer but you will need the user port and IC76).

Pressing any combination of the BREAK key does not affect the STARSTICK software and now by pressing TAB-BREAK REPLICA II is auto booted and is compatible with the STARSTICK ROM V2+.

The software patch provided in the ROM monitors O S. calls and patches the Joystick to the Games programs, and so will work with most games programs even programs not meant to function with Joysticks (except those using illegal direct memory addressing)

The new command summary and description is -

- *STICK enables the ROM.
- *NSTICK disables the ROM
- *SETSTICK program joystick.
- *KSAVE save protocols set by *SETSTICK
- *KLOAD load protocols saved by *KSAVE,
- *MAP remap current keyboard definitions, play games using your favourite keys
- *CLEVER intelligent loading of software (ensuring ACORN compatibility).
- *PLONK relocate area of work memory used
- *PROP1 proportional joystick emulator 1
- *PROP2 proportional joystick emulator 2
- *ANA patches joysticks via the analogue port.

Microtest's microbase own bulletin board is available for use with Prestel modems and software. (0208) 77677. Place your order by Electronic Mail TODAY. (24hr. service). Microtest are giving away prizes to random users.

- *KILL to games.
- *DOUBLE ROM manager, disables troublesome ROMs
- *TAB-BREAK replace up to two joysticks.
- *PAUSE Auto boots REPLICA II
- *NPAUSE define key to freeze game.
- *NAME dissable *PAUSE
- *HELP KEYS predefined key protocols
- *REPEAT display current key protocols
- *NREPEAT enables ROM based auto repeat, dissables *REPEAT

Should a contention state occur when two roms or more try to use the same *command prefixing any of the above with M will help solve the problem

OR ANY GOOD DEALER

DEALER ENQUIRIES
and
EXPORT ORDERS
WELCOME

Large picture shows BBC Computer System and a Quickshot II Joystick. Small inset just a few of the joysticks that will work with the patch lead. Screenshot by kind permission of SUPERIOR SOFTWARE
All MICROTEST ROMs are fully TUBE ® compatible. (TUBE ® is a reg. trademark of Acorn Computers).

keys 1 to 7 to produce these functions use:

```

721 table?1 = 13 : REM RETURN
722 table?2 = &8B : REM COPY
723 table?3 = &8C : REM CURSOR LEFT
724 table?4 = &8D : REM CURSOR RIGHT
725 table?5 = &8E : REM CURSOR DOWN
726 table?6 = &8F : REM CURSOR UP
727 table?7 = &7F : REM DELETE
  
```

If instead you use any of the numbers &80 to &8A, then pressing the appropriate key will produce whatever is programmed onto the function keys, and this includes *KEY10 which is normally associated with the Break key. If you use code &8A you get whatever has been programmed using *KEY10 except that it does not actually generate the break.

The other useful thing the keys can do is produce control codes. If the keys are programmed as above but with codes 2 and 3 you will have two keys which enable and disable the printer. Codes 8 to 11 would give keys that move the cursor around the screen

(without going into the copy mode in Basic), code 12 would clear the screen, code 21 would delete the current line in Basic, and code 30 would home the cursor to the top left-hand corner of the screen.

If you only want to use these programs as they stand then that's all you really need to know, but the whole point about this system is its versatility. There are all sorts of ways you could use it. I haven't got enough space here to give programs for all the ways you could use the system, so I've provided detailed explanations of the two programs to make them easier to adapt to your own requirements. After the detailed analyses there are some suggestions as to how you could expand the system, both in terms of hardware and software.

Analysis of the listings

Lines 50 and 60 give you the opportunity to calibrate the keyboard. 70 sets up the variables used in the assembly.

80 assembles the keyboard program from location &C00 onwards – the area normally used for user-programmed characters. Therefore, you may want to use a different part of memory. If you aren't using a disc system you could assemble at &D01 (but not &D00 as this location is altered when you press Break). If you are using disc but are not going to be using the RS423 serial interface or the cassette interface then you could use &A00. The other option is not to use the pre-programmed function keys and to assemble at &B00.

90 prints out the line used to save the assembled program.

100 calls the routine which sets up the software for immediate use. If you don't want to do this, simply delete this line.

140 disables ADC events since, if you change the program and try to re-assemble it while it's still active, it may crash the system.

150 gives a standard two-pass assembly.

190-230 changes the event vector to point to our routine.

The Ultimate Tape to Disc System....

THE MOST EFFECTIVE TRANSFER UTILITY CURRENTLY* AVAILABLE,
OR YOUR MONEY BACK!

This system is ROM based and has the following features:

- Instant access.
- Allows use of all available RAM, (&4000 to &7FFF).
- Can handle any length of program.
- Can handle any number of programs.
- Can save to any disc.
- Very user-friendly, (menu driven).
- Contains two transfer routines to ensure effective loading of 99% of currently available software.
- Adventures normally taking six minutes to load will now take about five seconds.
- The system automatically switches to TAPE filing after loading, so that you can still load/save games positions, etc.

••••• PRICE £18.00 (including V.A.T. and post) •••••

At present available for the BBC 'B' O.S. 1.20 with single density interfaces using the standard 8271 chip (e.g. Acorn, Amcom S/D, Watford S/D).

* February 1985.

N.B. This ROM solely provides convenience in loading, and does not break software protection.

Also: The **ADDCOMM** ROM
40 new commands for the BBC 'B' O.S. 1.20 and Electron computer with ROM board. GRAPHICS, TOOLKIT, LOGO GRAPHICS and GENERAL PURPOSE statements all on one ROM.

240-260 is the equivalent of *FX14,3 to enable ADC events.

270-290 is the equivalent of *FX16,1 which selects just one ADC channel. This improves the response speed of the system, though it works well enough with all four channels operating.

310-350 initialises variables used in the program to zero.

If you were to put a character into the keyboard buffer every time the ADC did a conversion, you would end up with a string of repeated characters in no time at all. Therefore we introduce a delay (as set by the variable 'delay' at line 780) so that a character is repeated only once every so many conversions. Thus each time a character is put into the keyboard buffer, the value of 'delay' is entered into the variable 'count' which, on successive conversions, is decremented. If 'delay' has a value of 10 then the delay time is 10 centi-seconds. You may want to change this delay to suit your particular keyboard. 380-400 checks the value of 'count' and decrements it if it's non-zero, else, 430 checks that it is channel number 1 that's just converted, in case other channels are also being used.

470 gets the high byte of the ADVAL value direct from location &2BA.

480-500 divides the number by 8. If you wanted to use fewer than 15 keys you could add an extra 'LSR A' in here and reduce the value of the series resistor. 510 If the key number is zero, it then resets the variables to zero.

530 Check if the number is different from the last character number.

540 Remember the current character number.

550 If the numbers were not the same, give up. This avoids an erroneous key number being produced if a key is pressed during the course of a conversion. Not until the number is the same twice in succession is it accepted as a valid key number.

570 Save the X value.

580-590 Get the Y'th character from the table of characters.

600 Put character in Y register.

610-630 Put character in keyboard buffer.

640 Restore X value.

650-660 Set the count to avoid fast repeat.

700 The table of characters is put immediately after the program. However, if you want to know where the table is so that you can change the characters directly you could use, say, table = &C80. Then the character for key 1 would be at &C81, character 2 at &C82 etc. If you do, you should change 730 to read P% = &C81 + LEN(character\$)

710 Poke the character\$ into memory.

730 The value of P% is moved up so

that when the program is saved, the table of characters is also saved.

860-900 Simply prints out the key number that the machine code program will produce, for setting-up purposes.

The second program is very similar to the first until we get into the assembly language section, so I'll only refer to sections which have been added or modified.

The first main difference is that to select a number of different character tables from a program, two locations in zero page are used to point to the start of the table. An initial value is set up in 250 to 280 to point to the first of the three tables.

The next difference comes at line 620 where we check to see whether the key number is four or more, in which case it is an ordinary character. If it is one, two

or three it transfers this number to the Y-register (650), starts with the offset &60 (660) and adds on Y lots of &20 (680 to 710) and stores the offset at 'table-pointer' (720) before going back through the route of no character having been received (730).

Reading the table (750 to 780) is similar except that the indirect indexed addressing mode is used at line 780. The addresses of the three tables are set up at 900 to 920, and the three character strings poked in at 930 to 950. Setting up the character strings is done in 990 to 1040.

You can change these lines to include function keys, Delete, cursor keys, and control codes.

Compatibility with other software

If you're writing your own programs there's no reason why the keyboard should not be looked at directly. Just use ADVAL (1) (or OSBYTE 128 in machine code) and then deal with the number it returns as you wish.

The keyboard can also be used under interrupt with either of the programs, provided they are assembled in an area of memory not used by your program.

If you want to use the keyboard with wordprocessors such as *Wordwise* or *View* you have to be more careful. First,

neither of these programs reserves the zero page locations &70 to &8F for the user's benefit as Basic does. Computer Concepts suggests that locations &30 to &38 should probably be free on *Wordwise*, but Acorn refused to give any details of zero page usage for *View*. For listing 1 the answer is not to use zero page at all. Variables such as 'tempstore', 'last_char' and 'count' could be allocated to some space within the page where the program itself is residing.

However, in the second program, 'table_pointer' must use a pair of locations in zero page. Probably the easiest thing is to use two bytes in the section reserved for Econet (&90 to &9F) – if you want to work on Econet as well, you've got problems!

Wordwise also uses events. When you do something silly like telling it to delete some marked text when you haven't set any markers, it flashes a message at you for a few seconds. This is controlled by setting the interval timer and switching off the message at the end of the time when the timer generates an event. So, as long as you don't make any such mistakes, your keyboard remains enabled. If it does get disabled, go to the menu mode, go into Basic, type in CALL &C00 and then return to *Wordwise* (remembering to press 'Y' when asked if there is any old text!).

Further expansion of the system

The following possible ways to expand and modify the system are just suggestions – they've not been tried and tested and cannot be guaranteed to work. If you are successful, let us know – your experience might help someone else.

You could use up to 62 keys if you were to remove one of the 'LSR A' commands which each divide the ADVAL value by 2 (line 480, program 1 or line 530, program 2).

It should not be too difficult if you are used to machine code programming to have a couple of switches on the second ADC channel and use these to select a different character table. It could be arranged rather like the Control and Shift keys on the main keyboard so that you have to press 'shift' or 'control' key to get certain functions. And how about mimicking the Quinkey idea? In other words, arrange a set of contacts so that you get a different number according to which combination of five switches is pressed. If you used five switches with 100 ohms, 200 ohms, 400 ohms, 800 ohms and 1600 ohms resistors, then depending on which combination of keys was hit you would get a different value returned by ADVAL.

PREMIER PERFORMANCE NATIONWIDE

The quality of Opus disc drives has always been held in high regard.

Nowhere more than at Cambridge University.

It was their Computer Laboratory who selected Opus after evaluating many other makes of disc drives.

They were selected because of their competitive prices, reliability and quality of after-sales service.

And all the drives have been tested to the limit – running for 8,000 hours. That's a year of constant use without failure.

They can be bought as single or dual drive units and vary from 100K to 1.6 Megabyte, catering for the beginner to a tutor requiring a system for the largest of classroom networks.

All this is backed up by a two year guarantee on every drive – a year more than any other company can offer.

Meet your new

Atomic host

WELL here it is: the start of a new back-up program for the Atom. As the new host of these pages, my aim is to improve communication between Atom users.

I'll be presenting a varied selection of goodies for you including news, views, answers to technical questions, unusual applications of the Atom, and users' hints and routines. Occasionally I may replace the column with a full article. Published hints and routines will continue to earn the odd fiver or tenner, and we'll make an offer for any article we use.

I hope this new lively column will appeal to you and that you'll inundate me with letters. I'd like to hear from you about your main interest: do you want information for the 12k Atom, or would advice on expanding the machine to its full 64k potential be more useful to you? Your response will help me to host your column in the way you like.

All this, however, depends on you – unless you keep sending in your letters, these pages will disappear in a flash, leaving you with nothing but Atomic waste. So keep it coming!

Quick shuffle

AN INTERESTING couple of routines (listings 1 and 2) to generate true random numbers have been sent in by Andrew Buck of Middlesex. Listing 1 prints the 10 digits 0 to 9 in a random order, runs very quickly and always takes the same time, and listing 2 creates a 52 byte array containing the numbers 0 to 51 in a random order and can be used as the basis of a card-shuffling procedure – it runs in just over one second. These listings illustrate how simple really good programming can be. Andrew also provided a listing off a VAX mainframe, on which these routines are used to process random number sequences at an incredible 100,000 loops in about 50 seconds.

It's all change on the forum front – our new host, Mike Barwise, tells you what he's got in store. Plus the winners of December's Atom-only competition

```
10 DIM A9
20 REM Initialise Array.
30 FOR I=0 TO 9
40 A?I=I
50 NEXT I
60 REM Loop to generate random sequence
70 FOR I=9 TO 1 STEP -1
80 REM Generate random number less than
  number
90 REM of remaining choices
100 X=ABS RND% (I+1)
110 REM Print number pointed to by X
120 PRINT A?X
130 REM Copy highest unused number into space
140 REM left by number just output
150 A?X=A?I
160 NEXT I
170 REM Print last number
180 PRINT?A
190 END
```

Listing 1. Andrew Buck's quick random number routine

Disc drive

dilemma

OUR first question comes from Anders Reutersward of Solna, Sweden, who has written to ask: Can more than one disc drive be fitted to the Atom under Atom DOS?

The answer is yes. Two drives may be driven from the FDC card in the Disc Pack, using conventional daisy-chained cable.

The commands *DRIVE and *CAT then take the parameters 0 or 1 (without a space before the parameter) to select the required drive.

Additionally, the later versions of the Acorn FDC card and the Control Universal FDC card can both support double-sided drives. Careful (very careful!) examination of the card will show whether you have this facility. If pin 1 of the 8271 FDC chip is connected via a buffer chip to pin 32 of the disc connector, you can run four surfaces. If so, the parameters 2 and 3 will select the second side of double-sided drives 0 and 1 respectively.

```
100 DIM A100
200 FOR I=0 TO 51
210 A?I=I
220 NEXT I
300 FOR I=51 TO 1
  STEP -1
310 X=ABS RND% (I+1)
320 B=A?X
330 A?X=A?I
340 A?I=B
350 NEXT I
400 FOR I=0 TO 51
410 PRINT A?I
420 NEXT I
500 END
```

Listing 2. The basis of a card-shuffling procedure – it runs in just over one second

Invented a routine or discovered a hardware modification for the Atom? Here's a chance to show your originality and win some cash. Send your idea to: Atom Forum, Acorn User, Redwood Publishing, 68 Long Acre, London WC2 9JH.

ATOM COMPETITION WINNERS

129

Clockwise from top left: making good use of graphics to show how a television transmission system works, A J Worrall's winning entry; Gerrit Hillebrand's bird hovers over the words Acorn User; and one of Mike Bassett's sequences of mathematically generated patterns

NOW the moment you've all been waiting for (well at least 10 of you!) – the results of the Atom graphics routine competition set in the December issue.

Surprisingly, only 10 entries were submitted. We had to disqualify two for not sending a tape, so please read the instructions carefully next time. After a long struggle, we reluctantly had to disqualify two more, as we could not get them to load. So that left six contenders.

The entries were marked out of 100 points, with 50 for programming standard, 30 for image interest, and 20 for special qualities such as useful application of graphics, animation, etc. The overall standard was very high, which

made judging difficult, but here's the decision we finally reached.

The three prizewinners, in our subjective order of merit were A J Worrall of Bexleyheath, Kent; Gerrit Hillebrand of Hengelo, Netherlands; and Mike Bassett of Chorley, Lancs.

The winning entry certainly made the best practical use of graphics. A J Worrall's entry was a lovely animated schematic of a television transmission system which was very instructional, with nicely handled text windowing.

Gerrit Hillebrand presented a somewhat surreal image of a bird flying over the *Acorn User* name in the background of a perspective field, with neat animation and good attention to detail.

Mike Bassett's entry was a continuous sequence of mathematically generated patterns, interleaved with a menu of the sequence. Nice touches included the highlighting of the next menu item in the sequence, a shaded border to the menu, and the ability to hold a pattern for viewing. The graphic patterns were extremely beautiful, but an attempt at rapid background flashing detracted from the overall effect.

The prizewinners can each choose one of the following prizes:

- The Bearsoft Editor (WP) ROM
- SuperBasic ROM
- *Wolfpack* game

and should write to us, stating which of the three they would like.

At **Viglen** the choice is yours

COMPUTER SUPPLIES

First class 400K single & 800K dual (40/80) switchable drives by MITSUBISHI, CANON AND EPSON

Replacing cassettes with disc drives means programme loaded and data accessed in seconds not minutes. Our guaranteed disc drives are supplied with a comprehensive fact-filled 53 page manual, exclusive to Viglen, which shows loading from cassette to disc and other information for the BBC Model B.

**AND EPSON
Slimline Drives**

MITSUBISHI, CANON AND EPSON SLIMLINE DRIVES

All disc drives are supplied complete with Professional Case - Ribbon Cable to connect to BBC Micro - Power Cable to BBC Micro - Comprehensive Manual - Formatting and utilities disc, which includes 13 useful utilities including * formatting * verifying * screen dump * disassembler * generating 62 files, etc.

The drives below are available in the following makes: **MITSUBISHI M4853** (very latest LSI with self centering) * **CANON 6138B** (very latest model) and **EPSON SD540** * For TEAC and TEC models see other Viglen advert.

ABC310 running the GEM software

Icon software shown on ABC

ACORN'S version of the Digital Research GEM software was on display at the Which Computer Show running on an ABC310.

Gem is an operating system which provides icon graphics and windows, as seen on the Apple Macintosh computer, controlled by a desk mouse. Icons are pictures which help people relate computer functions and equipment to office equipment such as waste

paper bins and filing cabinets. The mouse manipulates the icons and removes the need to type at a keyboard to control a program.

Gem, short for Graphics Environment Manager, provides a library of programs to set up the icon screen displays which can be accessed by applications packages such as wordprocessors and databases.

The Acorn version of Gem includes Desk Top Manager, through which all operations are performed (*Acorn User* November 1984). The initial pull-down menu offers Desk, File, View and Options.

File, as the name suggests, provides a filing system based around 'folders'. View allows information to be juggled around on the screen and Options is a varied collection of utilities.

Gem will be supplied with

Desk Top Manager in action

the ABC310 running the built-in Winchester hard disc and mouse. The system will run less efficiently on the ABC300 but must be bought separately at a price expected to be in excess of £3000. At the time of writing an official release date has still to be finalised but should be imminent as 310s are already in production.

Entry point

TWO business packages have been specially written for the BBC micro with the first-time user in mind.

One covers sales and purchase ledgers, and the other stock control and invoicing. Both are produced by Systematics International at £89 each.

Contact Systematics at Cleves House, Hamlet Rd, Haverhill, Suffolk CB9 8EE. Tel: (0440) 61121.

Acornsoft business list out

Sixty packages detailed

ACORNSOFT has released a catalogue detailing more than 60 CP/M software packages configured for Acorn's Z80 second processor and the ABC100 computers.

Wordstar (£400), Supercalc2 (£200) and dBase II (£365) are included in the range, which covers wordprocessing, spreadsheets, databases, accounting, languages and communications. Prices range from £40 (a typing tutor) to £1600 (complete accounting

package) – not including VAT.

Acorn has appointed a range of dealers to handle the business side, and prices are set to allow for a generous margin which enables the retailer to give a high level of support. A dealer will make more selling a £400 software package than a BBC micro, and needn't order in bulk.

More details from Acornsoft, Betjeman House, 104 Hills Rd, Cambridge CB2 1LQ. Tel: (0223) 316039.

Expert advice for Graduates

TORCH Graduate users can now run an Expert Systems development package written in Prolog, the language widely used for artificial intelligence software.

Expert system software is built up by providing a set of instructions and guidelines which enable someone who is not experienced in a subject to consult a computer which will help analyse a situation and decide what to do. Hence in certain situations it can replace a human expert, or at least relieve some of his/her workload.

The package is called ESP Advisor and a licence costs £600. Prolog costs £390. Details from Expert Systems International, 9 West Way, Oxford OX2 0JB. Tel: (0865) 242206.

All you need to know

WHAT effect does the weather have on migraine? If that's what you want to know at the touch of a couple of buttons, then take a look at Knowledge Index.

This is an American database containing summaries of more than 20 million books, articles and reports on science, engineering, medicine and computing. Knowledge Index is accessed from a BBC micro with a modem and communications software.

It costs £25 to join for a year and about £20 per hour of searching on the system. Each search only takes a couple of minutes, however. The database can be accessed after 6pm during the week, or from 2pm on Saturdays. The full version, Dialog, runs all the time but is much more expensive.

Knowledge Index is run by Dialog Information Services at PO Box 8, Abingdon, Oxford OX18 6EG. Tel: (0865) 730969.

Video intro to Plan series

MASTER CLASS plans to follow its training video on the Acorn Z80 second processor with tapes covering each of the bundled software packages in detail. These should be available in the summer.

The first tape gives an intro-

duction to the bundled software – File Plan, Graph Plan, Memo Plan, Accountant and Nucleus. It costs £19.95.

Master Class is at 172 Finney Lane, Heald Lane, Cheadle, Cheshire SK8 3PU. Tel: 061-437 0538.

SAGE - ON BALANCE A WISE BUY?

Francis Pettitt analyses an accounts package aimed at small businesses that includes a second processor

133

'Sage' integrated accounts program and second processor, Sagesoft, GCC (Cambridge) Ltd, 66 High Street, Sawston, Cambridge CB2 4BG, tel: (0223) 835330/834641, £375 + VAT

DIRECTED towards the small business user, *Sage* performs its procedures according to well-established book-keeping methods and requires both manual logging of certain steps and consultation with accountants to function correctly.

The *Sage* program maintains three files, or ledgers as they are called in its user manual. The sales ledger contains transaction data on company sales; the purchase ledger transactions data on all purchases made by the company; and the nominal ledger holds data relating to things such as company assets (eg, the number of cars it owns), company liabilities (eg, outstanding hire purchase debts on equipment used), director's expense account and so on, in addition to sales and purchase ledger data.

A company's gross profit cannot be worked out merely by taking the total value on the purchase ledger away from the total value on the sales ledger: extra expenses and incomes must be taken into account. These are all noted and stored in the nominal ledger which gives the profit and loss figures of the company.

In addition to maintaining these ledgers *Sage* can also generate aged analyses, monthly and year-to-date accounts and balance sheets.

There is an enhanced version, *Sageplus* (see panel).

The *Sageplus* package has many features to make it completely viable for business use. It should be attractive to a large number of small businesses (and perhaps to not-so-small businesses too, as a desk-top check for the manager's office). The wonderful compactness of the programs – it's possible

to store them on one disc – and the fact you are able to keep most data on a second disc, almost creates the illusion that you are using a medium-sized mini-computer with a set of disc-packs!

The *Sage* package will be useful in

NEW SAGE PACKAGE

SINCE I wrote this review Sagesoft have withdrawn the product I saw.

The *Sage* package now available is in fact what was the enhanced version, *Sageplus*, and features all the facilities of that product at the same price of £375 plus VAT.

This is a wise move as the old *Sage* package had several major shortcomings which prevented its serious acceptance by the business world. The greatly enhanced features recommend this version of *Sage* to any small-scale business.

To summarise: in addition to all the old features the new *Sage* package has:

- A greatly expanded data storage capacity which allows up to 9999 sales, purchase and nominal accounts to be entered (10 times more than the *Sage* system).

- The ability to generate sales invoices.

- The ability to maintain stocks and sales records.

- A credit limit field added to other customer fields in the purchase and sales accounts.

- The ability to allocate yearly budget amounts to each of the trading and profit and loss accounts in the nominal ledger.

- The facility for budget comparison through the addition of the budget amounts to the accounts and the production of a budget report which displays figures for a single month's trading and the year-to-date situation.

It utilises two discs, one for the data and the other for the programs, and the method of loading and the hardware used is exactly the same.

the education field too. It could be used to present accounting procedures to trainee staff (without taking valuable time away from the mainframe), and colleges and schools could use it on business-type courses, such as those offered by the Business and Technicians Council. In the educational field it's really only suitable for demonstration purposes, partly due to its complexity.

To run the program you need the *Sage* Z80 second processor (supplied as part of the package), which is derived from the Torch second processor. It comes with the Torch ZDP manual, which is unsatisfactory as it gives fitting instructions largely unrelated to the *Sage* version.

This second processor system has a number of very undesirable features: the ROM has to be placed to the right of the DFS, otherwise the screen fills with rubbish, and so the Z80 DFS comes up first, without the option of having the normal BBC system running and switching into *Sage* mode. The Z80 ROM looks first at the disc in drive 0, and if there is no disc the system hangs up until one is inserted, and no combination of breaks overcomes this. If the Z80 processor is not attached continuous 'No Z80' messages are produced. When the *BASIC command is issued the system switches into *TAPE mode. This seems particularly stupid when you *must* have a disc in the system before you can even start! The command (*CPN), given to switch back into Z80 mode from BBC simply does not work – I tried other combinations, and found that *MCP was perhaps the correct command.

To run the 'Accounts' package a double disc drive is required, with the *Sage* program disc in drive 0 and a pre-formatted data disc, used to hold details of all ledger entries, in drive 1.

No disc shuffling is needed, in con-

135

The Sage package includes a Z80 second processor as well as a manual and software

trast to some other business packages designed for microcomputers, where up to 10 discs may have to be interchanged during one data-processing session. This integration of programs onto one disc is an excellent feature of *Sage*.

Although *Sage* specifies that only one data disc is required, this is not strictly true, because the number of transactions which may be effected is unlimited, and so the amount of stored data may overflow onto another disc. Furthermore, since the 'Accounts' program contains a section that enables the user to maintain a customer address list, *Sage* suggests that a separate data disc is kept of all customer details, and you replace the program disc with this to run this part of the program. (It is possible to store the customer details on either the program or the data disc, but this restricts the disc space available for ledger items.)

The demonstration routine at the end of the manual is useful for trying out the various features and options offered by the system. First, the main menu with 17 options appeared on the screen. I chose option one: allocate purchase accounts. *Sage* includes three fields here: account number, existing account name and new account name. Purchase ledger accounts are entered in the same way. The key field is, of course, the account number. Since the only way of ordering the accounts is by numerical ascending order of this field, users are advised to leave sufficient numbers free between each letter of the alphabet for extra entries to pre-

serve alphabetical order when a print-out of the accounts is needed. I would have preferred a choice of key fields giving a variety of item sorts, so that, for example, a list of unused account numbers could have been provided and a strict control of number allocation for accounts avoided.

Information retrieval

This relative inflexibility of information retrieval from the files securely labels *Sage* as a conservative file-oriented system using traditional book-keeping procedures. While realising that a semi-database approach would probably reduce the amount of data able to be held on two discs, I would have preferred an extra program disc, and a consequently greater flexibility in the format of information retrieval from the system.

Perhaps Sagesoft realise this and may either expand information retrieval facilities in their later versions (I was using version 3 Jan 84) or provide a separate disc with extra features. What must be emphasised is that *Sage* is essentially a data-processing system, allowing the input of data and its processing into information according to well-defined, programmable functions, rather than an information-processing system to aid in the clarification of managerial decisions, and which involves less directly programmable functions. Perhaps the next generation of micro software will be able to miniaturise the operation of total databases to such an extent that it is possible to achieve true mini-computer faci-

lities on a micro. Already, with *Sage* we see features normally found on larger computer systems, and this is obviously a good sign.

The most significant of these facilities is the setting up of nominal and general ledgers. There are three parts: the trading account; the profit and loss (P & L) account; and the balance sheet. The accounts must have numbers allocated to them in a specific ordered system laid down in the manual. Four numbers are already reserved by the system for specific accounts (eg, 38 is allocated to debtor's control account). Obviously, with the opening of nominal ledgers, the amounts entered against each account depend on involved accounting procedures and structures which must be agreed beforehand. The system offers no assistance on these matters which must be worked out with accountants and auditors.

The accounts are able to be collected into categories, thus making monthly accounts rather more readable. For instance, categories could include all those accounts referring to sales, all those referring to opening stock, etc. Up to 15 categories can be defined for the trading account and this should be sufficient for most purposes of analysis. The allocation of categories to specific accounts (by stating the ranges of account numbers) is easily effected through option four (amend layout of accounts) of the 'create ledgers menu'.

The profit and loss account is organised in a similar way to the trading account except that, of course,

The only ROM

Cartridge System that does not overload your pocket or your BBC Micro

Why risk damage to your BBC micro every time you want to change ROM's? Instead, store your growing collection of ROM's in professionally-made protective cartridges!

- All cartridges are gold-plated for durability and reliability.
- No need to switch machine off between cartridge changes.
- Insert and remove 'Wordwise' 'View' 'Disc Doctor', etc., at will, from your micro in absolute safety.
- Low, low power consumption unlike other systems.
- Save on memory.
- Price for complete kit, including cartridge only £15.95.
- Cartridges at £2.95 each.
- Four for £11.00 (ie £2.75 each).
- Ten for £26.50 (ie £2.65 each).
- Kit comes with 1 ROM cartridge, 1 Cable Assembly, 1 Blanking Off Plate (used if system is removed).
- 1 Socket Cover (used when no cartridges are resident to protect against dust).
- 1 Cartridge Rack (stores cartridges safely when not in use, also expands to a Library System).
- All prices inc. VAT.

AU 3/4

the details refer to overhead costs and indirect sales expenses. Here, up to 45 categories can be created so that the accounts may be structured according to their order, or number allocation, as in the trading accounts section of the nominal ledger.

The balance sheet consists of four sections: 'fixed assets', 'current assets', 'current liabilities' and 'financed by'. Here again, categories, and accounts ranges within them, are suggested by the user but are not accorded an obligatory coding system. After the system has been set up and all sales, purchase and nominal accounts have been entered, it allows opening balances to be entered.

In both purchase and sales ledgers the following fields are considered: account code; date (of invoice); nominal account code (this is the account number, entered to identify the particular nominal account which will be affected by the sale or purchase ledger transaction); details (in this case, 'opening balance'); nett (the gross amount of the invoice); the VAT code (at the start this will be '0') and the VAT itself (which will be zero at the opening of the account).

It's easy to enter the opening balance in the sales and purchases ledgers. With the nominal accounts, however, an accountant's advice is essential in order to arrive at credible figures for the various sections. Once these have been reached the ledger may easily be filled. A nice feature of this part of the program is the automatic entry of the account name once the (correct) account number has been entered.

When the accounts have been set up and initialised the *Sage* system allows for normal monthly sales/purchase ledger routines to take place. The computerised system is not a substitute for manual procedures in checking or validating data to be entered. Batch control sheets must be used if the system is to achieve proper control of accuracy. This may come as a slight shock to those potential users hoping to throw away their pens and forms but *Sage* does not provide an alternative to these manual clerical procedures.

Once manual procedures have been completed data may be entered into the various ledgers. Invoices, credit notes and cash receipts may be entered in the sales ledgers. Fields involved are: account number, date, invoice number, nominal account number, details, nett amount on invoice, VAT code and VAT amount. All these fields are well-backed up by validation checks, eg, the date will be thrown out if not entered in the correct format (ie, 150384 for 15th March 84).

If an invalid nominal account number

Sage's main menu has 17 options

is entered this, too, will be rejected by the system. For example, if an article has been sold to the account number holder 094, the nominal account code must be 101 if it is to be within the range set for sales in the trading account section. It would have been nice if the user didn't have to remember the nominal account number every time. Obviously, each user will have a table of nominal account codes before him or her while using the system, but a more sophisticated approach, whereby appropriate codes are shown on the screen as mnemonics would be an improvement. In some cases these nominal account codes could have been filled in by the program through a validation routine.

One of the beauties of the *Sage* system ledger is that any entry in the purchase or sales ledger will automatically update an entry in the nominal ledger. This is the most significant feature of the package and one I consider highly desirable by the majority of prospective users.

Report handling

The report-handling features of *Sage* are what you would expect from a file-oriented system. These features are all useful and the printed format of information is well-ordered and readable. The report consists of nine categories: sales invoices, sales credit notes, sales receipts, purchase invoices, purchase credit notes, purchase payments, cash-book receipts, cash-book payments and journal entries. Each category is accessible through option 12 of the main menu, and option six of the sales/purchase ledger reports. The user can narrow down the type of report information required by specifying the period and code of transactions.

In several report formats only printer options are available, and this lack of screen display options means you waste a lot of paper if you ask for information that only requires a soft copy.

Unfortunately, the system makes no distinction between payment by cash

and payment by cheque, which is crucial to most accounting sections, and discounts received or allowed are not shown on any of the ledger accounts.

At some stage the data disc becomes almost full. Fortunately, the menu shows the number of entries, so if you have calculated how many transactions you're able to store on the disc you will not be in danger of losing any details. A simple reconfiguration routine (a warning will be issued on the screen stating when this routine is needed to be run) will erase all paid invoices, payments and associated nominal ledger entries. It's obviously a good plan to have a well-defined back-up routine, not merely for the program disc but also for the data disc.

The *Sage* system, with its emphasis on manual batch control sheets and regular back-up routine, encourages the setting up of procedures which are common practice in the computerised data-processing departments of any medium-to-large company. I would also advocate use of the generation system of file security for *Sage*. It is a pity, on the security front, that no particular access rights are specified for users. This package is definitely for the one-man band whose only check against unauthorised entry to his data is a secure lock on the office door. This inconvenience can only be avoided by using number and directory facilities available on networks.

I found the editing routines to correct entry mistakes easy to use and sufficiently flexible to cover most cases. It was essential for me to keep an accurate manual log-book indicating all my account code allocations and categories close at hand for frequent consultation, in addition to listings of all types of account details. I would have appreciated it if the *Sage* package could have done more of this logging for me. In particular, a structure chart showing all the relationships between my various types of accounts and their categories would be useful.

With the proviso that *Sage* makes no attempt to provide a brilliant display of database oriented information retrieval services, but is the computerisation and sophistication of well established manual clerical programmable procedures, it can provide an invaluable tool for the small business.

People must choose for themselves between a dual disc business software system that involves expenditure on a second processor and an internal ROM, or a multi-disc business software system that does not. The prospective buyer/user must weigh up the relative importance of cost and convenience to his business and make his or her decision on that basis.

HERE's part two of our cumulative indexes for *Acorn User* numbers 13 to 24 (August 1983 to July 1984), compiled by Paul Nash.

There are separate indexes for authors of reviews, book reviews, hardware/firmware reviews and software reviews. Last month we covered articles without programs, articles with program listings, and authors of articles.

You'll find indexes for our first 12 issues in the December 1983 issue.

Each index entry refers to the *issue number (in italics)*, then the page number at which the item begins.

If you find what you're looking for, but don't have that issue, turn to pages 92-93 for details of how to obtain back issues of *Acorn User*.

PANEL (8k ROM)—This powerful and versatile utility has been designed for the serious assembly language and machine-code programmer. It is the ideal complement to the on-board assembler. All the options of 'front-panels' on other educational micros together with many extra features, including:

*Register and memory display and modification. *Disassembler. *Single-stepping and break points. *Offset calculator. *Intelligent block moves. ROM... £20.00

MICROBA—A biology adventure game in which you can wander around the blood, respiratory system, urinary system and alimentary canal of a typical human being.

Cassette £6.00, Disc £7.00

CATB 'Computer Assisted Tables Bingo'. A novel and enjoyable way of learning multiplications tables. Class set of 30 bingo cards plus program.

Cassette £10.00, Disc £11.00

REGRESS—'Lines of Best Fit' Regression analysis. A powerful graphical program. Linear/Logarithmic/Inverse scaling. Up to 58 points. Remove the worst point. Print results. Cassette £8.00, Disc £9.00

ORDER—A graphic display of 8 major sorting routines: Bubble, Decrementing-wave Ripple, Cocktail-shaker, Straight Insertion, Delayed Replacement, Shell-Metzner, Heapsort, Quicksort. Incorporate procedures in your own programs.

Cassette £6.00, Disc £7.00

DISKIT—STAT: a detailed report on the program size and status of each surface of your discs. Clear single screen display. Print option. EZICOPY: simple copying of all programs from catalogue—menu-driven. RENAME extensions. Disc £5.00

RESMAN—A resources management package. An ideal disc-based filing system for all your resources. Helps you keep track of what you should have. Disc £9.00

VIEW Printer-driver: Juki 6100, Sample 2000, Quendata DWP, Epson FX/RX/MX/DX Canon PW, KAGA Taxan KP, KDC FT-5001, Brother HR15. Disc £5.00

16+ ALGEBRA—A suite of 10 programs to assist in the teaching and learning of Algebra at O level & 16+. An excellent revision aid. Written by an experienced schoolmaster. Disc £10.00

SIMPLE SENSORS for the A-D port. Simple unit plus notes on application and programs. Light £12.00, Sound £13.00, Temperature £11.00, Touch £11.00

N.B. In addition to our software for the BBC microcomputer, we also stock a comprehensive range of Hardware, Media and Accessories: Viglen disc drives, Monitors, Printers, Discs, ROMs, Expansions, Filing systems.

ALL PRICES EXCLUDE VAT & CARRIAGE. Minimum carriage & packing £1.00.

Telephone (0422) 65935 for best prices on quality **HARDWARE, FIRMWARE, SOFTWARE, MEDIA & ACCESSORIES.**

Education Authority Orders welcome.

UNISTAT

STATISTICAL PACKAGE

MULTIVARIATE REGRESSION: Main output consists of estimated coefficients, t-stats, standard errors, R^2 , corrected R^2 , standard error of regression, F stat, and Durbin-Watson stat. Further output options: multiple correlation matrix, var-covar matrix, ANOVA of regression, residuals, plot of residuals, interpolation. Data options: Log/ln option for each variable, no-constant regression, choice of dependent variable, selection of independent variables, auto-omission of linearly dependent variables.

ANALYSIS OF VARIANCE, SCATTER DIAGRAMS AND TIME SERIES PLOTS: One-way and two-way (without interaction) ANOVA tables, scatter diagrams of paired data and time series plots with auto-scaling.

STATISTICAL TESTS, CORRELATION COEFFICIENTS AND PROBABILITY DISTRIBUTIONS: Basic stats on each column of data (size, sum, mean, variance, std. dev.). Chi-square (contingency table), t (one sample, two sample, paired), F, Mann-Whitney U, and Wilcoxon signed rank tests. Pearson's, Spearman's rank and Kendall's rank corr. coeffs. Chi-square, t, F, binomial, Poisson and normal (std., non-std.) distributions. Results of tests and corr. coeffs are displayed with significance levels.

DESCRIPTIVE STATISTICS, FREQUENCY DISTRIBUTIONS AND HISTOGRAMS: Analysis of raw data or data with frequency counts. Raw data sorted and grouped. Choice of lower bounds and class intervals. Absolute, cumulative and relative frequencies. Histograms with up to 200 classes. Output displays sum, mean, mean deviation, median, variance, std. dev., 3rd and 4th moments, skewness, kurtosis, range, etc.

All programs are datafile compatible with Matrix Operations program in UNIMAX package. Data matrix capacity examples (columns by rows): **CBM-64**: 2x1250, 5x700, 10x380, **BBC-B**: 2x750, 5x400, 10x200, **48K Spectrum**: 2x1800, 5x900, 10x500. **CBM-64 (disk): £85, BBC-B (disk): £85, 48K Spectrum (mdvcart/cass): £60**

UNIMAX

LINEAR PROGRAMMING PACKAGE

LINEAR PROGRAMMING: A powerful and instructive optimisation program capable of handling all sorts of linear programming problems (min/max, any combination of \leq , $=$, \geq constraints and $x_i \geq 0$, $x_i \leq 0$, $-\alpha < x_i < \alpha$ sign constraints). Primal, canonical, dual and their solutions are displayed in standard mathematical form. Unbounded problem and no feasible solution prompts. Edit option for all inputs. Capacity examples (variables by constraints): **CBM-64**: 10x35, 25x30, 40x25, **BBC-B**: 10x25, 20x20, **48K Spectrum**: 10x45, 25x35, 50x25.

MATRIX OPERATIONS: Inversion, transposition, determinant, pre- and post-multiplication, scalar multiplication, addition and subtraction of matrices and vectors. Any output can in turn be used as the input of the next operation without re-typing. Matrices can be saved or loaded at any stage. Datafile compatible with UNISTAT package. Capacities: **CBM-64**: 35x35, **BBC-B**: 25x25, **48K Spectrum**: 45x45.

CBM-64 (disk): £60, BBC-B (disk): £60, 48K Spectrum (mdvcart/cass): £45

ALSO AVAILABLE FOR 48K SPECTRUM

* All results can be printed out *

Electron software plea

'WHAT educational software is available for the Electron?' is a question I received from Miss D Hillage of Cornwall Software and have often heard elsewhere.

She suggests that a list of items compatible with the Electron or specifically designed for it would be a good idea, and adds, 'I am surprised that the software market has not made its customers more aware of compatibility with the Electron. They are surely not holding back for fear of the dreaded piracy since this information is

Electron – lacking educational software?

likely to lead to increased sales of the suitable titles.'

So, if anyone has compiled such a list – not just of Electron educational software, but also any for the Beeb which will run on its cousin – please drop us a line.

On guard

THE BRAINWAVE Break key guard is two pieces of mild steel, designed to stick onto the keyboard assembly and poke through the case, covering the Break key so that it may not be hit accidentally. A hole in the top of the guard enables the key to be pressed deliberately with a pencil. Like all good ideas this one is simple, effective and cheap at £2.50. Contact Brainwave at 3 Lynwode Road, Cambridge CB1 2HL. Tel: (0223) 323351.

Commentary by

Nick Evans,

who welcomes

reader feedback

Exchange your ideas and programs – free

IF YOU have any programs or applications for the BBC micro in metallurgy and materials science, I W Clyne of the University of Surrey, Guildford GU2 5XH, tel: (0483) 571281, is waiting to hear from you.

He wrote to us giving details of a conference the University was holding on the BBC micro and materials science which arrived too late for publication – if you want to publicise such an event remember we're working three months in advance of publication.

He also made a suggestion (one that had already been

discussed at *Acorn User*) that universities, colleges and schools should be encouraged to exchange their ideas and programs through our free ad pages.

So if you're interested in taking up this offer, send your ad to the usual address, and include a letter confirming that the materials offered are for exchange and are public domain (ie, no copyright applies to them, either from the establishment involved or from an author). We'll set up a special section for such ads if there's enough demand.

Tidy ROM expansion

AS schools purchase more ROMs to go into the sideways sockets, so there develops a problem with space. Where do you put the extra ROMs when all the holes are filled? Answer – an expansion board. Many schools have merrily bought these and loaded up with extra chips, only to find a few new problems arising.

First, some *-commands are common to more than one ROM so whichever is the nearest ROM in priority executes the command. If that doesn't happen to be the one you want then it's necessary to de-select the appropriate ROMs so that the chosen one will operate – messy!

Second, the problem of over-heating, caused by the extra power necessary to run these chips – not only in the main supply but also in the chips themselves. For example, it's possible to lose entirely your disc filing system so that no Acorn DFS message

appears on the screen even on Break. A pretty pickle if you happen to have a machine full of data waiting to be filed.

Ways of avoiding these problems are numerous. Two of the better ones involve either incorporating a fan into the lid of the machine – or even drilling a few strategic air holes – but this doesn't look very pretty. The alternative is to buy an external expansion board, such as the one manufactured by Micro-Pulse at £49.95. With this you can have the ROMs outside the machine – up to eight at a time – and, an added advantage, the ROMs may be manually switched into operation with an indicator showing which is in use at any time, saving the constant need for *FX selection and de-selection commands.

The board comes complete with connecting cable and instructions. Micro-Pulse are on 0928 35110.

New computer breakaway

AN INTERESTING side-line on the school holiday, trip away or summer camp is the Beaumont Computer Camp.

The camps are structured on half-day sessions – computer awareness and use including Logo, robotics, micro-electronics, languages and word processing take up half the day, with the rest of the time being given over to sailing, canoeing, horseriding, pottery, art, shooting, archery, judo and many other lively activities.

One free place is offered with every group of ten children, and there are 13 sites to choose from around the country. A free video introduced by Chris Searle is available to demonstrate the attractions of the centres.

For more details, contact Beaumont Computer Camps, FREEPOST, Huntingdon, Cambs PE18 8BR. Tel: (0480) 56123.

Robotics are one of the subjects covered at Beaumont Computer Camps

Special pack

SPECIAL schools, mostly ESN (M), are going to receive the controversially priced *Micro-special* pack produced by the Scottish Microelectronics Development Programme.

Originally to be marketed at £250, it met with such an outcry that the DES has bought up the bulk from the publishers Hill McGibbon. Other areas to receive the package are special education centres and MEP information centres.

Wordwise confusion 'regrettable'

WORDPROCESSING fanatics using *Wordwise* from Computer Concepts were pleased to see mentioned in an article in the *Times Educational Supplement* last summer the new Aries up-grade for the chip which included several improvements to the original format.

Imagine their surprise when, having forked out some £8 for the up-grade, they saw another article in the *TES* followed by an advertisement in *AU* for the *Wordwise-Plus*, which combines the usual features with others including mail-merge facilities, index generation, and two column text printout which they had not been informed about when they bought the Aries.

When they contacted Computer Concepts to point out that they had just paid out for the Aries, they were told that it was regrettable but that they weren't going to do anything about it – the full £17 plus VAT upgrade still had to be paid for the new chip.

This has happened to several schools to my knowledge and must be magnified throughout the country. One wonders whether Computer Concepts read letters (address: Gaddesden Place, Hemel Hempstead, Herts HP2 6EX. Tel: (0442) 63933), and whether they take notice of irate *AU* readers who have been led up the garden path.

MEP project needs help

A NEW, wide-ranging course devoted to the full spectrum of micro-electronics and its applications is planned by the South Yorkshire and Humber-side area MEP. A survey is currently taking place of all the initiatives and projects undertaken by schools and authorities, and any successful teaching packages devised as part of the MEP.

If you've not been approached yet and feel you have something to offer, please contact the Project Director, MEP Regional Centre, Exeter Road, Coventry Grove, Doncaster DN2 4PY.

ITMA modules help get micros off the shelf

GOOD news from Sir Keith Joseph (a rare event!). A couple of months ago he stated that provision for INSET (In Service Training) was to be increased in 1985-86 by over £10 million to £17½ million. So let's hope some of that funding can be channelled into training people how to use the micro in the classroom.

Teachers must be taught its applications, its strengths and weaknesses, and then encouraged to buy software – something many primary schools lack.

Although many teachers attended the original induction course on how the micro works when a school bought its first Dol package, the computer has often been left on the shelf largely because of this lack of expertise and software.

One possible help in this direction is the set of programs from the ITMA (Investigations on Teaching with Micros as an Aid) collaboration in Plymouth. 'Micros in the Primary Classroom' is a set of five modules each dealing with different aspects of using

Sir Keith Joseph: good news

computers in teaching. It comprises a good deal of documentation and a lot of very useful programs, designed to be not only utilitarian but also to demonstrate certain fundamental principles of computing in education.

ITMA has been responsible to a great extent for people thinking about the philosophy behind micros in the classroom, and their well thought-out and documented programs are tangible evidence of these carefully constructed principles. The five modules are the classroom, the micro and you; the curriculum and the micro; on managing the micro; building in your ideas; and going-on learning.

The series is published through Longman and costs £20 per module – a small investment if one considers the price in relation to INSET costs. It may be possible for you to borrow, or at least view, the suite at your local viewing centre or regional MEP centre.

The 'Micros in the Primary Classroom' modules help to make good use of computers

CLASS-room newsdesk aids literacy

SPECIALISING in programs for developing reading, writing and general literacy skills, CLASS (Cambridge Language Arts Software Services) is a

new company, distributing through the National Audio-Visual Aids Library.

They have several original programs available including

Add-verse, for creating and storing pages of animated or still shape poems; *Class writer*, an electronic book program; *Space Programme Alpha*, a simulation in which the class members are part of a space project; and *Space Rescue*, an introduction to some aspects of modern micro-technology.

An intriguing idea is *Newsdesk* – a simulation in which the user is a sub-editor in a newspaper office. Newsflashes come in on the teleprinter and background information is found in a variety of forms, and simple word-processing skills are involved.

All these programs are available from NAVAL, 16 Paxton Place, Gipsy Road, London SE27 9SR. Other enquiries to CLASS, 93 Bedwardine Road, London SE19.

SCI-QUIZ WINNERS

WE CERTAINLY set you thinking with our Sci-Quiz in the December issue: only nine entries were worthy of prizes and two of these got one question wrong.

The answers were 1. Mosquito; 2. Bassnotes; 3. 7; 4. Robots; 5. $V = fx$ (velocity = frequency \times wavelength); 6. Carnivores; 7. Polyvinyl chloride; 8. Manned manoeuvring unit; 9. Lithium (or Potassium); 10. 4,500 million.

First prize of five software packs – *Waves, Relationships, Bonding, Electronics and Electromagnetic Spectrum* to

accompany the BBC TV *Science Topics* programme – goes to Arthur Brugman of Voorburg, Holland; second prize of two packs goes to Angus MacLeod of Sir E Scott School, Isle of Harris; and third prizes of one pack go to Shoua Morrison, Roderick MacPherson and Grant Fulton, all also of Sir E Scott School; LHT Griffith of Rainham Mark Grammar School, Kent; Adrian Tivey of Park High School, Middlesex; Brian Ridd of West Buckland School, Devon; and Susan Isherwood of Wirral County Grammar School, Wirral.

AMX ART

AMX MOUSE

The AMX MOUSE is an advanced opto-mechanical device which brings to the B.B.C. micro facilities hitherto only available on more expensive machines. It enables you to use advanced features such as ICONS, WINDOWS, and POINTERS in your own programs.

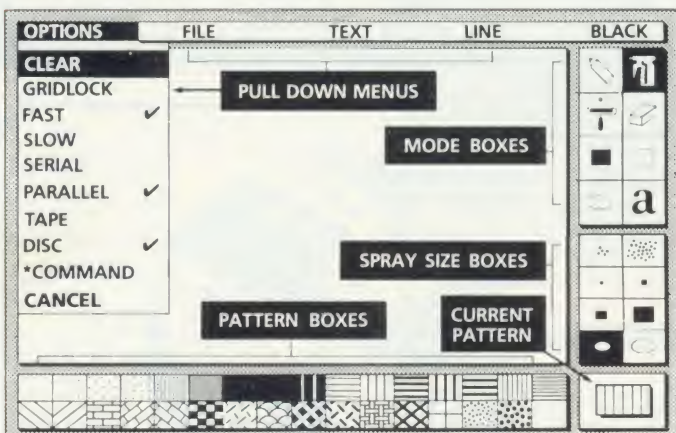

The AMX MOUSE can be used with ordinary programs to replace the cursor keys and with the AMX software it turns the B.B.C. micro into a far more user-friendly device, enabling beginners to quickly learn to use the computer for a wide range of purposes, including COMPUTER AIDED DESIGN, Word Processing, and a host of business uses – to say nothing of its inclusion in games software.

A further range of software will be released in 1985. Starting with "DESK TOP MANAGER".

THE AMX MOUSE PACKAGE

The AMX MOUSE – an advanced three buttoned mouse which simply plugs into the B.B.C. user port drawing its power from the computer.

AMX ART GRAPHICS PROGRAM

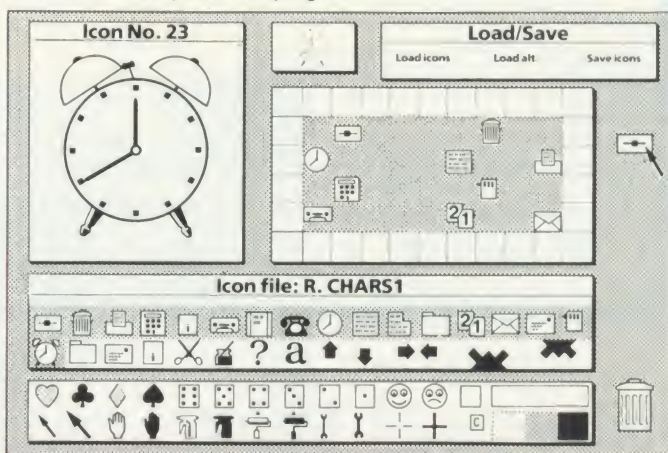

The AMX ROM – contains fast machine code routines for creating on screen windows, icons, and pointers and enables to MOUSE buttons to be programmed for use with commercial software such as Wordwise and VIEW.

A MANUAL describes how to operate the MOUSE and the ROM routines which are available in both basic and machine code programs.

AMX ART – a superb computer aided drawing program on both tape cassette and a 5¼" floppy disc with its own manual. It is suitable for a wide range of uses including preparation of illustrations, architectural and engineering detail drawings, teachers' worksheets, and just creating your own pictures. It soon becomes addictive.

AMX ART includes full use of on screen menu boxes, icons, and pull down menus so that beginners find it very easy to learn and gain confidence in the use of the B.B.C. Micro.

An ICON DESIGNER program which enables you to create and store icons for use in your own programs.

TECHNICAL REQUIREMENTS

The AMX MOUSE can be used with any B.B.C. Model B computer fitted with the Operation System 1.2 and is compatible with the second processor and disc or tape filing systems.

The AMX MOUSE is adjustable for sensitivity via software control and three buttons can be programmed to simulate 24 different key codes.

The AMX MOUSE may be disabled by a simple software command and will then not interfere with normal operation of the computer.

The AMX ART programme enables users to print out screen displays using any Epsom compatible dot-matrix printer. Owners of non-standard printers may use their own screen dump routines.

*Wordwise is a wordprocessing program by Computer Concepts.

*View is a word processing program by Acornsoft Ltd.

DECISIONS DECISIONS

150

'Attack on the Somme', Tressell Publications, 139 Carden Avenue, Brighton, Sussex BN1 8NH, £13.99. '1914', Netherhall Software, Cambridge University Press, Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU, tel: (0223) 312393, £15. 'Relationships', BBC Software, BBC Publications, Schools Orders Section, 144 Bermondsey Street, London SE1 3TH, £14.95. 'Sea Cliff Erosion', Netherhall Software, £15.

THESE four pieces of educational software arrived for review and presented so many interesting points of comparison that it seemed worth looking at them together. They are all simulation packages for the 13-plus age-group, to help pupils learn about a complex process by making decisions and seeing their results.

Each package is accompanied by the sort of literature now customary with good-quality educational software: operating instructions, notes for pupils and teacher, maps, illustrations, and other background material necessary to put the simulation into context.

Attack on the Somme

I received tape versions of the Netherhall software and disc versions of the others, all of which loaded and ran without errors. Two small quibbles about the disc packages: *Attack on the Somme* does not use auto-boot, and the documentation for *Relationships* does not specify that the routine to convert from 40 to 80 track format and vice-versa operates only on drive zero.

So much for technicalities – what about content? By coincidence two of the packages dealt with aspects of the First World War. *1914* is a reconstruction of the first six weeks, when the

national armies were still mobile; *Attack* recreates a later period when the opposing forces had dug themselves in for the long war along the Western Front.

Both simulations involve military strategy, and my first reaction was that it was a pity to employ scarce computer resources in fighting old battles. But the underlying educational objective in

1914

both cases is to show that there are no real winners in war – a lesson more relevant today than it has ever been.

Attack comes with abundant supporting documentation describing the realities of life in the trenches. It also includes an informative introductory program explaining such techniques as mining, bombardment, reconnaissance, attack in wave formation, etc, and pointing out discrepancies between military theory and practice. *1914* takes a slightly more dispassionate approach, aiming to help pupils master the confusing details of troop movements and battles, but the cost of the campaign in human lives is sufficiently emphasised.

The major difficulty with historical simulations is that the more freedom of action given to the players, the less probable it is that the outcome will correspond with reality. The designers of these packages have tackled the problem in different ways.

Attack confines itself to the first day of the Somme Battle, putting the players in the position of General Haig. They must decide upon such issues as length and concentration of bombardment; use of explosive mines; placement and use of infantry, and time and

method of attack. The program analyses these choices to produce a prediction of gains and losses, making a comparison with Haig's own result at the same point. But there is no carry-over into a second day.

By contrast, *1914* puts the players in charge of an army corps, as cogs in a larger machine, whose decisions can be evaluated but will not drastically alter the course of history. It is a competition in seven rounds between three teams representing Britain, France and Germany. Each round marks a separate phase in the campaign, and a choice of three strategies is presented to each team. When all the teams have made their decisions they are shown what happens in consequence, and marks are allocated or deducted accordingly. But the next round will begin again from a predetermined position.

The two programs differ greatly in presentation: *Attack* uses mode 1 graphics (of rather uneven quality) while *1914* uses mode 7, needing to carry a large quantity of text to respond adequately to the wide range of choices allowed. In the classroom it would probably take several lessons to work through the program even once, but the current position can be saved and restored in a straightforward manner. In the end, teachers' attitudes to these packages will depend upon their feelings about war games in general, but both can be respected as thoughtful attempts to handle a difficult topic.

Relationships has more forward-looking theme: the eradication of malaria in a Nigerian village. This is a typical 'allocation of resources' simulation, in which players must select the

Relationships

best combination of measures (within financial constraints) to reduce infection over a six or 12 year period. Possible controls are drainage or spraying of the swamps where mosquito breed, hut spraying, administering drugs at monthly or two-monthly intervals, and public awareness campaigns.

There is a much greater degree of freedom than in the historical simulations – effects of decisions carry over from year to year and random elements such as drought or flooding may also come into play. You can consult a database for information about past decisions and results, either in the village on which the simulation is based or in other villages with different characteristics. A simple query language is provided for interrogation, so as a side-

Relationships

effect the package gives practice in information retrieval techniques.

The user interface is unusually sophisticated, based on the fashionable 'desk-top' presentation with overlapping documents, and fancy cursor-driven methods for option selection. Perhaps someone should buy the programmer a mouse for his birthday! However there is a price to be paid, in the form of delays while screen windows are drawn and coloured in graphics mode, and program segments and data are read from disc. The disc drive works hard during this program, which is the only one of the four not available on tape. *Relationships* is designed to be used in conjunction with BBC Schools *Science Topics* broadcasts – it is very professional in approach and gives a useful insight into a vital area of decision-making.

The final package, *Sea Cliff Erosion*, is the most straightforward – its purpose is to demonstrate the process of undercutting from below and weathering from above which causes sea-cliff erosion and the build-up of beaches. It can be used as an animated text-book diagram, with which pupils can explore the interactions between eroding

agents and rock formations to produce distinctive cliff shapes. The booklet refers to actual examples on the south

Sea Cliff Erosion

and Welsh coasts. This is an interesting idea worthy of further development – perhaps a subsequent version could also illustrate the effects of different rock strata within the same cliff. The graphics are adequate for their purpose, but there are too many straight lines for realism and most pupils will have seen more subtle effects on the BBC micro.

This is a competent but limited package, which in my view must represent less programming effort than the others. Like the other Netherhall software, it's an MEP subsidised issue, yet its price is £15, and I wonder how many teachers will think it worth paying that amount for the relatively small amount of classroom time involved.

At present, high production costs and small impoverished markets make the economics of educational software publishing very uncertain. The batch of programs reviewed here is a good sample of what is currently available, but better ones will become possible as our horizons widen and techniques improve. It is to be hoped that influential bodies like the MEP will encourage the production of imaginative software at realistic prices.

Susan Jones

High percentage

maths programs

'Maths Topics 2', Netherhall Software, Cambridge University Press, Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU, tel: (0223) 312393, £15

THE two programs in this package both deal with the topic of percentages. They have a good background as they have been developed by Netherhall Software in conjunction with the MEP. The authors have steered clear of the sen-

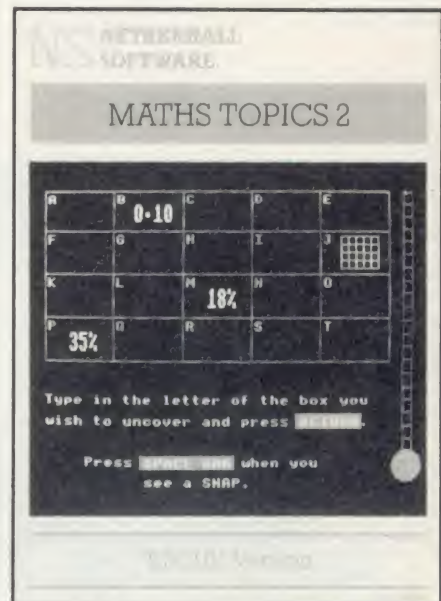

sational approach and there is nothing gimmicky about these programs – but they are still very interesting and practical applications of the computer to a teaching situation.

The first program is 'Percentage Families' and teaches the relationship between percentages, decimals and fractions. It does this by a series of graded tests which are intended to supplement previous standard classroom teaching. These tests display all three elements on the screen as well as a graphic representation of how many hundredths are being used.

The pupil then fills in the missing element. For example, the display may show:

31/100 0.31 ?%

Having answered correctly the child moves to the next level.

The teacher is able to see what has happened if the child hangs up the program on the 'Help needed with...' page by pressing Shift and Escape.

The documentation includes a series of worksheets which are well designed and, above all, photocopiable.

The other program, 'Percentage Snap', reinforces what has been learned by turning it into a thought-provoking game. A grid of squares is shown on the screen, each labelled with a letter.

By pressing any particular letter a percentage, decimal or fraction is revealed. When two appear that match, for example 3/10 and 30%, the child presses the space bar and a 'thermometer' scale rises for each correct 'snap'. There are ten 'snaps' in each grid so all the elements are used.

Both programs are well designed, robust and useful as a point-of-teaching aid and for revision.

Nick Evans

A full LOGO for the BBC model "B" from Logotron.

Logotron LOGO, an LCSI Standard Logo, is now recognised as the fastest and most powerful implementation of Logo available on the BBC Model "B". Copies are now being despatched from stock to satisfied customers around the country.

Logo is a computer programming language which appeals equally to children in primary school and to computer scientists at the Massachusetts Institute of Technology. Logotron LOGO is being bought by:

LOGOTRON LOGO LEADS THE WAY!

Parents who want to keep up with their computer-literate children, but thought they were too old to learn a programming language;
Parents and teachers who are fed up with BASIC and depressed at the poor quality of most educational and recreational software;

Computer users of all ages who are looking for a simple yet powerful introduction to tomorrow's world of artificial intelligence;

Teachers who are looking for ways of helping children with special needs, who may be dyslexic, autistic, or just unusually intelligent.

Logotron LOGO is being used to drive robots, create animated games, create a new generation of educational software, and introduce computing to a new and sophisticated breed of computer user.

The software is contained on a single 16k ROM, and is infinitely flexible through the creation of disk-based extension modules. The manual, contained in a handsome loose-leaf binder and library case, provides all the information needed to write your own software, whether you are a veteran programmer or a total novice.

Educational users can take advantage of a special 'Classroom Pack' introductory offer, open until 31 March 1985, which consists of 10 LOGO ROMs, one full set of manuals and 10 mini-manuals for only £300 (plus £40.51 VAT). Less than half the unit cost of a single system.

Design without

the drag

'Computer Aided Design and Manufacture I: Intersecting Cylinders', Microelectronics Educational Development Centre, Paisley College, High Street, Paisley, Renfrewshire PA1 2BE, BBC (40 track disc only), £12

THE rather grand title of this software somewhat hides the fact that it is concerned only with the solid geometry of two intersecting cylinders.

The programs auto-run from disc. Once the diameters of the two cylinders and the angle at which they intersect have been entered, the program generates a wire frame side-on view. The

and equations used in the package. The extra sheets include a function key overlay and sample developments.

The introductory information on the packaging claims that, 'This package gives an introduction to computer aided design and manufacture. It illustrates how a computer can take over much of the routine of design; how computer graphics can be used to see what an object looks like before it's made; and how the design data held in a computer can be used for manufacture.' This is quite true, but I know from painful experience just the sort of questions a group of perceptive and cynical students would ask: 'What about three cylinders?'; 'What if I want octagonal pipes?'; 'Can it analyse flow turbulence?'; and, the most common one, 'Can we play invaders afterwards please?'.

What MEDC are attempting to do with this package is laudable. However, students tend to be critical unless it can be demonstrated that this type of computer aid would be directly useful to them. If this package were introduced halfway through a project involving intersecting cylinders, after the students had already attempted to produce the developments themselves by hand; and if a plotter or printer were used to draw the developments, I don't think the students would need to be told how useful CAD can be. As always, it's the application and integration of the software that is of prime importance.

Chris Steele

COMPUTER AIDED DESIGN AND
MANUFACTURE I
INTERSECTING CYLINDERS

object can now be rotated about X, Y and Z axes by pressing a function key followed by the amount of rotation required. A zoom feature allows the image to be inspected in detail, and a further function key allows the image to be reset to its original aspect.

Once you've obtained your desired view, function key 7 will produce a surface model with the two cylinders appearing to be solid, but I found this difficult to see on a monochrome monitor.

Finally, and perhaps most usefully, developments of the two cylinders can be drawn on the screen. The documentation suggests that these can be traced from the screen onto paper, allowing a model to be built, but the author admits this is not easy and is prone to inaccuracy.

The documentation includes an A5 booklet and three A4 sheets. The booklet is adequate, describing all the functions of the software and including appendices on the solid geometry theory

Painting to

numeracy

'Number Painter', ASK, London House, 68 Upper Richmond Road, London SW15 2RP, tel: 01-874 6046, BBC B, £9.95

ALREADY famous for their high quality educational software which children enjoy using, ASK has now produced a package appealing to many levels. This arcade-type game is intended to teach and practise basic number skills and bonding. The 'painter'—one of four ranging from Mr Plod to Mr Speedy—climbs the ladders and walks the platforms to paint out the numbers which will take you to a 'target' total. For example, you may start with a total of 12 to your credit and your 'target' is 96. By painting out a 7×8 or a series of addition numbers you attain the target.

It's not always as simple as that—sometimes your starting total is higher than the target and so subtraction and/or division have to be used. All this has to be done against the clock of course,

represented by a bucket being winched up the right-hand side of the screen.

If you are successful at least two out of three goes on any level then you move to the next stage with correspondingly harder tasks. Failure means

that you get a further three attempts at the same level.

The program may be run using joystick or keyboard, and a self-test facility is included to allow the child to test his understanding of the number bonds and their relationship at any given level.

The theoretical pedigree behind this program is immaculate and its objectives are stated clearly—to reinforce the relationship between addition and subtraction; the relationship between multiplication and division; that repeated addition is a way of solving a multiplication sum, though inefficient;

and that similarly, repeated subtraction is a possible but inefficient way of doing division.

A splendid program with excellent graphics—and children actually want to use it!

Nick Evans

Synergy Software

'PROFESSIONAL Software for the BBC Micro'

EASI PLOT

"a very good program . . . overall rating 92% "A + B Computing

Easiplot is a sophisticated and user friendly BUSINESS and EDUCATIONAL graph package. Voted the 14th best educational program, Easiplot has come to be regarded as an outstanding business package and excellent value for money.

This latest version is configured for single or dual disk drives and is compatible with screendump ROM's enabling large or small graph printing.

Ideal for VIEW and WORDWISE reports.

COMPREHENSIVE FACILITIES INCLUDE:

- ★Line, Bar, Pie, Scatter and Data charts
 - ★5 line or bar merging
 - ★Bar/Line conversion option
 - ★Auto or manual scaling
 - ★Comprehensive label and edit facilities
 - ★Screendumps for Epson compatible printers
 - ★Save/Load options on single or dual drives
 - ★Provides easy access to screendump ROM's
 - ★Grid and screensave facilities
 - ★56 page USER MANUAL
- ONLY £24.95

BIOGRAM is a new concept in computer software

For less than the cost of most ROM software the BIOGRAM SYSTEM provides you with the tools to control your state of relaxation and response to stress.

BIOGRAM uses proven biofeedback techniques to provide you with audio/visual impressions of your physiological and psychological state.

Your stress level is detected by two electrodes and is converted and relayed to the computer by the electronic BIO-MODULE. The BIOGRAM software translates this signal into a form that will enable the user to learn to influence his own state of mind.

BIOGRAM is FUN and EASY to use, just plug in the module, attach the electrodes and choose your program. Ready to run in seconds.

BIOGRAM

The BIOGRAM system comprises an electronic bio-module fitted with plugs and electrodes and a suite of programs on disk or cassette.

The BIOGRAM software package includes:

- ★RELAXOGRAM – a multi-level relaxation trainer and progress tester.
- ★LIE DETECTOR – a graphical lie detector with an automatic interrogation facility.
- ★P.REDUCER – a programmable phobia identifier and reducer.

The comprehensive user Manual provides many examples of biofeedback applications and experiments to try.

HARNESS THE POWER OF BIOFEEDBACK – LEARN TO CONTROL YOUR FEARS, PHOBIAS and STATE of TENSION. AN INVESTMENT FOR THE WHOLE FAMILY AT £37.95

SHARE ANALYSER

'an excellent program' *Micro User* – Jan 85
'an invaluable aid' *Northern Echo*
'instant classic' *Bristol Evening Post*
'Excellent investment' *Luton News*

Share Analyser is a comprehensive reporting, analysis and charting package for the BBC Micro. Transaction and share price databases are built up for each share name and a variety of report and analysis facilities can be instantly accessed. Reports can be produced on any printer. Share Analyser is easy to use and is supplied with a comprehensive Operating Manual.

FACILITIES INCLUDE:

- ★Up to 20 share names per portfolio per disk
 - ★Use as many disks as you require
 - ★Capacity per disk – 20,000 whole number share prices and 320 purchase/sale/dividend records
 - ★Reports include Valuation, Profit Statements, Movement Analysis, Transaction Reports etc

Increase your fire power!

More than just a joystick—a system

- ▲ Nylon encased—Steel shafted joystick with ball and socket joint.
- ▲ Fast sprung return to centre.
- ▲ Graphite wiper linear potentiometers.
- ▲ 12 Months Guarantee.
- ▲ 7 day Money back Guarantee (on Hardware).

Complete control at your fingertips

A superb joystick and a keypad for the price of either one. Plus the software to integrate it into the computer's system. One handset will work on it's own in the A/D port as a joystick and two fire buttons. Joystick is immediately compatible with ACORNSOFT and similar software.

The interface joins together the analogue and the user ports to use the full keypads giving a total of 24 user definable keys. The interface can also be used as a splitter for the A/D port to take two items at the same time, e.g. joystick and lightpen.

DELTA DRIVER on cassette or disc: Two programs on each cassette or disc. One converts machine code programs from the keyboard to the joystick or keypad, with adjustable sensitivity on the joystick and will run on any O.S. The second program (needs O.S. 1.0 or later and an interface) duplicates any keyboard keys on the keypads, in the operating system, so that it can become a numeric keypad or will take on the function keys.

Numerous stockists nationwide or direct from us.

Soccer

supremo

'Football Manager', Addictive Games, BBC B, £6.90

WHAT an interesting game. When you kick off (to coin a phrase), you're at the bottom of the fourth division, managing a side of your own choice. Naturally, I picked Manchester United, but if you really want a laugh you could pick Arsenal, Liverpool, Accrington Stanley or some such band of one-legged brigands (Bruce got his revenge on the screenshots!).

You're allowed a squad of 16, and you have to look after them, making sure that their energy levels don't fall too low (it's the women you know, but what can you do?). When you need to bring in some new blood the transfer market is open to you. If you're a bit broke you can tap that ever-friendly supplier of funds and part-time carrion crow, your bank manager.

You have to guide your squad through the full season. If you're something of a star supremo, like what I am, you move up through the divisions

quite quickly – how fast depends on which of the seven skill levels you've chosen. Edited highlights of each game are shown, just to torment you and reduce your nails to tatters. Mode 7 '3D' graphics are used to surprisingly good effect here.

It really is a very gripping game as you battle through, plagued by injuries and financial worries, but the joy of that lap of honour round the living-room after you've thrashed Spurs 5-0 in the Cup Final makes it all worthwhile.

One gripe. Me and the lads was sick as a parrot when we was demoted from the first to the fourth divvy on account of we wasn't able to load our saved position. Saving the position is easy enough but reloading it is another bag of chips. When the main game has loaded, and it's very long, no screen messages appear to let you know that

any attempt is being made to load your data file. If you haven't previously wound your data tape to the correct position, or if your tape player is a bit dodgy you're doomed to starting each session in division four and loading the whole game at least twice.

Otherwise excellent. **Harry Sinclair**

Lapping up

the thrills

'Pole Position', Atarisoft, BBC, £9.99

ARCADE addicts will doubtless be familiar with the driving game *Pole Position*, in which you take the wheel of a racing car and drive very quickly round a circuit. Well, now you can do the same thing on your BBC micro as *Pole Position* has been adapted for it, retaining all the excitement and skill of the original.

You first undertake a qualifying lap; your time must be good enough to rate you in the first eight, or you won't get onto the grid.

Once a bonus for position has been given, the race starts and as it progresses, more and more cars appear in front of you, and they must be passed carefully if you are to get a good score. A countdown timer is displayed – 55 seconds are added if you complete a lap, but if it reaches zero the game ends because you are being too slow. However the game ends you are awarded a bonus of 50 points for each car you passed, and a time bonus of 200 points per second still on the clock.

The course is very similar to the arcade version, right down to the fourth bend, a very tight left-hander which has

to be taken carefully. The Atari balloon pulls messages across the track before the race, and the background scrolls. In fact, my only niggle about the graphics is the jerkiness of some movement. The car seems to lurch across the track, and the trackside signs jump towards you about ten yards at a time, but the rest of the graphics are above average.

Sound is good, with engine noises and a great chuck-chuck sound as you hit the kerbs.

All in all, a very well written program – all it lacks are cars passing you, as on the arcade version, but that has a little more memory and power behind it!

Stuart Menges

So long,

Cylons

'Space Station Alpha', Icon, BBC B and Electron, £7.95

THE mission in *Space Station Alpha* is for you in the last remaining space station to destroy incoming Cylons, preventing their deadly lithium torpedoes from reaching Earth.

When loaded, the screen went blank for about ten seconds while it drew stars and other objects. There don't appear to be any instructions on what keys to use, so I defaulted to *Killer Gorilla* keys and they seemed to work.

Unfortunately the screen never changes from a well-drawn view of Earth, the moon and the front of your space station. The enemy ships always come one at a time from the top right-hand corner, making it easy to hit them. Occasionally one slips through, and unless you're good at following Cylons with the sights, its ammo will hit Earth and lower the shield power.

The graphics are good if a little monotonous, and when the Earth-shields are fully drained a very impressive explosion takes place, with bits of planet spinning off in all directions and very realistic sound effects. Your laser consists of a white line briefly flashing on the screen, accompanied by a zap sound, but with good explosions.

To sum up, Icon has come up with quite an addictive 'annihilate the nasties' game, with fair but slightly flickery graphics. Sound is adequate and presentation colourful, but *Space Station Alpha* seems to have an amateurish feel.

Rob Fenton

...Let your BBC play the game...

KEMPSTON BBC PRO JOYSTICK

This new joystick has been designed to complement the BBC Computer in both style and performance.

Based on the best selling Competition Pro 5000 series, the BBC Pro Joystick contains micro switches allowing movement in a total of eight directions together with twin fire buttons for left and right handed play.

The joystick is moulded in cream and brown and plugs directly into the analogue port ensuring compatibility with a wide range of existing BBC software without the need for expensive interfaces.

He's a crystal

ball wizard

'Mr EE', Micro Power, BBC, £6.95 (disc £9.95)

MICRO Power's range now includes this excellent version of the popular *Mr Do* arcade game. The idea is to guide a wizard (Mr EE) round various screens, collecting groups of cherries and killing monsters called Umphs who try to stop him. There are two ways of disposing of an Umph – the apples dotted around the screen may be pushed or dropped onto the creature, or Mr EE can resort to throwing his crystal ball at it.

When all the cherries are eaten or all the Umphs are vanquished, the screen ends. There are ten different screen layouts in the shape of numbers.

At the top of the screen are five

special letters – E, X, T, R, A. Every 5000 points, one letter turns into a letter monster, and if this is killed the letter changes colour. Once all five have been collected you gain an extra life. If Mr EE walks over the Umphs' hideout at the centre of the screen, a letter will come on, and three especially nasty characters appear. On killing them, the game speeds up.

As for graphics, the game follows the original almost exactly – in fact it's hard to tell the difference. Movement is smooth, colour has been used well, and the backgrounds are cleverly done – some are stripes or mottled. Sound is also above average.

I have only one or two slight criticisms of *Mr EE*. Once, for no reason, the game locked up on me. There is also a bug which causes a dead Umph to continue falling from top to bottom of the screen again and again. Annoying, but it's a rare occurrence.

Apart from these minor problems, we have another classic arcade game to follow the excellent *Killer Gorilla*. The whole program is very well written, a delight to play, and, I'm sure, a best-seller for the Beeb.

Stuart Menges

Who'll be king

of the castle?

'Castle Quest', Micro Power, BBC, £12.95 (disc £14.95)

NOW that *Elite* has broken the games mould and set the standard for the future, it's good to see Micro Power following in Acornsoft's footsteps. *Castle Quest* is, I quote, '... an interactive adventure and strategy game with arcade-style action and graphics'. It's rather a mouthful and a lot to live up to, but this sentence actually sums up the game quite accurately.

The scenario is a castle, and the aim is to use the various artifacts that just happen to be scattered about to solve puzzles, so that you can make a complete tour of the castle. Without giving too much away, I'll say the artifacts include swords and oxygen cylinders.

The puzzles? Well, for instance you've been caught by some nasty green guards, dumped into a dingy dungeon, and all you have in the cold with you are a stool, a bed and a burning torch much too high for you to reach, and you must escape.

The fun of the game is in how you play it, and it's certainly a challenge – so much so that Micro Power are offering £1 to every person who can solve the puzzle within three months of purchase, and a further £500 worth of computer equipment to the winner of a future competition between the four highest scorers.

Visually *Castle Quest* is easily identifiable as a Micro Power game. There's little use of sound other than the pitter-patter of feet, and mode 2 provides some good use of colours. The characters include the odd wizard and lots of little red monkeys running everywhere, and the game introduces the delightfully named Scrollerama – a technique for producing the best hardware scrolling I've seen yet on the Beeb.

Thirteen keys are used in all, though you can use only ten at any one time.

However, because the game is not an all-out arcade game this is not a problem. Scoring is almost impossible!

Although *Castle Quest* is an on-going adventure it's not possible to save your present position, so you must start each game anew.

While not jumping into *Elite*'s shoes *Castle Quest* follows closely in its footsteps, and although not cheap it's certainly worth buying.

Bruce Smith

On your

bike, Eddie

'Eddie Kidd's Jump Challenge', Martech, Martech House, Bay Terrace, Pevensey Bay, East Sussex, BBC B and Electron, £7.95

YOU start Eddie Kidd's official *Jump Challenge* by completing a few practice jumps over barrels on a BMX bike. I didn't see much point in this as it seemed to waste valuable program space which could have been used to enhance the graphics.

Anyway, once you've managed to negotiate the jumps on the BMX you're allowed to try it on a motor cycle, and this time the objects are cars, trucks

and jeeps. If you fail, it's back to the BMX for more practice.

The sideways scrolling of the screen is very good, although I did notice a slight amount of flicker in the graphics. Control of the game is either keyboard only or a combination of keyboard and joystick – I found keyboard only the easiest.

There is of course the competition – the winner is the person completing the longest jump, and you are able to save this on to tape. The game gets very boring after a short time – I even recruited a few children to play it and they felt the same – and at £7.95 it's a bit pricey.

Dave Morgan

COMPLETE BASIC ROM DISASSEMBLY?

NO! The BBC BASIC ROM User Guide offers much more than a ROM disassembly, ever could. Every routine in BASIC 1 and BASIC 2 is covered in great detail, together with full descriptions, execution addresses, entry conditions and exit conditions, allowing proper interfacing with your own machine code programs. This massive book (360 pages) provides an incredible amount of information for the intrepid machine code programmer, allowing new commands to be added to BASIC, Bad Programs to be salvaged, PROCedures to be dynamically overlaid from disc, full error recovery and much more. For those who really want a complete disassembly, there's even a disassembler program which uses the assembler data from the BASIC ROM!

Mark Plumbley worked in conjunction with Adrian Dickens (co-author of the Advanced User Guide). The AUG gave a thorough description of the Operating System: this book does the same for the BASIC ROM. Available from your local bookshop, larger branches of WHS, or direct from the publishers for only £11.45 incl. P&P. **SPECIAL OFFER** - ROM book with all the programs on a cassette for only £17.95 incl.

First steps in

learning to

program your micro

'BBC Micro B Starter Pack', Ken Bodley, Doug Brown and Brian Samways, Collins Software, £19.95. 'Beginners' Basic', Clive Prigmore, Windward, £9.95. 'Very Basic Basic: the first 15 hours on your Electron', Derek Ellershaw and Peter Schofield, Century, £2.95

If you've just got your BBC micro or Electron you may be rather baffled by it and on the lookout for useful books to teach you to use it and to program it in Basic. I'll review three such packages aimed to help you find your feet in the world of micros.

The *BBC Micro B Starter Pack* is a

sixty page A4-sized book containing two cassettes in a plastic wallet. It was developed at the Birmingham Educational Computing Centre and aims to teach Basic in 'a painless and informal manner'.

The book is well laid out with clear print, and it is obvious that the authors have much experience of introducing beginners to computing: for instance the text clearly identifies which keys to press by a small picture of a key shape with the legend inside. There are also many black and white photographs showing what the screen should display.

The text leads the beginner through the use of the keyboard and gently into Basic with plenty of examples and exercises. It's remarkably free from the clutter of jargon that surrounds micros, and terms used are fully defined. The book also explains in detail how to connect up the computer system, and load

and save from cassette.

Some of the programs on the two cassettes are demonstrations of the potential of the computer; others are used to support understanding of each chapter. They let the beginner get on with the programming without the problems of typing listings into the machine correctly. My only criticism is that the graphics demonstrations at the end leave a lot to be desired.

The *BBC Micro B Starter Pack* is the most expensive of the beginner's books but remember the price includes the two cassettes. It works at a sensible pace, provides a useful well-structured introduction to Basic and its lively, sympathetic approach should appeal to the BBC micro owner who wants to learn to program.

Beginners' Basic is claimed to be a teach-yourself, step-by-step guide to computer programming which can be used with all popular home computers including the BBC micro and Electron. Any book suitable for all popular home computers must be a compromise and cannot deal successfully with all the idiosyncracies of each, and this is no exception.

Beeb and Electron owners will be disappointed to find the only references to their computers are on the front and back covers: there is no mention of the differences between the various machines or alternative programs. The beginner to BBC Basic will be left wondering why his or her machine

does not always give the same results as those in the book. Some of the programs will not run on the BBC micro or Electron, and others have a different screen format from the printouts shown.

Another limitation is that because the book aims to be suitable for all computers it cannot deal with the Basic keywords, which vary greatly from machine to machine. The book, there-

fore, does not deal with sound, graphics, procedures, or saving and loading files. Some keywords available on many versions of Basic, but not BBC Basic, are included in programs, and this is not stated in the text. An example is the keyword *RANDOMIZE*, which BBC Basic does not recognise – the text mentions that the keyword is often not needed, but does not point out that it's not available in all versions of Basic and will cause an error.

I do not feel this book would inspire the beginner with confidence and enthusiasm. The style is rather dry and lacking imagination, the screen printouts do not always look the same as in the book and there are no sections to deal with individual machines and their differences.

Very Basic Basic is a paperback which aims to guide the beginner through the first hours and weeks of

understanding of Basic. It does not claim to be a full manual for Basic, but to provide a foundation for understanding the more complex books on programming.

It's well laid out and readably written, starting off by explaining how the Electron is connected up, and how to use the keyboard. There are chapters on loading and saving, and the use of types of printer. Although technically nothing to do with learning Basic, most newcomers find such information useful. The book is rather optimistically subtitled – a beginner would be hard-pushed to complete it in the first 15 hours.

There are many short examples to be worked through and each is carefully explained. The reader is encouraged to experiment with programs and try out variations.

A useful book for the beginner who wants to learn programming, at a very reasonable price.

BBC/ELECTRON PROFESSIONAL SOFTWARE

Our educational software is used in thousands of schools and homes throughout Great Britain.

EDUCATIONAL 1

BBC/ELECTRON

Tape £8.00 Disc £10.00

Hours of fun and learning for children aged five to nine years. Animated graphics will encourage children to enjoy counting, maths, spelling and telling the time. The tape includes six programs: MATH 1, MATH 2, CUBECOUNT, SHAPES, SPELL and CLOCK.
... 'An excellent mixture of games' ... Personal Software - Autumn 1983.

EDUCATIONAL 2

BBC/ELECTRON

Tape £8.00 Disc £10.00

Although similar to Educational 1 this tape is more advanced and aimed at seven to twelve year olds. The tape includes MATH 1, MATH 2, AREA, MEMORY, CUBECOUNT and SPELL.

FUN WITH NUMBERS

BBC/ELECTRON

Tape £8.00 Disc £10.00

These programs will teach and test basic counting, addition and subtraction skills for four to seven year olds. The tape includes COUNTING, ADDING, SUBTRACTION and an arcade type game called ROCKET MATHS which will exercise addition and subtraction. With sound and visual effects.

... "These are excellent programs which teachers on the project have no hesitation in recommending to other teachers." ... Computers in the Classroom Project, Riley High School.

FUN WITH WORDS

BBC/ELECTRON

Tape £8.00 Disc £10.00

Start your fun with alphabet puzzle, continue your play with VOWELS, learn the difference between THERE and THEIR, have games with SUFFIXES and reward yourself with a game of HANGMAN.
... 'Very good indeed' ... A&B Computing - Jan/Feb 1984

JIGSAW AND

SLIDING PUZZLES by P. Warner BBC/ELECTRON

Tape £7.95 Disc £9.95

There are two jigsaw and four sliding puzzles on a 3 x 3 and 4 x 4 grid. Each program starts off at an easy level to ensure initial success but gradually becomes harder. It helps children to develop spatial imagination and in solving problems. The tape includes: OBLONG, JIGSAW, HOUSE, NUMBERS, CLOWN and LETTERS.

KON-TIKI by J. Amos

BBC

Tape £10.95 Disc £12.95

Simulation program based on Thor Heyerdahl's KON-TIKI expedition. Enjoy a journey on the KON-TIKI recording on a map the raft's position and entering notes in the logbook on creatures found, unusual events etc. Inclusive of booklet, background information, maps and fully supportive illustrated data sheets.

... "A well thought-out package with a wide appeal" ... Which Micro & Software Review - October 1984.

Golem Ltd, Dept A, 77 Qualitas, Bracknell, Berks RG12 4QG. Tel: 0344 50720

Don't play Blindman's Bluff.

Imaging A program that takes pictures for printing, storage and transmission. A second version of the program can be used to record a short animation sequence.

Object recognition A powerful program for analysing a scene containing multiple non-overlapping parts. Area, perimeter, centre of gravity, are calculated in a split second.

Movement detection A program that analyses any movement in a scene which for example could be used to count the number of people moving down a street or ring an alarm if anything moves.

There's no need to keep your home computer in the dark a minute longer. The Micro-Robotics EV1 is a revolutionary new electronic camera that can be connected to your computer to give it the power of sight. It has applications in the fields of security, in industrial object recognition, graphic design, robotics and Artificial Intelligence. For the first time it is possible to capture black-and-white and grey scale pictures on a microcomputer without the use of an expensive external video camera. Full documentation and a comprehensive library of useful software are provided with each system, all for **only £129.95 (inc. VAT)**.

Dealer enquiries welcome.

Malcolm Banthorpe focuses on a dynamic RAM camera

Micro-Robotics EV1 solid-state camera, Commotion, 241 Green Lane, Enfield EN3 7SJ, £129.95 (inc. VAT)

IF YOU were to remove, accidentally or otherwise, the top from any silicon integrated circuit package, chances are that you would find its operation would be affected by the light. Most semiconductor junctions are sensitive to light to a greater or lesser extent. An enterprising manufacturer has realised that the potential of using dynamic RAM (many times cheaper than a CCD array of similar size) as a low-cost image sensor was too good to ignore, and has produced the IS32 optical

RAM. This device has a quartz window like an EPROM and its cells are arranged as two 128 by 256 arrays. The IS32 is found at the heart of the EV1 solid-state camera.

The camera is housed in a black plastic case which is little bigger than a matchbox and is connected to the user port of the BBC micro via a seven-way ribbon cable. The image is focused onto the sensor by a 24mm Pentax lens with a bayonet mount and is interchangeable with other lenses (eg, zoom or wide-angle) if required. There is a standard tripod mount at the base of the camera, and a manual and disc of application software are also included.

A miniature camera which can be directly connected to the micro for £130 may seem too good to be true, so I'll point out its limitations:

- Each cell in a dynamic RAM is essentially a two-state device (either on or off) and so it's only possible to generate a two-level display (ie black and white) directly. You can build up a picture which displays intermediate grey levels by using multiple exposures.
- The exposure time required to discharge some of the cells to an off state will depend on the overall light level of the scene. The shortest exposure time available in the software, which works for fairly bright daylight (sunlight is

generally too bright without a filter), will allow a picture repetition rate of about 15 per second.

● The two 128 by 256 arrays which make up the sensor chip are separated by a narrow gap. As a result, a narrow strip of the image falling on the chip is not recorded and there is a horizontal line of discontinuity halfway down the picture, visible in the illustrations.

● The overall light-sensitive area does not conform to the 5 by 4 aspect ratio of the screen and so it is not possible to display an undistorted full-screen image, except by displaying only part of the image potentially available from the camera.

Most of the limitations outlined above are serious only if you're hoping to capture high quality images for display. The main potential of the camera lies in the areas of robotics, shape recognition and possibly security.

The programs supplied illustrate some of the possible uses: 'EV1' is the simplest program and repeatedly displays whatever the camera is looking at as a two-level image. Because there are only two levels, the adjustment of exposure is fairly critical to obtain the best results, and can be adjusted by means of the up and down cursor keys. There is provision for making a screen dump to an Epson printer.

'Movie' allows a number of pictures to be recorded and replayed in the form of a short animated sequence.

'Grey' displays a full-screen picture in simulated grey levels. Mode 0 is used and the picture shown is a combination of eight separate exposures. The manual suggests a method of creating colour pictures by means of multiple exposures through a series of different filters. I found that a pseudo-colour picture could be obtained by modifying the program to run in mode 2 and then changing some of the actual colours displayed by using VDU19.

'Secure' operates by detecting the changes between consecutive pictures which will be indicative of the movement within the camera's view. Having set the exposure, the program goes into 'learn' mode to assess the amount of movement generally present owing to moving trees, etc. The amount of activity in the scene is then displayed as a graph at the base of the screen, which takes about five minutes to fill the screen horizontally and is then cleared and repeated.

'Animal' is the most impressive of the programs supplied and shows the potential of even a simple image sensor in object recognition. The cursor keys are used as in 'EV1' to set the optimum exposure, but the software causes each object in the camera view to be displayed as a series of out-

Clockwise from top: pseudo-colour portrait produced by running the grey-scaling program in mode 2; reading letters and a drawing with shape-recognition software; the security program watches a parked car; more from the grey-scaling program

lines. This outline information is used by the program to analyse each enclosed shape on the screen in terms of its area, perimeter and a number of other parameters. As a result, once the computer has been taught the names of the objects on the screen, it makes quite a good job of recognising them even if rotated or changed in size.

The manual I received was only a provisional version but contained descriptions of the programs, background information on electronic vision in industry and suggestions for projects.

The main body of each program is written in Basic and with the information contained in the manual it

shouldn't be too difficult to make modifications for your own use. The manual also contains details of entry points into the machine-code routines which are used to read to optical RAM, making it possible to write your own applications programs around them.

If you are looking for a vision system that will allow the capture of high quality images for the purposes of computer art then this camera is not for you. If, however, you wish to experiment with object recognition this is probably the lowest cost entry into this exciting field and the camera should prove well up to the task. Its smallness makes it eminently suitable for mounting on a robot.

NEW 16k EPROM

***HEX**, Is a full HEX dump, displaying 8 bytes of HEX and ASCII equivalent per line. A status line shows the current address and the byte at this address in: HEX, ASCII, Decimal and either the binary, basic token or assembler mnemonic. Forward and reverse scrolling of the display at normal and

high speeds is a feature, as is a full on screen memory editing facility which allows inputs in either hexadecimal, ASCII characters or assembler mnemonics.

***MON**, Serves the same function as *HEX, but the display is in disassembled opcodes, rather than *HEX. The editing and scrolling facilities are the same as for *HEX. An additional feature of *MON is the ability to directly follow JSR's, branch's etc.

***DEBUG**, A full featured program debugging aid, allowing the programmer to see the most intimate details of the program under examination. Features, variable speed, single stepping, breakpoints, continuously updated disassembler, selective HEX dumps (up to 6) plus current stack, all continuously displayed on screen, plus many other features.

***DISCED**, A comprehensive disc sector editor enabling any sector of a disc to be read, inspected, edited and written back. It will work with any 40, 80 or dual formatted single density disc.

***DGET**, Searches a disc for all occurrences of a string or group of bytes.

***REL**, Enables machine code to be easily moved around in memory, automatically adjusting JSR's, JMP's etc.

***SLOW**, This command causes the entire computer to slow down to any variable speed between 1 and 255. This can allow the in depth study of graphic's methods etc.

***EDIT**, A dynamic basic screen editor, cursor controlled with full forward/reverse scrolling of listing, incorporating insert/delete lines, insert/overwrite characters, enter line from any position after editing.

"No need to Sweat! Let me be your slave."

***REF**, Produces a cross-reference listing of the current basic program. All variable names are listed (WITHOUT HAVING TO RUN THE PROGRAM!) in alphabetical order followed by the line numbers on which they are referenced. Numeric items can also be crossed referenced if desired.

***SORT**, A built in sort routine allowing any single dimension array, be it integer, real or string, to be sorted.

BASIC COMMAND LIST:
*PROG, *BAD, *EXTEND,
*PACK, *SORT, *PAGE,
*ENVELOPE, *FIND,
*REPLACE, *XREF,
*TRON, *TROFF, *CHAR,
*EDIT, *EDKEY.

**MACHINE CODE
COMMAND LIST:**
*MCODE, *MOVE,
*CROM, *SLOW, *GET,
*PHEX, *GO, *MON,
*HEX, *SPACE, *DGET,
*DISCED, *DIS, *DEBUG,
*CRC, *REL.

Designed with the serious programmer in mind, a 16K Eprom packed with a multitude of programmer friendly utilities, as with all SLAVE'S, SLAVE is instantly available and will obey an extensive range of commands. So why not invest in more muscle for your BEEB, and get some help with the heavy work!!! SLAVE has over 30 comprehensive machine code and basic tools.

Smith-Corona Fastext 80, £195 plus VAT

I BRIEFLY mentioned the Fastext 80 last month, and happily, its unfortunate demise after two days was speedily remedied by SC UK, who sent a replacement and tractor feed.

The Fastext 80 is a monochrome dot-wire printer – not colour as you may have been led to believe. It has eight dot wires in the printhead, and produces characters on a 9 × 8 matrix, with the bottom dot reserved for descenders (tails on g, y, etc). It is based on standard, even old-fashioned, technology and comes in its standard form without a tractor feed, and no roll holder. It is small, neat and capable of text and graphics. The graphics dumps produced rather unevenly shaded pictures (figures 1 and 2). The results of the test program (figure 3) illustrates the text styles available.

The dump programs this month for the Fastext are all in Basic, and can be used on any printer with 'plotter graphics' using the control code ESC*5

Figure 1. Testcard dumped by listing 2 – note the stripy quality

(Epson FX80, Canon PW1080A, Taxan Kaga). Listing 1 is a pattern dump for mode 1. It thus produces undistorted output, though the patterns are a little stripy.

Basic programs tend to be slow, so I have modified listing 1 to give the two-liner, listing 2. This runs at the maximum possible speed (I think – readers will probably tell me otherwise!), which is about one and a half times the speed of program 1. The modification includes: a) use of system integer variables throughout, b) deletion of REMs and c) deletion of spaces. The result is thoroughly unreadable, but faster.

Listing 3 is a similar pattern dump for a mode 2 screen, in fully packed form. It works on the same lines as listing 1.

To use listings 2 and 3 you can either CHAIN them from within your graphics program (having first performed a *OPT1,0 if you use tape), or merge them on to the program (*User Guide*, page 402), adding lines

```
29999 DEF PROCdump
30020 ENDPROC
```

TEN POINT TEST

How many marks
out of 10 does
George Hill give
the Fastext 80?

and call them from within the program by inserting PROCdump at the point where you want the dump to occur.

Now let's get back to reviewing. Below is a list of ten desirable characteristics in a printer selling at under £200. I'll say how the Fastext 80 performs, and you can see how your own measures up.

First, the printer interface should be Centronics, as any other will involve either extra expense or inconvenience.

Leads should be supplied (if bought from a dealer) and a mains plug fitted. If you don't insist on this, you might have to pay up to £20 extra! The Fastext 80 reviewed didn't have a lead, or mains plug.

Tractor feed and friction feed are essential as standard for paper handling, so that fanfold paper and single sheets can be used. Feeding paper in should be easy, and the tractor should be fully adjustable for width. A convenient way of tearing off the paper at a page end is also important. The tractor feed is not standard on the Fastext 80, though it's easy to fit, and is simple and convenient in use. Poor design hampers tearing off paper.

Push-button control is useful – you should be able to switch the printer on and off-line, and to formfeed and linefeed by just pressing buttons. The on/off-line button on the front of the Fastext 80 is highly inconvenient. There is no indicator light, and it's impossible to tell at a glance whether the printer is on or off-line.

You should be able to control by DIP (Dual In-line Package) switches the automatic linefeed; the character set nationality; the 'zero font' (ie, whether the zero has a line through it or not); the print style when switched on, and the 'form length' (ie, the length between perforations of your fanfold paper). These DIP switches should be readily accessible, and not require an initial dismantling job when you buy your printer. The only DIP switch on the Fastext 80 is for auto-linefeed, which is

Figure 2. Picture of skier, by 10-year-old Miranda Hill, dumped by listing 3

A GREAT PACKAGE DEAL!

For serious users of the BBC Computer.

A professional trio which can be integrated to produce an information management system of exceptional power.

1 SCRIBE

THE PROFESSIONAL WORD PROCESSOR

designed for the serious user ■ All operations fully prompted ■ No special knowledge of the computer system necessary ■ Document size NOT limited by computer memory ■ Automatic disc buffering ensures text is moved between disc and computer memory without user intervention ■ Up to 255 pages in a single document ■ 80 column display ■ on screen underline and right justify ■ See it as it will be printed.

SCRIBE comes in a chip with 5 minute fitting instructions, utilities disc and manual.

DISC MACHINES ONLY.

£59.95 + 60p p&p

2 DATABASE

A superb record keeping system with an incredible operating speed. 96 fields per record

■ One record 2 Kb max ■ One field 900 characters max ■ 4000 records per database ■ 16 level conditional search ■ Find any record in 2 secs ■ Wild card search ■ Record match ■ 8 automatic sub indexes ■ Total flexibility of output via report writer with auto write back to any field ■ Maths pack ■ Semi programming language.

Integrates with Scribe to give conditional search with MAIL MERGE and high powered report formatting.

Database is in a chip.

DISC MACHINES ONLY

£49.00 + 60p p&p.

SCRIBE & Database in one chip

£95.00 + 60p p&p.

3 DOUBLE-DOS

Double density disc interface for the BBC computer.

A high capacity database or word processor is enhanced even further with this state of the art disc interface.

The many features include ■ almost 800 Kb of CONTINUOUS file space on a standard 80 track disc drive ■ Automatically read standard Acorn files ■ Compensate for discs formatted in single density ■ Provide up to 159 files IN ONE DIRECTORY ■ Automatically read, write and format double sided drives to appear as one disc surface ■ Allow maximum use of MERTEC Scribe and Database.

Fitting to your computer is made exceptionally safe and reliable by providing connection via a flexible ribbon cable. Full instructions provided.

£109.25 + 90p p&p

located on the back and is easy to alter.

There will probably be only one basic print style available, but it may be obtained in a number of sizes. There are normally three: Pica, Elite and Condensed, each of which should be able to be enlarged, and all these facilities are available on the Fastext 80.

You should also be able to make some print stand out from the rest, apart from using the style changes. The only form available on the Fastext 80 is underlining and this is very slow as it requires an extra pass of the printhead. Other methods are emphasised (double printing the dots on the same line), and double strike (double printing the dots in two passes, with a mini-line-feed between them).

Pin-addressable (bit-image) graphics of some sort are almost universal on modern dot-matrix printers. If your printer does *not* support the normal 'Epson-type' single and double density graphics modes (using the control codes ESC K n1 n2 or ESC L n1 n2) then you are cut off from a lot of published software, and may have either to write your own, or rely on other people. The single density graphics command is implemented on the Fastext 80, but the control code used is ESC*0 n1 n2 – hence most existing software will not run without modifi-

The Smith-Corona Fastext 80 scored 4 out of 10

cation. There are also 'no distortion' plotter graphics, using ESC*5 – this allows the printing of precisely round circles (figure 1). The maximum number of dots per line is 512 – not enough to produce a correctly orientated 'pattern' dump.

The Fastext 80 is not obtrusively noisy. Printers always sound quieter in a shop than in your study, and quieter still when described by salesmen over the phone! You can't expect silence from any impact printer, but the noise should not drive you from the room.

As far as speed is concerned an advertised 80cps (characters per second) usually means about 55cps in average use. Anything slower will be irritating, and even this will be too slow

if you use the printer extensively. The Fastext 80 rates at the low end of acceptable, with an advertised speed of 80cps and a benchmark figure of 54cps.

The manual is an important feature of a printer. If it is incomprehensible, you are prevented from using your printer's capabilities to the full. The Fastext 80's is glossy but uninformative, and badly laid out. Overall this printer seems rather overpriced – if it cost around £150 including VAT, tractor feed and leads, then it might tempt me.

POWERFUL AND SOPHISTICATED YET MENU DRIVEN AND EASY TO USE!
FOR THE AMATEUR AND PROFESSIONAL USER ALIKE!

- * AUTOMATIC DRAWING and SCALING OF AXES WITH OPTIONAL SELF LABELLING FACILITIES, TITLES, etc. (Coarse/Fine Cursor movement).
- * CONFIGURATION ALLOWS DISC DRIVE, FILE NAMES, SCREEN DUMP SELECTION.
- * DATA ENTRY FROM FILE OR KEYBOARD INTO 4 FIELDS. (Range, All or Select Records from File)
- * MINIMUM KEYSTROKES – Extensive use of FUNCTION KEYS
- * COMPREHENSIVE EDIT FACILITIES – MOVE, DELETE, CHANGE, BROWSE
- * SORT (Ascend/Descend) ON ANY FIELD
- * RENAME FIELDS ETC., SAVE CONFIGURATIONS, DEFAULT VALUES
- * SCREEN DUMP – ACCESS OWN ROM, APPEND OWN or SUPPLIED (FOR EPSON)
- * SAVE/LOAD SCREENS
- * TWO COLOUR MODE—CHANGE COLOURS IF REQUIRED
- * TEST/FAMILIARISATION FILES AND FULL INSTRUCTION MANUAL

BEL CHARTS

Up to 3 Fields may be plotted against the 4th as Line Graphs, Bar Charts, Stacked Bar Chart or Histograms. (150 Data Points/Field).

Charts may be plain or 3D and up to 24 Bars can be displayed.

Pie Charts may show the 4 Fields or have up to 10 segments using a special routine.

Bar and Pie Charts can be displayed together.

Plain, solid, line and striped shading.

Negative numbers catered for.

BEL PLOT

Choose Fields/Variables for Vertical and Horizontal Axes. Graphs may be overlayed and there is a Curve Fitting routine which gives the derived equation (up to 7 degree polynomial), plots it and shows the data points. Equations in Y and X and also Parametrics may be entered and plotted.

*CLEAR	Clear all variables including integers.
*EDIT	Enter full screen editor.
*FREE	Display free memory and pseudo variables.
*HELP INFO	Display a screenful of useful system information.
*MEMORY	Display memory contents.
*MERGE	Merge a program in memory with one on disc/cassette.
*MOVE	Move program to run at specified address.
*NEW	As NEW, but can be issued from within a program.
*OFF	Cancel enhanced error handling.
*OLD	As OLD, but can be issued from within a program.
*ON	Auto error handling - enters editor at line in error.
*PACK	Efficient program compactor.
*RECOVER	Intelligently recover bad programs.
*RENUMBER	Allow partial renumbering.
*REPORT	Extended error reporting facility.
*SCREEN	Screen dump to cassette or disc.
*UTIL	Display utilities menu.
*UTIL 1	String search.
*UTIL 2	String search and replace.
*UTIL 3	Move Basic program lines.
*UTIL 4	List procedures and functions.
*UTIL 5	List values of A% to Z%.
*UTIL 6	List numeric variables.
*UTIL 7	List string variables.
*UTIL 8	List names of arrays.
*UTIL 9	Set up range for utilities 1 and 2.

SERIOUS SOFTWARE

FOR THE B.B.C. MICRO

From BEEBUGSOFT

SPELLCHECK II

NOW IN ROM and up to 500% faster.

SPELLCHECK provides an automatic spelling check for letters or documents and is the ideal companion to WORDWISE or VIEW. It is menu driven, easy to use and allows unknown words to be added to the dictionary, ignored or re-spelt. A new corrected copy of the text may then be saved to disc.

SPELLCHECK I (On Disc)

SPELLCHECK I is supplied on two discs with a starting dictionary of 6,000 words. Separate versions are available for WORDWISE and VIEW. (When ordering please specify).

SPELLCHECK II (On Rom)

SPELLCHECK II is a completely new machine code program supplied in Rom. Operation speed is up to 5 times faster than SPELLCHECK I and larger pieces of text may be held in memory. The same version will also check both VIEW and WORDWISE. A dictionary disc is still supplied including 6,000 words, but a data compression technique is used to ensure that well in excess of 17,000 words may be stored on a 100K disc. Ingenious hashing and virtual file access routines have also considerably speeded up the time taken to check text. This sophisticated program is fully 6502 Second Processor compatible and uses the extra memory to further improve word retrieval time.

HELP ROM

What is the second sound parameter...?
How do I turn the cursor off?
Is it FX3 or 4 that...?
Do I need a comma or semi-colon in the PRINT statement?
What logical colour is red?

Give your micro a mainframe utility

Most large mainframe computers have a comprehensive on-screen HELP facility to aid programming, save time and help you out when you get stuck. BEEBUGSOFT's new HELP Rom will give your micro a similar facility.

Just plug it in, and every time you get stuck for a VDU call, a colour code, the parameters for a Basic command or whatever: the HELP Rom will provide an instant answer.

Rather than wade through a book, simply type, for example, *HLP VDU (or just *H VDU) to find out all you need to know about VDU commands - or if you know that it is VDU23 that you want - type *H VDU23.

The HELP Rom uses an ingenious compression technique enabling some 14,000 characters of text to be squashed into an 8K eeprom, and provides help on a vast range of subjects, including the following major areas:

BASIC KEYWORDS
MEMORY ALLOCATION
SCREEN MODES
SOUND
COLOUR
TELETEXT
VDU
COMMANDS
FX CALLS

HELP will not affect the normal *HELP command

SLEUTH

Looking for bugs in your Basic?
Let Sleuth track them down.

Here at long last is the **ULTIMATE DEBUGGING TOOL** for the Basic programmer!

SLEUTH allows you to single step through your Basic program instruction by instruction, watching your screen display as it is built up. Simply press the Space Bar to execute the next instruction. Alternatively you may watch SLEUTH's control screen as you step through your program. (Press Tab to toggle between your own screen and the control screen.) This will show you the next instruction to be executed and allow you to list any part of the program. Also displayed will be the contents of all variables associated with the current instruction and the values of other specified variables. At any time you may alter the values of

any variable or update memory. You can even change the line number of the next instruction to be executed or alter the logic within a program statement. Then simply press the Space Bar to watch the next instruction execute. Breakpoints may also be set up at any position in your program, these allow you to speed to the problem area and then see exactly what's happening. You may even set conditional breakpoints. e.g. Stop IF A%=20. Advanced trace and decelerator facilities are also included. The decelerator allows you to alter the speed at which your program executes, actually as it is running.

SLEUTH is ideal for the novice and expert alike and will prove to be instantly invaluable, saving hours of debugging time. In addition, the single stepping facility makes it a powerful teaching aid.

Major Features of SLEUTH

- **Single Stepping through Basic** - one statement at a time or a block (e.g. procedure) at a time.
- **Dual Screen Operation** - flip between your program screen and SLEUTH's control screen.
- **Breakpoints** - pause your program at any preset line number, or on the state of any variable.
- **Accelerator** - adjust the speed of your program from full speed to freeze frame.
- **Full Feature Control Screen** - monitor and update vital aspects of your program as it runs.
- **Trace** - a sophisticated line trace facility operating when program runs.

Control Screen Features

- Control screen entered at the press of a key.
- Select edit or single-step mode.
- Adjust program run speed (1-100%).
- View the current program line with the current statement highlighted.
- List the whole or any part of your program.
- Alter the next line number to be executed.
- Read and adjust the value of variables in the current statement.
- Read and adjust the values of any other specified variables or array parameters.
- Insert or remove breakpoints and conditional breakpoints.
- Return to the program screen or continue to single-step or to run at any speed.

Vincent Fojut
looks at two
new second
processors,
aimed at
industry and

6809 A USEFUL NUMBER

considerably
cheaper than
comparable
alternatives,
based on the
6809 micro

175

ALTHOUGH second processors based on the 6502 and Z80 have received much attention lately, a third 8-bit family of add-on processors, based on the 6809 micro, have recently become available. This review compares two competing 6809 systems for the BBC micro, and considers how they differ from the alternatives.

The two systems are the Cube Beeb-Flex from Control Universal, and the simply-titled 6809 second processor from Cambridge Microprocessor Systems (CMS). Both offer a surprisingly similar complement of facilities and software support. The major immediate differences are in the packaging of each system.

CMS have squeezed all their hardware onto a single board which is slightly longer than a standard Eurocard. This fits neatly under the lid of the BBC micro's casing, and connects via a short cable directly to the Tube interface. Alternatively, using a longer cable, the card can be mounted in a standard Eurocard rack, and linked to additional boards via its Acorn bus-compatible 64-way indirect connector.

The board is populated with a 6809 central processing unit (CPU) running at 1MHz, a full 64k of RAM, a 4k monitor EPROM (plus space for another 32k of memory) and a couple of 6522 interface chips which act as a link to the Tube. Though not as efficient as a custom-designed Tube ULA (uncommitted logic array) chip, the speed of throughput using the 6522 versatile interface adapters (VIA) is still acceptable.

Power is taken from the Beeb, so you must run your discs from another source if they're not fitted with their own supplies. Also, if your BBC micro already has expansion boards of one sort or another, you may have to mount the second processor externally. However, if your desktop is already cluttered, installing the board internally is a great space-saver and the end result is quite unobtrusive.

Control Universal have adopted an altogether more substantial approach to their packaging. Three separate circuit boards make up the system:

- A 6809 CPU card which houses the processor, 4k monitor EPROM, scratch-pad RAM and a single VIA
- A 64k dynamic RAM card
- A small Tube interface card, holding a second VIA.

The first two boards are standard Eurocards, and are housed in a metal four-slot mini-rack with an integral power-supply, finished in beige to match the Beeb. Two remaining slots are therefore available for future expansion.

The Cube Beeb-Flex uses the same dual VIA approach to connect the system to the BBC micro's Tube interface. Since only one VIA can fit onto the CPU card, another small card is needed to hold the second VIA chip. This can be installed within the Beeb (secured to the underside of its lid), or left to flounder untidily on your desktop.

With the aid of appropriate software, both 6809 systems give the BBC micro user access to the range of software written under Flex, the standard disc operating system for the 6800/6809 family.

The CMS system was supplied for review with a BBC disc holding two important programs. The first allows discs to be formatted to standard Flex requirements and run on BBC hardware. The second program, together with the monitor EPROM on the 6809 card, provides the necessary link soft-

ware for inter-processor communication. Executing the program automatically transfers control to the 6809 monitor – a "CMS >" prompt denoting all is well. With the Control Universal set-up, this linking and formatting software is supplied on a sideways ROM, for permanent installation in the Beeb. Obviously, this latter option is slightly more convenient, providing you have the space for yet another ROM. Typing *FLEX enters the 6809 monitor.

The Cube BeebFlex is made up of three circuit boards

The monitor software is virtually identical on both systems. The range of commands offered is shown in tables 1 and 2 overleaf.

Overall, the Control Universal monitor has a rather unfinished feel to it. For example, I tried dumping the last page of memory (&FF00 – &FFFF) to the screen. Once the end of memory was reached, the dump 'wrapped-around' to low memory (0000 onwards), and would continue to dump *ad infinitum*. Control Universal claims that an improved version of the monitor, which rectifies these oversights, may soon be available. The range of commands is also limited – a command to change register values during the program de-

bugging process would not go amiss.

Flex is probably the most popular disc operating system (DOS) for the 6809. It has established a reputation for elegance, sophistication and user-friendliness. The implementation supplied with both products comes complete with a 6809 macro-assembler and a line-orientated text editor. Documentation for the DOS, assembler and editor is provided in a comprehensive 200-page manual.

The Flex DOS assumes the system on which it is running has at least two disc drives. It has been configured to use the Beeb's disc interface via calls to routines within the Beeb's DFS ROM. I was disappointed by the speed of many disc operations. Creating a Flex system disc (one from which the DOS can be loaded) took approximately six minutes, using a Beeb fitted with Acorn's DFS. It is interesting to note that CMS recommend the Watford DFS as being twice as fast as Acorn's DFS 0.90, but I was, unfortunately, unable to check this. Similarly, those lucky enough to have the new Acorn DNFS should also find disc operations much faster (see George Hill's comments on page 104 of *Acorn User*, September 1984).

With either system monitor in control, Flex is copied into RAM by means of the 'U' command. This initialises the Flex disc operating system. Unlike the range of DFS software for the Beeb, which is all ROM-based, Flex holds virtually all its commands on disc in the 'Utility Command Set' (UCS). One great advantage of this arrangement is that further commands can be appended to the UCS with ease, by adding suitable command files to the system disc. This in no way encroaches on free memory, since the extra commands stay on disc, and are only loaded when required. (To complicate matters, CMS have recently announced that a 16k EPROM is to be made available, holding linking software, formatter and Flex in firmware – eliminating the need to load Flex from disc on startup.)

Memory requirements can be seen from the system memory map (figure 1). An uninterrupted 48k of RAM is normally available to the user, but once a language interpreter/compiler is loaded into this area, the amount of free memory is reduced.

Undeniably, the range of software available under Flex is not as extensive as that for CP/M, especially in the area of commercial business applications. However, there is still a wide variety of sophisticated programs and languages accessible to the Flex user.

Both companies are aiming the board predominantly towards the pro-

The CMS 6809 second processor squeezes all the hardware onto a single board

Command Meaning

U	Boot a Flex system disc
K	Fill memory area with specified byte
C	Perform cyclic redundancy check
M	Memory examine/modify
G	Execute program at specified address
N	Execute program at (current program counter + 1)
Q	Test memory area
D	Dump memory to screen/printer
L	Load 6809 memory from 6502
S	Save 6809 memory to 6502
O	Branch offset calculator
F	Flex warm start

Table 1. CMS 6809 monitor commands

fessional engineering market, as a low-cost development system for dedicated applications. CMS offer the 6809 card in a compatible single-board controller (SBC) format, for use in final application hardware. The SBC can also accept low-power CMOS RAM, and has facilities for battery backup. Similarly, the two main boards in Control Universal's BeebFlex are standard Eurocards from the extensive range manufactured by the company, which are mostly available in anything from fully-assembled form, right down to bare boards. Therefore, using either 6809 system, applications can be developed with the BBC micro/second processor combination, then transferred to identical dedicated hardware.

Software development is by no means limited to the 6809. A wide range of cross-assemblers and disassemblers are available for most popular 8-bit CPUs (including the 6800, Z80/8080 and 6502 families), and even bigger beasts like the 16-bit 68000 are catered for.

FLEX 0.1

Table 2. CubeFlex 6809 monitor commands

Users of the 6502 are particularly well-blessed – in addition to the above tools, a 6502 machine simulator is available, to allow testing/debugging of 6502 code, using the 6809. There is even a package to perform 6502 to 6809 machine-code translation.

The 6809 is generally considered to be the most elegant and powerful of all 8-bit CPUs. To solve a given software problem, the 6809 typically takes fewer instructions, less memory, and is appreciably faster than other 8-bit processors, when running at comparable clock rates. However, since the 6809 in each system runs at 1MHz, as opposed to the 3MHz 65C02 and 6MHz Z80B in Acorn's second processors, the 6809 add-ons do not stand out in terms of speed. Faster versions of the 6809 are available, and it's rather a shame that neither company opted for 2MHz operation – then we might really have appreciated the impressive speed performance the 6809 is capable of.

Nonetheless, the processor is cer-

Our family now run faster on the Tube®

The industry standard MACRO ASSEMBLER - DEBUGGER - EDITOR.

Used entirely by Island Logic and System to write 90K of m/c for The Music System! Version 2 has been significantly enhanced to include local labels, any number of output files, enhanced arithmetic expressions. With a SECOND PROCESSOR there is an 80 column version of the powerful ADE macro EDITOR and the option to assemble to memory for a really fast assembly.

£60 inc vat Please specify 40T or 80T utility disc

The ASSEMBLER that professional software writers use.

All the superb features of the ADE macro assembler version 2.

£35 inc vat Please specify 40T or 80T utility disc

The most comprehensive and cost effective of all DEBUGGING / DISC UTILITY ROMs.

AID at last!

Assembler Interactive Debug for the
BBC Micro with DUALSCREEN

STOP PRESS . . . AID receives
superb review . . . see below

AID has now established itself as the finest machine code monitor ROM for the BEEB. With its unique DUALSCREEN operation so far in advance of the competition, AID puts unprecedented debugging power into your hands. No other monitor can begin to tackle machine code graphics – something AID takes effortlessly in its stride! Beginner or expert, you cannot afford to be without DUALSCREEN AID.

Read what "The Micro User" thinks . . .

“My immediate impression of AID was that it was a very professional product . . . AID offers additional features far in advance of other monitors . . . I found it easy to use, particularly as the user guide is very thorough and accurate . . . I wish I had something like this when I first started dabbling in machine code . . . The last facet I explored was the DUALSCREEN facility, which is perhaps the pearl of the system . . . In conclusion, AID seems a must for the serious machine code programmer and a very useful learning aid for the novice. It is a highly professional product in every way and could prove to be the standard by which others are compared.”

"The Micro User" January 1984

The most advanced machine code AID for the BBC Micro

tainly no slowcoach, even at 1MHz, and irrespective of speed, the sophistication of its instruction set cannot be ignored. With a copious set of registers, a wealth of true 16-bit operations and an extensive range of addressing modes, even assembly language programming on the 6809 seems rather high-level!

The 6809's advanced architecture has also allowed the efficient implementation of many popular high-level languages. The software development engineer will find a great variety of languages running under the Flex/6809 combination, offering an environment to suit most applications. There are the old stalwarts of computing such as Basic, Cobol and Fortran, and also more modern, structured languages such as Pascal, Forth, C, BCPL and PL/9. This last is a true machine-code compiler, written specifically for the 6809, which offers the ease of high-level programming without sacrificing the speed and hardware-intimacy of assembler. Furthermore, many of the languages running on the 6809, such as PL/9 and certain versions of Pascal, allow programs to be transferred to ROM/EPROM for use in dedicated applications or stand-alone systems.

The 6809 macro-assembler provided with the Flex package is an excellent programming tool. A measure of its versatility is that the cross-assemblers available under Flex, for other CPUs, are actually implemented as 'macro sets' for use on the very same assembler. This saves having to buy a completely new assembler for each different processor you want to program.

The other major program provided with the Flex system, the Text Editor, is a reasonable, but old-fashioned, line-orientated package. It lacks some of the convenience of a full-screen editor, but it is perfectly adequate for creating assembler program source files etc.

The VAT-inclusive price of a 6809-based second processor system with cable, link/formatter software and Flex, comes to around £400 for the CMS version, and about £490 for the cased and powered Cube BeebFlex. This clearly makes either 6809 option more expensive than other extensions based on the 6502 and Z80. However, though there is obviously some overlap, each system addresses distinct sectors: the Z80 add-on for business, the 6502 variant for sophisticated home/educational use, and the 6809 version for industrial/technical development.

Which of the two 6809 second processors is better? The CMS system is compact, relatively low-cost, and if you don't plan further expansion, this would seem to be a sensible choice. If you do want to expand, or don't have the space

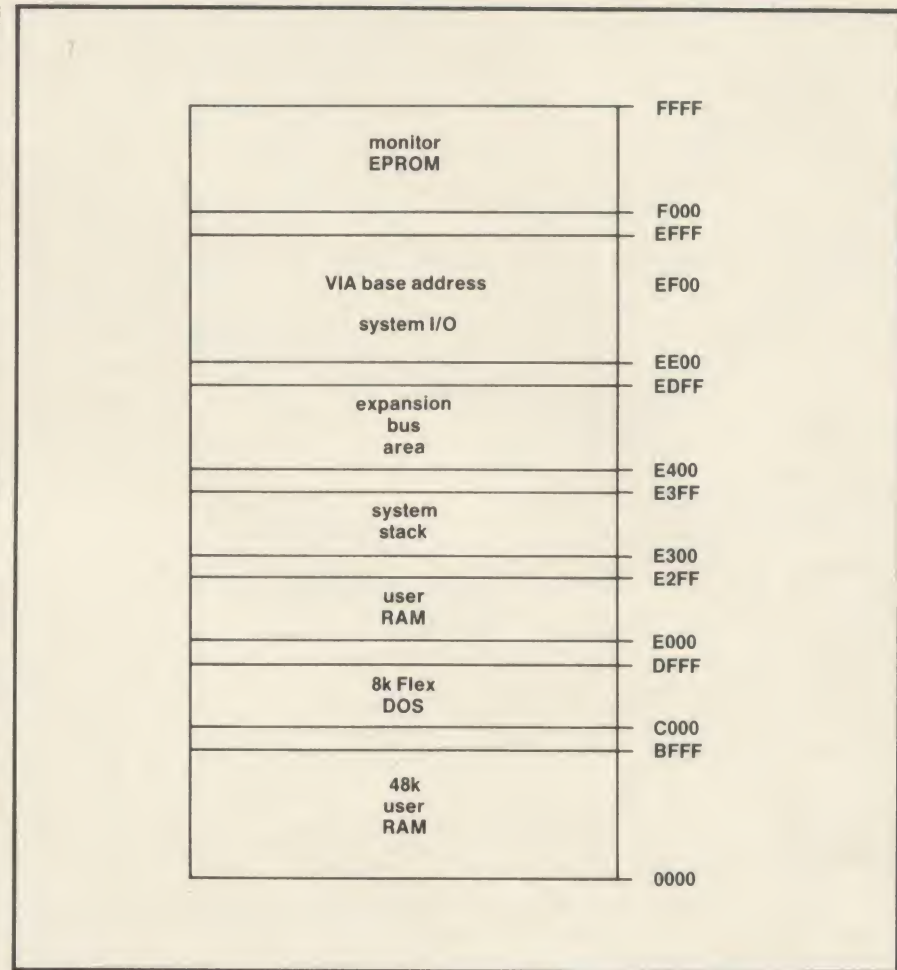

Figure 1. 6809/Flex system memory map

and surplus power for another add-on, Control Universal's package is rugged, self-powered, and has two spare expansion slots.

If you envisage really extensive expansion, it's worth remembering that either system can be housed in a much larger rack. Since both use Acorn bus-compatible connectors, cards from either company (and others) could be mixed on the same system. Control Universal's range of Eurocards is very wide, offering high-resolution colour graphics, disc controllers, analogue and digital I/O, EPROM programmers, etc. CMS are rapidly developing a similar range of expansion cards.

One of the languages you cannot run on the 6809 add-on is BBC Basic, which is available in forms suitable for both the 6502 and Z80 second processors. However, the advantages far outweigh this shortcoming. What the 6809 systems offer is an 8-bit processor which is second to none in terms of programming elegance, a sophisticated and user-friendly disc operating system, and a wide range of powerful programming languages and development tools.

Undoubtedly, for those with the appropriate Beeb hardware, either

product offers a 6809/Flex system at considerably less cost than comparative alternatives. I can see both configurations proving very popular with industry, higher education, and even a few well-to-do hobbyists.

TOP FORM MONITORS

Harry Sinclair looks at 10 machine code monitors and gives them all a good end of term report

WHAT is a machine code monitor? Let's get one possible cause of confusion out of the way – it's got nothing to do with posh TV sets which cost a fortune but won't let you watch *Dallas*.

The monitors covered here are pieces of firmware – programs which are not designed to be modified by the user. They are chip-based and plug into one of the sideways ROM sockets in the BBC. Only *Starmon* is available for the Electron.

A monitor allows you to do three basic things: inspect memory, alter memory and execute machine code in a controlled manner. The ten products perform these tasks to a high standard – there isn't a bad one among them. Some are easier to use than others, and some perform particular tasks better, but overall I would recommend any of them.

What I'll do is highlight the good points and leave you to decide. The fact that a monitor is not mentioned under a particular task heading doesn't have great significance – it just means that, in my opinion, the ones named do a better or more interesting job.

The adverts might lead you to believe there's not a great deal of difference between monitors – not surprising when they're supposed to perform the same tasks. What is striking, however, is just how different their approaches are.

An important fact to bear in mind is that, other than *Toolstar* which operates as a service ROM, all are languages (albeit simple ones) in their own right, with a vocabulary and syntax. You won't have to master a language as complex as Basic, because most use single letter commands and you don't have to program, but you will have to learn how to use them – and none is particularly user-friendly.

Inspect Memory

There are two conventional ways of displaying memory – hex/ASCII dump and disassembly. (ASCII, by the way, stands for American Standard Code for Information Interchange, a system designed to standardise the representation of data and so ease the passage of information between machines of different manufacture.)

The hex/ASCII dump lists memory from a point set by you, usually a

'Spy2': good monitor and powerful set of disc-related commands

screenful at a time. The layout is normally lines of the contents of eight consecutive locations, printed in hex notation. On the right of the screen are printed the equivalent ASCII characters. Some monitors, like *Spy2*, just give one display and allow you to toggle between hex and ASCII. No attempt is made to represent control codes 0 to 31, or those higher than 127. A full stop is usually shown instead.

Disassembly shows the contents of memory interpreted as program code and displayed in assembler mnemonics – eg, LDA #&2E:JSR &FFEE. Any section of memory containing values which are not valid op-codes is highlighted. This generally means you are looking at data rather than code.

All these monitors will disassemble adequately, but by far the best for this is

Mach1. In addition to standard disassembly it provides the marvellous facility of auto-disassembly. This automatically labels all subroutines, code to which a JMP or a branch is made, and memory locations which are written to or read from. All OS calls, vectors, Fred, Jim, Sheila etc, are labelled. It also enables you to give any location or subroutine a name and it displays that name wherever it is referenced. You can define any byte or section of bytes as code or several types of data and this will determine how it is displayed. If a piece of object code is designed to reside and run in an awkward location, such as in ROM or below &C00, you can load it or move it into a more accessible position in RAM and use the offset facility. This will disassemble the code as if it were in its proper place while still allowing access to it. You can even insert comments into the display. Information on these names, definitions and comments is held in compact tables and can be saved separately, so you can have a complete disassembly without saving either source or object code. It also means you can pass on that complete disassembly to someone else who owns a copy of *Mach1* and the object code without infringing copyright. Gnomonica hopes to build up a library of disassemblies for its customers. The number of facilities offered by *Mach1* for disassembly is so large that the whole of this article could be devoted to them and still not cover them fully.

Kmon provides a cut-down version of the above, without auto-disassembly

'Debug': designed with the 6502 second processor in mind

and some other refinements. An honourable mention goes to *Spy2* which has an excellent routine, XLST, to differentiate between data and code and display them accordingly.

All the monitors except *Aid* allow you to inspect all memory, including the paged memory between &8000 and &BFFF where Basic normally resides, so you can look at any other ROM in the machine. Strangely, *Aid* only allows you to inspect itself so you can't even have a look at Basic.

Page 185 ►

CLARES No1 IN UTILITY SOFTWARE!

ENHANCED

**BETA-BASE £25 DISC
8 GREAT FEATURES**

WHAT IS A DATABASE?

It is a **FILE** which contains **RECORDS**. Records consist of a number of **FIELDS** containing the information—an analogy can be drawn with a card index in which a box of cards is the file. Each card is a record and each line on the card is a field.

SPECIFICATION

- 1) Random Access—disc based, single or dual drives
- 2) File Size—99K (40 track), 199K (80 track) —65,000 + records
- 3) Record Size—up to 2048 characters and 200 fields
- 4) Field Size—up to 254 characters with complete line scanning
- 5) Access any record using Primary Key in 2 seconds
- 6) Holds—1200 NAMES AND ADDRESS records on 100K disk
- 7) Search—500 records on 5 fields in 60 seconds
- 8) Sort—500 records on 3 fields in 60 seconds

SYSTEM FEATURES

- **CALCULATE**—using any valid expression and store results
- **POWERFUL PRINTOUT OPTION**—Eliminates need for separate mailing program, Parallel/Serial Printout allows setting of printer control codes, line spacing, tabulation, Headings etc, plus label printing with horizontal and vertical tab control.
- **REDEFINE**—Titles, field widths, number of fields, number of records etc.
- **TRANSFER**—Records from one file to another.
- **SEARCH LISTS**—Allow creation of sub-Databases within main Database.

NEW *

- * **GLOBALENTY** enables repetitive data to be typed in once and placed in as many records as required. Can also be used with a search list to provide a powerful global edit/update facility that will save hours of typing.
- * **SPOOLER** enables you to create spooled files that are compatible with Wordwise, View and other word processors. You can therefore present your data within a document or in varying formats etc. The spooler program will allow to format your spooled file in the same way as the print out option. You can therefore have headings, columns, titles, numbers etc.
- * **INPUT** is a routine included on the disc which will allow you to write utilities for accessing your data and tailored specifically to your needs.
- * **TUBE** compatible with the 6502 second processor.
- * Comprehensive manual and tutorial. All timings and sizes are relative to ACORN DFS. Compatible with ACORN DFS, WATFORD 1.3 and latest AMCOM DFS SERIES B.
- * **ORIGINAL USERS** send your disc plus £3 for up grade.

REPLICA II: £12.00.

DISC

The original REPLICA set a very high standard so the specification we set our chief programmer included some impossible features. In fact ACORN state that some of the things that we have done are impossible, it just took us longer that's all. REPLICA II transfers most cassette based programs to disk, even more than REPLICA. When you buy disk drives you do not have to throw away expensive cassette based programs.

REPLICA II transfers 'LOCKED' programs, programs loading as files, programs that load below &EOO, those with up to 6 sections and those up to &6E in length eg adventure programs. No waiting for 6 minutes whilst adventure programs load.

REPLICA II is very easy to use. The user enters a name, how many sections and whether CHAIN, RUN or *LOAD to load the first section. Press play and let the program do the rest, even a menu.

Think how much it will cost you to buy just 1 disk version of your favourite program—REPLICA II which will hold up to 16 programs, limited only by the disk capacity.

FX 80 PRINTER DRIVER £12.00

PRINTER DRIVER FOR EPSON FX80 AND VIEW

Multi-page driver with print menu allowing the setting of global (document wide) printer functions at printer initialisation.

The print menu program contains a sophisticated character generator which allows the construction of 95 user defined characters which are then accessible from VIEW via a highlight option.

Supplied on disc with comprehensive user manual.

NEW

DISCDEX: £15.00 DISC

- Catalogues all your discs quickly and easily.
- Room to store four thousand titles.
- Quick search and load option.
- Compatible with single or dual drives.
- Extensive print options for catalogue and disc labels.
- Update and delete options.
- Supplied with stick on labels to number your discs and a supply of labels for printing your own disc labels.

DISCDEX is the answer to a disc users nightmare. How many times have you had to wade through your discs looking for the file that you know is there somewhere? Now with DISCDEX those days are gone.

DISCDEX will catalogue all your discs and store them in alphabetic order. In addition to the very useful search and load facility DISCDEX will also print out a full catalogue in alphabetic or disc order. Even more useful is the ability to print disc labels for sticking on the disc or the jacket.

DISCDEX is only suitable for discs with 31 file names as in the standard ACORN system. It is not suitable for double density interfaces.

Send for detailed newsletter.
All prices inclusive of VAT & Carriage—

Open 9—5pm Monday—Friday

NEW

ONESHOT: £12.00 DISC

- Full feature trace utility.
- Single step through BASIC program or halt at user determined interval.
- Print line number prior to execution.
- Obey fixed instructions before executing a line.
- Trace window allows screen to be seen whilst tracing execution.
- "Printer only" will force trace output to a printer allowing full screen display.
- Ability to dynamically alter control of ONESHOT.
- ONESHOT can be configured to run in any area of memory.

ONESHOT is a 1.25kb machine code program which gives the user several powerful aids in debugging BASIC programs. These include the ability to SINGLE STEP through the BASIC code of the target program, stopping the processing at specified points and comprehensive trace functions of the variables used by the target program.

A very powerful option allows the user to enter a command string into function key 0 and instruct ONESHOT to obey this command BEFORE each line is executed e.g. *KEY0 PRINT X%; M will print the value of X% before executing each line. This is a very simple example and it is possible to do much more complex things including printing the value of a variable only when it changes or when it reaches a certain value or falls within a certain range. This option can also be used to dynamically alter ONESHOT as it is working. The power of this option is only limited by the users ingenuity. In addition to ONESHOT the disc also contains 3 very useful function key routines. The first will search for any DEFPROC or DEFFN and print the line numbers in which they appear together with the name of the procedure or function. The second will search for a specific procedure or function and print the line numbers containing it. The third routine will print out every active variable together with its present value. ONESHOT is not compatible with double density interfaces.

NEW

FUN HOUSE: £10.00 DISC

FUN HOUSE is a highly original suite of educational programs suitable for ages 3 to 13. The program is designed to encourage children to spell words which relate to objects found around the home. Animation and music are used to good effect and some highly original ideas are incorporated. Each room exercise is terminated with a warning item e.g. the lounge finishes with 'FIRE' which goes on to engulf the whole lounge. Tests with a newly hired 4 year old resulted in us having to prise him away from the keyboard after 2 hours. In that time he had gone from never having used a keyboard to finding the location of all the keys very quickly and entering the correct answer. He had thus started on the path to learning spelling and familiarised himself with the keyboard including the use of DELETE to correct his mistakes. Can you afford not to give your children the same start?

FUN HOUSE is not compatible with double density interfaces.

Draw with the BBC micro and show the true potential of your machine

Fill shapes in one of 23 colours (Mode 1)
Draw points, lines, rectangles ellipses and circles
Smooth curves
Wire frame diagrams
Hidden line removal
Draw in perspective
Measure scaled distances
Ekta sketch lines, Half tone facility
Mirror images
Repeat images, SS, enlarged, reduced, stretched
Actual colour displayed
Store up to 10 ellipses or circles in memory
Redraw any one of these at cursor position
Change any actual colour for one of 8 others
Clear screen, load screen, save screen
Print characters or numbers at any pixel point
Error messages for incorrect input
Fully comprehensive manual

35¢ 496 • □ ••• 3

This programme has been purpose designed by professional Graphic Designers for simplicity and ease of use, and is undoubtedly the most versatile drawing programme on the market at this time. There is no need to input any numerical data, as all judgements are made visually. The BBC Micro is the finest drawing machine in its price range. Find out what it can do.

The A. B. Designs drawing programme costs only £36 for over 70 functions (model B). New AB2 Program, available on disc (price £61) and cassette (price £51). When ordering send Cheque/PO and VAT at 15%. Please include phone no. with all correspondence. For further information send SAE and phone no. to A. B. Designs, 81 Sutton Common Road, Sutton, Surrey. 01.644 6643 (closed all day Thursday).

DEFINE A MULTICOLOUR SPRITE CREATOR, EDITOR & ANIMATION CONTROLLER FOR THE BBC B COMPUTER

DEFINE is a suite of programs providing all the sprite and animation facilities needed to produce high speed arcade type games using your own multicoloured characters (sprites).

The package is extremely easy to use, every command being made with a lightpen, or joystick, directly from the screen. Real size and enlarged views of your sprites are continuously updated while you define or edit them and you may test animation sequences in the editor package as you go along. New sprites may be created by editing old versions and the number of sprites you may define is unlimited. Sprites may be any size up to 12×16 pixels and each pixel may have any of the 16 standard mode2 colours. The software needed to animate your sprites is provided as a separate program, which you can merge into your own BASIC, or machine code, program, allowing high resolution positioning with fast, simple commands. The number of sprites, or clones, you may have at any one time is unlimited (except by computer memory) and the speed of movement can be very fast if desired — over 400 sprites per second may be printed from BASIC, or 700 per second from machine code. Of course, you may link sprites in your own programs, producing giant sprites, or sub-animation. A 24 page handbook is supplied as well as a BASIC example program.

Debug takes the opposite tack and lets you look at everything but *Debug*, which it rather glumly informs you is not open to inspection for copyright reasons. Happily, none of the others has any such scruples and all will let you look at *Debug* as well.

For plutocrats with the 6502 second processor, *Starmon*, *Mach1* and *Debug* will also disassemble code over the Tube. I'm told the latest *Spy2* works with the second processor, having separate screens for each side of the Tube. However, only *Mach1* supports the mnemonics for the entire op-codes on the 65C02, and for disassembly only.

The authors of *Spy2* and *Toolstar* take the reasonable view that discs are part of available on-line memory and have provided facilities for their inspection and modification, as well as useful commands for formatting, verifying, etc. *Spy2* is particularly well heeled with disc commands. *Debug* has some suggestions on using OSWORD &7F to enable disc editing but this is rather a do-it-yourself job.

Another aspect of memory inspection is searching and these ROMs do this in one form or another. With the exception of *Debug* all will allow a search for a pattern of bytes, and all except *Kmon* provide a search for a string. *Debug*, *Mach1* and *Gremlin* let you input what you want to look for in the form of assembler mnemonics. Very usefully, *Debug* has provision for 'wildcards' in this search using '*', to look for something like LDA (**), Y CMP #20 BEQ #**. *Spy2* lets you search any disc as well. As with memory inspection, searches can be carried out in the paged ROM area although the restrictions mentioned above still apply with *Aid* and *Debug*. Again *Debug*, *Starmon*, *Mach1* and the latest *Spy2* will work in the 6502 second processor.

Output to printer and/or file is possible with all the ROMs. *Exmon* and *Gremlin* have a routine which is a life-saver. If you have object code but have lost the source code (as I regularly do) or never had it, you can spool the disassembly to disc or tape. The file produced can have a header such as AUTO so that EXECing it re-creates the source code and saves a lot of typing.

Alter memory

Byte and string insertion, the entry of code, and the alteration of the 6502's registers come under this heading. Let's get the simpler ones out of the way. All these monitors permit insertion of individual bytes and filling blocks of memory with byte patterns for those developing ROM software. All enable the user to shift and compare blocks of memory and there is little to choose between them.

SUPPLIERS AND PRICES

Starmon	£27.50 BBC £22.50 Electron	1.2	Slogger Software, 215 Beacon Road, Chatham, Kent
Toolstar	£34.00	1.77	Pace Software Supplies, 92 New Cross Street, Bradford BD5 8BS

185

The relocation of program code is a thorny subject, but five of these ROMs provide routines to make it easier – *Aid*, *Exmon*, *Kmon*, *Spy2* and *Mach1*. The code is modified to enable it to run in its new location, although if you have data mixed in you could get some funny results. Still, it teaches good programming habits – like don't mix code and data, and don't lose source code.

Mach1 also has a 'kill' routine which will remove a specified section of object code from a program and then shuffle up the rest to close the gap. Forward and backward references are

service rather than a language ROM, this has to be done from Basic using A%, X% and Y%, with C% used to control the carry flag. *Kmon* loads the registers from zero page before executing a routine rather than by direct editing. With *Mach1* it would be necessary to write and execute a small routine to set the registers first and so it's not as flexible as the others in this respect. It isn't possible to alter directly the stack pointer on these three ROMs either.

Although assembler statements can be entered under control of five of these monitors, as stated above, writing programs of any length or complexity while not in Basic is only really practicable with three – *Gremlin*, *Kmon* and *Mach1* – because of the problem of forward references: single pass assemblers do not like undefined variables. *Kmon* and *Mach1* in some ways make an easier job of it. *Kmon* provides line numbers and decent editing. You can mess about with the source code (stored in compacted form) as much as you like. Listing is just like Basic, but if you want to insert an extra line, the editor inserts it and rennumbers later lines. Deleting code operates in a similar fashion. When you've finished, just press '@' and the code is assembled. Saving or loading source code is simple as well.

Mach1 doesn't actually generate any source code, but still has facilities for labelling, commenting etc. The *Gremlin* manual recommends using a word-processor or text editor for generating source code which is then EXECed under *Gremlin*'s control in the same way that Basic would handle it, ie, using two passes. The advantage of using these ROMs rather than Basic to

'Exmon': good all-rounder. Version 11 has graphics capabilities

modified automatically. There is a corresponding 'insert' routine to allow new sections of object code to be added within a program.

String insertion is allowed by all but *Aid*, although it's somewhat messy with *Kmon*.

All except *Aid*, *Starmon*, *Toolstar* and *Spy2* have some sort of assembly facility to let you enter data as assembler statements – more of this later.

Altering the A, X and Y registers is a standard provision. Since *Toolstar* is a

IMPROVE YOUR BRIDGE PLAY

A program that presents hands similar to newspapers and mags. Each hand illustrates a point in play or defence. No bidding to worry about. At the end of each hand the computer tells you how many mistakes you have made and sums up the hand. You may see all four hands and the solution before starting play if you wish. All hands are predetermined. Go back to a hand at any time. No running backwards and forwards of cassette or disc. A grand slam with only 5 pts, or not making a trick with 33 pts. Interested?

Send cheque or p.o. to

V. Milburn, 61 Hainault Road, Chigwell, Essex IG7 5DH.

At present for BBC mod B only. Program 1 for intermediate players. Program 2 for not quite beginners. Cassette £7.95 P&P included. 5.25 disc £9.95 state 40/80 track.

Please state which program required.

Other micro owners please write, we would like to know if there is a demand.

BBC POOLS PREDICTOR

WITH 11,000 MATCH DATABASE

Now in its 3rd successful season, Mayday Software's Pools Predictor has been made even more powerful with a new and unique 11,000 match database. Seven separate forecasting techniques have been combined to give you the best forecasts yet. And, just as easy to use, is our new Racing Analyser. This uses the racecard from your daily paper to analyse any horse race—and it's yours for no extra charge!

EPROM PROGRAMMER for the BBC micro

An exceptionally versatile unit, programs EEPROMs and EPROMs from 2K to 32K.

Powerful, easy to use software in a sideways ROM. Features full screen data editor, files, and softkeys.

Professionally designed hardware ensures reliable and safe programming, also detects badly socketed EPROMs.

Soundly constructed in a convenient flip-top box which protects unit when not in use. Supplied with a comprehensive manual.

£95 (excl VAT, free P&P)

2 year guarantee. Detailed information on request

Control Telemetry of London
Unit 11, Burmarsh, Marsden St,
London NW5 3JA Tel: 01-482 2177

assemble is that they have a wide range of pseudo-ops available, although none supports macros.

Executing code

A tricky area this. All allow controlled execution of code. *Toolstar* has break handling facilities and in some ways is very flexible since the code is CALLED from Basic and all Basic's facilities are accessible, such as changing mode, colour, etc. It doesn't allow single stepping and is not really on a par with the others. To be fair to Pace this ROM is a general utility and was not designed as a full scale, dedicated monitor.

The rest fall into two groups – those that permit controlled execution of graphics routines and those that don't. The big difficulty is the fact that the 'front panel' displays are usually fixed in mode 7. *Beebmon* and *Spy2* for instance won't change mode even if you execute some code which should make them do it. All the monitors will allow the controlled execution of graphics code, you just can't see what's going on unless it's in mode 7! Before you change mode, *Mach1* and *Kmon* require you to shift their tables into an area of RAM where they will be safe.

Since code execution is such an important function, the table below shows what I consider to be the main characteristics of each of the ROMs.

What they offer

Breakpoints enable the user to stop a piece of code at a predetermined point

and look at the 6502's registers etc, for debugging, and I don't think you would find yourself short of them with any of these monitors. Code is usually tested one section at a time so you can get away with just one if you try. I've used the definitions 'ghost' or 'real' in a slightly unusual, but I think more accurate, way in the table. The type of breakpoint is perhaps only significant if you're doing one of two things. First, running a piece of self-altering code, where the first section operates on an apparent jumble of data, EORing it etc, to eventually produce the second section and then branches to it. You may want to produce this type of code to protect your software. Inserting a real breakpoint (zero byte) into the second section before operations are carried out will obviously produce the wrong result. The second use is to allow breakpoints in ROM. This is what *Beebmon* does.

Two monitors, *Beebmon* and *Starmon*, offer the impressive facility of conditional breakpoints, although in a slightly different manner.

As well as providing simple breakpoints, *Starmon* allows the user to specify that the BRK should occur only if certain conditions are true. Up to two conditions are permitted and they can be linked by AND or OR. For instance, you could set a break at location &2042 which will be actioned only when, say, ?&70>=24 and ?&3060<=96. Very clever. In addition you can set a trace of locations in which you are particularly interested so that they are displayed along with the registers at each break-

point or each step when single stepping.

Beebmon offers a different sort of conditionality. Instead of just setting a breakpoint at a specific location, you can also cause one to occur when a particular byte is written to or read from, or when one of the A, X or Y registers contains a certain value. This is powerful stuff, since the breakpoint can occur anywhere. When it does, the program counter, the disassembled instruction at that point, and the contents of the registers are displayed, together with the breakpoint number. Even more impressive is that if you've set a BRK to occur, say when &258 is written to, it doesn't just happen when the instruction STA &258 is about to be actioned, but also when the instruction is something like STA &190,Y where Y=&C8, or even with STA (&76),Y. The address counts, not how it's expressed.

Beebmon is also the only monitor reviewed which permits breakpoints to be set in any sideways ROM.

Single stepping is allowed by all except *Kmon* in RAM and all except *Kmon* and *Aid* in ROM.

Executing calls to sideways ROMs can be done with any except *Aid* and *Spy2*, although this can sometimes have unexpected results if the called routine accesses memory locations used by the calling monitor. *Aid* has an interesting call facility in reverse, as it were. It's possible to run a program which is a mixture of Basic and machine code, and vector the call to the code through *Aid*, even if the call is passing parameters. If required, *Aid*

MAIN ATTRIBUTES

	Aid	Beebmon	Debug	Exmon	Gremlin	Kmon	Mach1	Spy2	Starmon	Toolstar
Number of breakpoints	12	8	8	5	8	10	N/A ^a	8	1	N/A ^a
Type of brkpt – ghost or real *	R	G	R	R	R	R	G	R	R	R
Conditional brkpts?		●							●	
Brkpts in ROM?		●					● ^b			
Single step	●	●	●	●	●		●	●	●	
Single step sideways ROM †		●	●	●	●		●	●	●	
Execute S/W ROM routines †		●	●	●	●	●	●		●	
Limit debug area		●	●		●		●	●		
Change mode	●		●		●	● ^c	● ^c			●

Notes: * With 'real' brkpts the instruction BRK (00) is actually put into the program although the original contents of the location are saved for later re-insertion (except *Toolstar*). 'Ghost' brkpts do not alter the code.

^a With *Mach1* labels can act as brkpts so the number is limited only by number of labels you define. With *Toolstar* you have to insert BRK into the code yourself, but there is no limit to the number you can insert.

• Not in sideways ROM, only between current &8000 and &FFFF.

† There is a possibility of conflict with some of these ROMs if the sideways ROM routine being executed or single stepped accesses locations, particularly zero page, which are also being used by the controlling monitor.

^c The default position for the user tables for these ROMs starts at &5000 and this will need to be changed before changing mode to keep them below HIMEM, otherwise they will be overwritten by screen memory.

CHORD TUTORS

COMPUTER PROGRAMS

BBC-A/B (32K) ELECTRON SPECTRUM (48K)

DISPLAY CHORD SHAPES FOR GUITAR FINGER POSITIONS FOR KEYBOARDS

GUITAR CHORD TUTOR

- ★ Displays 144 chord shapes with finger positions, silent strings, and barres.
- ★ Large display suitable for group teaching and individual practice
- ★ Chord progressions in memory
- ★ Replay memory
- ★ Sound ON/OFF to play chord notes
- ★ Tuning notes for open strings

KEYBOARD CHORD TUTOR

- ★ Displays finger positions for 144 chords and their inversions.
- ★ Displays major and minor scales
- ★ All the features of the GUITAR CHORD TUTOR except tuning notes.

£14.95 each including postage & packing. Cassette only, transferable to disc.

State clearly GUITAR or KEYBOARD and Microcomputer

Formerly trading as Computer Link U.K.

will preserve the program's screen, no matter what mode it was in, allow you all the monitor's debugging facilities, using *Aid*'s own mode 7 screen and the program screen, and finally return you to the correct place in the Basic program with the program screen intact.

This dual screen feature is a cracker. After entering *Aid*, you can set up another screen in any mode, issuing whatever VDU commands to it you like. If you have a machine code graphics routine you wish to test, you can single step through it or run it with breakpoints etc, and *Aid* will switch between the two screens without corrupting either. *Aid*'s use of zero page is transparent and doesn't interfere with any use of the same locations. It's a very impressive piece of work. As with all good things, there is a price to pay. In this case, when 'dual screen' is operative *Aid* needs six pages (1.5k) of RAM at or above &E00 to store its own screen data but, unless you have some long graphics routines in the 20k modes, this shouldn't prove too inconvenient.

Beebmon not only allows calls to routines in sideways ROM, but can run the whole ROM. It's possible, say, to take control of Basic – loading programs, listing them and even running them. All the breakpoint facilities, etc, are available while doing this. It also allows screen output from the Basic program on its own mode 7 display area.

Being able to limit the debug area is useful, particularly for single stepping. You don't want to have to single step all the way through subroutines that are already debugged, or through OS calls. The five monitors that allow this do so either by letting you define the areas you don't want to look at, or by letting you execute JSRs in one step.

'Gremlin': best all-rounder with a nice spread of uses

The final item in the table relates to mode changing when debugging graphics routines not in mode 7. I have already described some of the facilities offered by *Aid*, which sets the standard in this area, and only *Gremlin* comes anywhere near. It accepts the command 'MODE', and if a 20-column mode is selected or the status display shown,

the whole screen is available for your routines, single stepped or CALLED. *Gremlin* does have the advantage of requiring no additional memory to do this but the disadvantage of not having a status display, although this can be output to spool file or printer. The others that permit mode changing will write their status display all over your graphics if you single step or hit a breakpoint.

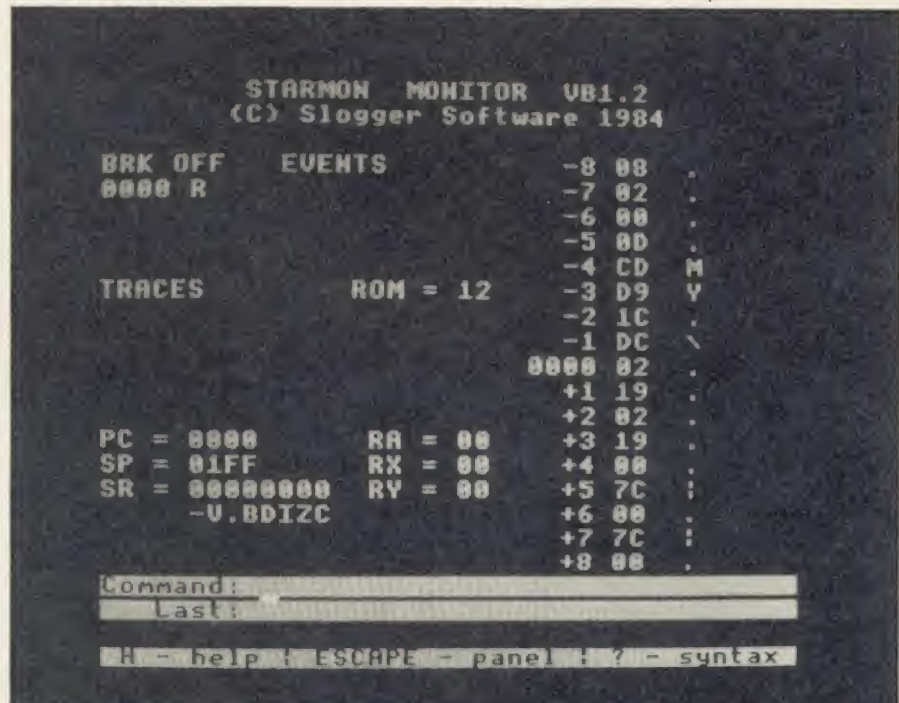

Conclusions

This article covers only the things I consider very important, since I couldn't hope to deal with every aspect of each monitor. I've left out a whole range of topics, from expression evaluation to memory usage. Which one is best for

the OS. It's also a very good monitor.

If you are heavily into m/c graphics, have a look at *Aid* with its lovely dual screen. *Gremlin* has a very nice spread of uses from graphics through assembly and disassembly, and is possibly the best all-rounder, if a little more complex than most to use. *Exmon* is another all-rounder but without the graphics capabilities or the full-scale assembler. *Debug* has many nice facilities, a low profile with no front panel display, and was designed with the second processor very much in mind.

Beebmon has a bright, almost gaudy, front panel and a novel design. If setting all sorts of clever breakpoints in RAM or ROM is your thing, this is the one. It's also the cheapest.

'Starmon': a mode 6 display ensures that Starmon will work on the Electron as well as the Beeb

you will depend on what you want it for. No one monitor offers everything, though all are good.

If you have an Electron the choice is easy – only *Starmon* is on offer and an excellent product it is too, even if some BBC owners might find its mode 6 format a little restrictive.

I felt a little uncomfortable including *Toolstar*. It's a toolkit and provides a range of powerful commands for you to build up into even more powerful routines and has by far the best and most helpful documentation. Only a third of its utilities are directly concerned with machine code; the rest are for Basic and disc. If you're a keen Basic programmer, have discs and are interested in, but not consumed by machine code, this might be for you.

Spy2 has an even more powerful set of disc related commands readily available to Basic or any other language via

Mach1 and *Kmon* have many similarities and operate in much the same way. *Mach1* is the only 16k monitor in this review, all the others being 8k. It has a marvellous auto-disassembler and now has a full-feature assembler, allowing forward references to undefined labels, and it's the only one which supports the extended 65C02 mnemonic set for the second processor, although not for assembly. *Kmon* strikes me as a cut-down version of *Mach1* with some very nice touches, especially on the assembly side.

Well, there you are, a final thumbnail sketch of each one. No doubt there will be the odd cry of 'foul' and 'we was robbed' from one or two of the authors of these products – all of whom have my admiration. I have tried to be fair and I must stress again that this is simply a collection of my own opinions and prejudices. In the end it's up to you.

3" Micro Disc £59.95 (inc. VAT)

Disc Interface &
Drive
£174.95 inc. VAT)

Micro Disc Drive for
the BBC Micro

The Micro disc drive offers a method of low cost quick access to programs. The drive is essentially a small version of a 5¼" disc drive and offers similar features to the larger drive. The data is stored on a 3" disc, this is enclosed in a protective hard plastic cassette which features a write protect switch. The micro drive requires the standard Acorn disc interface, but a new disc filing system rom. Acorn DFS may be exchanged for the micro DFS for £2.30. The new micro disc filing system can read and write to Acorn DFS discs. Thus if a 5¼ inch and a micro floppy were connected on the same cable files could be transferred between them.
Capacity: 80.64 K bytes **Transfer Rate:** 125k bit/s.

HIGH QUALITY DRIVES AT EVEN LOWER PRICES.

Opus disc drives are the best buys on the market.

We have reduced our prices, but the quality still remains as high as ever.

All our 5¼" drives have been tested to their limits, running for 8,000 hours – that's a year of constant use.

And when you look at our prices, you'll find that VAT, all necessary leads and carriage are included along with a two year guarantee – a year more than any other company can offer.

You can order by posting the coupon below or calling at our showroom.

5¼" SINGLE DISC DRIVES.

- All ½ height.
- Low power consumption.
- Comprehensive manual.
- Direct drive mechanism.
- Free utilities disc.
- Fast access time.

■ **Solidisk 128k** complete with manual and software on 40 track disc. Worth £150, sell at £115 ono. Tel: Graham, 0253 721291 ext 59, business hours.

■ **Acorn Z80** second processor. Complete, unused, unwanted gift. £250. Tel: 01-360 0323.

■ **Written** any educational software? We pay 20% royalties. Send tapes for assessment to QCSOft, 66 Manor Abbey Road, Halesowen, West Midlands, B62 0AB.

■ **Colour** screen dumps. BBC with Tandy CGP115, MCP40, Oric printer. Dump your best graphics in full colour. £3.50. 3 Orchard Gardens, W. Challow, Wantage, Oxon OX12 9TL.

£10 SMALL AD SERVICE

Please include your cheque for £10 made payable to Redwood Publishing. This is the standard fee. Don't forget your name, address or phone number. Send cheque plus form to Acorn User Small Ads, 68 Long Acre, London WC2E 9JH.

Seconds out ...round two?

THE Christmas punch-up between computer chiefs Chris 'King' Curry and Clive 'Beebcrusher' Sinclair has been referred to the Boxing Board of Control (BBC) and the fight declared void.

The reasons are unclear, but it appears the BBC does not consider the Baron of Beef public house an official venue. Nor was the wine bar where round two took place.

200

Also, Clive's use of a rolled-up newspaper in future meetings has been knocked on the head as it was reckoned to be 'a bit below the belt'.

So, King Curry still holds his title as the biggest micro producer in the UK – but Clive is after a rematch and is reckoned still to be ahead of Sugar Ray Amstrad in the UK rankings.

Sources close to promoter Bill Cotton suggest Clive is on course for another crack, possibly at the Blue Boar in Cambridge. Contracts are being negotiated, with several other fights on the bill: Hermann 'The German' Hauser v Nigel 'Naigel' Searle; Guy 'The Mouth' Kewney v Jane 'Ven-detta' Bird and 'Mad' Mac v Tony 'Maggie' Bastaole.

Our boxing correspondent writes: The King's trainer at ABC (Acorn Boxing Co), Smokin' Joe Black, reckons he's in good form, whereas the opposition camp is having trouble getting Clive out of his trike and back to training.

Tom in a huff

OUR PAL Tom Hohenberg (aka Huff 'n Puff, Hamburger, etc) must be getting really fed up.

Abuser started the ball rolling by (deliberately) misspelling his name. Then Guy Kewney and Computer Weekly started.

Now, the ultimate. One of the Acorn directors, no less, writes to him as Tom Hoenburg!

Acorn's 'bull'

ACORN is to launch an X-series machine this year, but it will not be a successor to the BBC micro model C. The X stands for Excommunicator and, as one of the new management counter-productivity tools, is the result of Acorn's tie-up with the govern-

by Itsa Knockout

ment-sponsored Alvey project.

Using the most sophisticated artificial intelligence techniques, the machine can detect which managers are leaky, and censor all potentially sensitive information, a sort of modern 'papal bull'. Independent industry experts believe this machine was the brain behind the Acorn security operation last year which cut leaks down to one major new product a month.

Chris 'n' Chris were unavailable for comment.

Saddled with a micro mountain

WHAT, we ask, is Acorn going to do with all those duff computers dealers are going to be saddled with under the £50 exchange scheme for the BBC micro?

They could always take a look at the cartoon book '101 Things to do with a Dead Computer', but we'd like to hear some ideas from readers on Acorn's micro mountain – prizes for the best three.

We've asked Acorn if the offer will be extended to C5 owners, but the answer was 'What would we do with them?' However, there were some ideas on the EEC's 'wine lake'.

Acorn 'ad' it up

AFTER forking out a claimed £4.5m on advertising over Christmas and selling 200,000 machines (that's £22.50 per micro!) against a target of 300,000 we can quite understand Acorn asking the advertising company Aspect for some of the money back. The only problem is that Aspect has already spent it – on BBC micros.

How 'Boxing News' reported the first Curry v Sinclair match

FOLLOWING in the footsteps of *The Times* with Portfolio, *Acorn User* is doing its bit to encourage readers to follow the Stock Market with Jingleo, or How Much Acorn Directors are Worth. Our table (based on Acorn's company report) enables us to work out how much they earn as the market fluctuates.

For every penny the share price rises, Hermann gains slightly over £½m, and Chris slightly under £½m. At the high of 193p each, Hermann was worth almost £103m, but at 43p his paper fortune dropped to £22m.

Director	Shares	at 193p	at 43p	Change/p
H M Hauser	53,252,851	£102.7m	£22.8m	532,528
C J Curry	43,032,051	£83.0m	£18.5m	£430,320
J W Sutherland	12,500	£24,125	£5375	£125
C J Ward	12,000	£23,160	£5160	£120

Access a world of Information WITH YOUR BBC MICRO

Today, there are literally hundreds of databases worldwide which can be accessed by your BBC micro. These include Prestel, Micronet, Homelink, Telecom Gold, various 'Bulletin Boards' and massive American data bases such as 'The Source' and 'DIALOG'. The equipment can also be used to send telex messages. The Pace range of inexpensive communications products are designed to provide accurate data exchange whilst being extremely flexible and easy to use.

NIGHTINGALE - The Modem

In order to use a versatile modem like Nightingale to its fullest potential, you will require equally sophisticated software. This is where Pace can offer you a total solution — Commstar, unquestionably the most comprehensive communications software available for the BBC. Commstar is currently the only package for the BBC micro which offers easy access to Prestel (and other viewdata services), together with user to user communication and exceptional file transfer capabilities.

Supplied on Eprom, Commstar is instantly accessible, simple to use and extremely flexible. Just look at the possibilities:- access Prestel, Micronet, Viewfax, Homelink and Telecom Gold, rummage through bulletin boards and chat to literally thousands of other computer users, but there's more. Commstar's versatility enables the BBC to be used as an inexpensive work station for a main frame or mini-computer.

The complete Nightingale/Commstar package for the BBC micro including the modem, cabling and the Commstar Eprom and manual is just **£139 plus V.A.T.**

Nightingale is available separately for the BBC and other computers at £119 plus V.A.T. and Commstar is £29.57 plus V.A.T. Further details are available, please telephone or write for comprehensive fact sheets.

Nightingale is by far the most versatile modem available, at the price, for either home or business use. It offers Prestel/Viewdata baud rates (1200/75 & 75/1200) alongside 300/300 baud full duplex for communication between the BBC and other computers, including bulletin boards.

Nightingale has a built-in expansion capability, allowing the addition of auto-answer and auto-dial with battery back-up. The state-of-the-art modem chip technology employed in Nightingale requires minimal support circuitry resulting in low power consumption, low cost, high quality and extreme reliability.

Nightingale being 'hard wired' is not subject to the noise interference errors common to outdated acoustically coupled devices. In addition Nightingale features a simple self-test facility for easy installation.

Nightingale utilises a fully buffered RS 423/232 serial interface and is supplied complete with a lead suitable for connection to the BBC micro, other leads are available on request.

COMMSTAR - The Software

SPECIAL INTRODUCTORY OFFER
For a limited period, when you order the Nightingale modem you will receive discount vouchers entitling you to the following:-

KNOWLEDGE-INDEX
20% discount off standard enrolment fee (normally £25)

This remarkable collection of databases includes over 22,000,000 items covering Agriculture, Books, Business, Electronics and Computing, Corporate and Company News, Education, Engineering, Government Publications, Legal Information, Magazine Articles, Mathematics, Medicine and News/Current Affairs (The enrolment fee also includes 2 hours of free access time).

one to one
50% discount off standard enrolment fee (normally £50)

One to one is an electronic message service designed to give you the communications capabilities of a telex at much lower cost. By using your micro fitted with a Nightingale modem you can produce telexes, letters, reports and contracts, and send them in seconds to any destination. Courier delivery, priority mail and radio paging are also included in this highly efficient communications service.
